PD-ABM-015

FINAL REPORT:

BOLIVIA RADIO LEARNING PROJECT (8/86 - 9/91)
INTERACTIVE RADIO LEARNING (9/91 - 8/93)

SUBMITTED BY:

Michelle L. Fryer
Chief of Party
9/22/93

In 1986, Fe y Alegria (FyA), a Bolivian non-governmental organization (NGO), began testing the feasibility of using a powerful instructional methodology called "interactive radio" to improve the quality of primary-school instruction in mathematics. Technical assistance for the pilot was provided through the Education Development Center (EDC) of Newton, Massachusetts, and funding was contributed by the United States Agency for International Development's overseas mission in Bolivia (USAID/B). Throughout the following year, feasibility studies, needs assessments, and pilot implementation activities challenged the appropriateness of the intervention and Fe y Alegria's role as the lead institution in a country-wide initiative. The dramatic improvement in student learning produced by the initial pilot, however, confirmed both children's readiness to "take off" with the radio instruction and FyA's intellectual and institutional capability of continuing management at the national level. Today, six years after FyA's initial pilot, Bolivia's Ministry of Education and Culture (MEC) has assumed primary responsibility for the Project. More than 300,000 primary-school children have learned mathematics and health through Interactive Radio Learning (IRL) and its predecessor Radio Learning Project (RLP). Radio Math has achieved national recognition as "the official mathematics program" of Bolivia.

This report reviews the state of interactive-radio education in Bolivia. Section I presents the interactive-radio methodology. Sections II and III review key activities undertaken by RLP/IRL in chronological fashion and summarize major accomplishments to date. Sections IV, V, and VI discuss IRL outputs, management, and financing during 1994, the final year of EDC's technical assistance (TA) contract. Section VII closes the main body of the report with some reflections on IRL institutionalization. Major technical and financial documents appended to the body of the report include: Annex 1, Evaluation Summary; Annex 2, Detailed Work Plan 1993, 1994; Annex 3, Scopes of Work; and Annex 4, Revised Budget 1991 - 1995.

I. INTERACTIVE RADIO - METHOD AND EVALUATION.

In 1986, Bolivia became the first country in South America to use interactive radio to improve the quality of primary-school instruction. One of the reasons that this methodology has been so successful in Bolivia is because of the rigorous nature of its instructional design which combines the power of popular media with the psychology of cognitive learning and the science of formative evaluation. Casual observation of Bolivia's interactive-radio classes will most certainly leave the viewer with the impression that the students and the "radio teacher" are engaging in a lively two way conversation. Further inquiry, however, will lead one to discover that interactive-radio is actually a tightly sequenced one-way broadcast which combines the strengths of programmed learning with the familiarity of an old technology--the radio. The five driving principals of interactive radio are: active student participation, sequenced learning, distributed practice, immediate reinforcement, rigorous evaluation and monitoring.

Active Student Participation

Interactive radio is based upon the principal that children learn best when they are actively involved in their own education. On the average, interactive-radio children respond to questions and activities posed by the "radio teacher" every 20 seconds. The nature of that "interaction", however, is driven by the creative energy of the scriptwriter. To date, more than 550 Interactive Radio Math and Health lessons have been validated in Bolivia. The programs, which average 25 minutes in length; each contain songs, games, physical exercises, drill and practice, writing, questions, problem solving, object manipulation, exploration, drawing, role plays, demonstrations, and so on. In this manner, a child's sense of participating in and contributing to their own learning is stimulated by the pace of instruction, rather than dampened through routine. rote practice.

Segmented Learning

Another instructional principal at the cornerstone of the interactive radio methodology is "segmented learning". Cognitive science has demonstrated that young children (and in the case of Bolivia, malnourished children), lack the ability to decode large blocks of information. They learn best when challenged by brief, varied doses of instruction. Because of this, each interactive-radio program presents a menu of five or six brief learning segments, and several entertainment segments to stimulate the body as well as the intellect. The average length of each interactive radio segment is about three minutes. In this way, IRL's mix of instruction and entertainment facilitates children's ability to keep-up with the introduction of new ideas.

Distributed Practice

A third element of the interactive-radio instructional design is that of "distributed practice". In order to maintain a specified level of mastery, students must have ample opportunity to apply both new and old skills. As a result, interactive radio programs are

crafted around a blend of "review and practice" which integrate the practice of mastered skills into the learning of new concepts.

Immediate Reinforcement

All interactive radio programs apply the principle of "immediate reinforcement" or positive modeling to enrich the learning process. Every time the radio teacher presents a question, there follows a precisely timed pause for the students to respond before the radio teacher provides the correct answer. If, by chance, the student responded incorrectly, positive modeling enables the child to reassess their answer and correct their error. Without the immediacy of positive reinforcement, simple errors can become compounded and lead to difficulty in the mastery of more complex algorithms. By the same token, children who answer a question correctly have a right to be rewarded through positive reinforcement. In this way, interactive radio contributes to development of students' sense of achievement and well-being.

Evaluation and Monitoring

IRL has developed an extensive formative evaluation strategy to assess the broadcast quality and content of each lesson. In theory, lessons are pretested to provide the curriculum team with guidelines for adjusting the script prior to the final recording. However in practice, IRL/RLP has not always had the luxury of sufficient time to complete this preliminary step. Once the lesson is produced, a cassette is sent to all participating radio stations, and the actual broadcast is observed by trained supervisors in schools throughout the country. The observations, which are faxed into the central office on a daily basis, provide the curriculum team with valuable insight into student comprehension and teacher management of the methodology. This information, in turn, is used to modify the content of future lessons and to revise the original production at the end of the year.

Short tests are administered on a biweekly basis in mathematics and every six weeks in health to develop a baseline of children's understanding of those key concepts to be introduced in upcoming weeks, to assess children's comprehension of concepts taught over the past evaluation period, and to test children's retention of messages presented over the past three months. The results of these tests are also used to fine-tune the master lesson plan.

Both mathematics and health employ a summative evaluation strategy based upon longitudinal assessment. In mathematics, second-grade children who entered IRL in 1988 were traced through the completion of fifth grade, 1991; and in health, third-grade children who joined IRL in 1993 will be traced through the close of the 1994 school year. In addition, the MEC is evaluating the impact of the revised mathematics programs in La Paz.[1] Significant improvements in student learning of mathematics using

---

[1] Original 2nd grade evaluation was conducted in 1988 in the urban centers of Cochabamba, Santa Cruz, and Trinidad, and in rural Kami.

IRL have been demonstrated at every grade level (Annex 1); but results of the summative evaluation of the health intervention will not be available until early 1994.

In order to determine whether the health concepts learned in school result in positive attitudinal and behavioral changes, local staff are undergoing training in qualitative research methods. Extensive baseline data has been collected reflecting children's understanding and application of key content; and a strategy for a tracer study assessing changes in practices at both the individual and household levels is now being implemented. Training in qualitative research will continue over the course of the next year using an additional 1.5 PM of international TA.

II. INTERACTIVE RADIO INSTRUCTION IN BOLIVIA - A CHRONOLOGY OF EVENTS.

Radio Learning Project: 1986 - 1991.

1986

- Comisión Episcopal de Educación (CEE) reviews the state of Bolivian primary education and recommends that mathematics be improved at all levels. Interactive radio is identified as a potential intervention to address this need.

- At the invitation of USAID/B, EDC conducts a feasibility study to assess the potential of using IRI in Bolivian public schools.

- FyA and EDC receive an USAID/B grant to pilot the use of interactive radio over a three-month period.

1987

- Training of FyA staff participating in second-grade pilot.

- Pilot implemented in FyA schools. Radio intervention significantly increases children's understanding (64% pretest, 90% posttest) of basic concepts taught.[2]

- FyA and EDC collaborate on the design of Radio Learning Project.

- Pretest second-grade control group to establish baseline for future curriculum development activities.

1988

- FyA and EDC contract with PL 480 and USAID/B to provide local and international technical services under RLP. The objectives of the project include: (1) develop and validate a comprehensive interactive-radio mathematics curriculum for lower-primary school; and (2) pilot a first-grade radio-based spanish-language program.

- RLP develops 130 half-hour interactive-radio lessons for daily transmission of second grade mathematics. The series is validated in the Departments of Santa Cruz, Cochabamba, and the Beni. Summative evaluation supports the impact of the radio intervention. (Posttest mean scores: 46% control, 66% experimental.).[3]

[3] Fryer M (1989). ***First Year Summative Evaluation: Second Grade Mathematics, Bolivia 1987-1988.*** Radio Learning Project Monograph. Washington, D.C.: Agency for International Development.

- Teachers request that RLP continue Radio Math through the last year of primary school, fifth grade--even at the cost of sacrificing language to do so. AID modifies RLP's SOW.

1989

- 2nd grade math series is revised using formative and summative evaluation results. New version is broadcast.

- 130 3rd grade Radio Math programs produced and validated using lapped-year design. In addition, cohorts from the Santa Cruz and Cochabamba regions were selected for inclusion in a four-year tracer study. Experimental cohort continues to outscore the control group by nearly a half. (Grade 3 year-end mean scores: 37% control, 55% experimental.) [4] Sucre and Tarija join RLP bringing the total number of participating Departments to five.

- In response to teachers' requests, a three month pilot is undertaken to test the potential of teaching set-theory by interactive-radio. Summative results do not substantiate significant learning gains in students. RLP stands by original decision to include modern math as a teacher-led post-broadcast activity rather than as a "radio" subject.

- Six month pilot initiated to test the feasibility of applying interactive-radio to the teaching of preventive-health care. Funding for this activity was received through a separate USAID/B grant. Summative evaluation indicates highly significant levels of student comprehension as well as implied practice. This pilot is the first effort to teach health by radio anywhere in the world. The results were published in an international journal.[5]

1990

- 3rd grade math series revised using formative and summative evaluation data. The revised series is broadcast in all participating Departments.

[5] Fryer M (1991). ***Health Education through Interactive Radio: A Child-to-Child Project in Bolivia.*** Health Education Quarterly, Vol. 18(1), Spring 1991. New York: John Wiley & Sons.

- The 4th grade series, consisting of 135 lessons, is validated using year-long formative, summative, and longitudinal methodologies. Results produce outstanding gains. Experimental cohort's scores nearly double those of children taught by traditional methods.[6] This is the first successful effort of any country to teach upper-primary school mathematics by interactive radio.

- The Ministry of Education and Culture signs a Memorandum of Understanding with RLP to broadcast the 2nd, 3rd, and 4th grade programs in six Departments, including Pando. The MEC conducts a separate assessment of their own institutional capability to integrate and supervise interactive radio as part of the official Bolivian curriculum.

- An external cost-effectiveness study of RLP concludes that the annual recurrent cost of using interactive-radio is just $0.81 per student, and the incremental gain in learning equal to 1 1/2 times that of traditional instruction.[7]

1991

- Bolivia becomes the first country in the world to develop a fifth-grade mathematics curriculum using interactive radio.

- The complete series of 135 lessons is validated through a regimen of bi-weekly testing and through summative and formative measures. Summative evaluation data indicate that radio students have greater dominion of basic mathematics principles than non-radio students. (Standardized posttest mean scores: 40% control, 55% experimental). In addition, the project demonstrated that children who had the benefit of all four years of radio instruction have an even greater advantage in mathematics than children who have three years or less (71%).[8]

- Formative and summative evaluation results used to revise the 4th grade math series. The revised programs are broadcast in six Departments along with the updated 2nd and 3rd grade curricula, and the new fifth-grade programs.

[7] Jamison DT, Fryer M, Barron de Luna B, Oros Mendez E (1991)

[8] See Annex 1.

Interactive Radio Learning: 1991 - 1996.

1991

- USAID, EDC, the MEC, and the Ministry of Health (MOH) sign a bilateral agreement to implement Interactive Radio Learning (IRL). The objectives of this landmark initiative are to: (1) integrate Radio Math into the Bolivian curriculum, and extend its diffusion to all 9 Bolivian Departments; (2) develop and pilot a complete "Radio Health" curriculum for children in grades 3 - 5; and (3) strengthen the MEC's ability to manage continued implementation of IRL upon termination of USAID/B funding.

- MEC assumes national supervision of IRL and passes a Ministerial Resolution declaring interactive radio the "official mathematics program" of Bolivia.

- La Paz becomes the 7th Department to join IRL. All four grades of validated mathematics curriculum is broadcast.

- A KAP survey is conducted to establish a baseline for Radio Health curriculum development. A pilot module on cholera is broadcast and evaluated in the Departments of La Paz, Cochabamba, and Santa Cruz. Results of the evaluation confirm the power of using interactive radio to teach basic health concepts and to motivate behavior change.[9]

1993

- The complete mathematics curriculum is disseminated throughout all 9 Departments in Bolivia.

- The complete 3rd and 4th grade Radio Health series is produced and, as of this writing, under validation. Demand for Radio Health is tenfold more than anticipated!

- Michelle Fryer resigns as Chief of Party. IRL's management plan is restructured.

- An international congress promoting Bolivia's pioneering efforts in mathematics and health will be held in Santa Cruz, October 1993.

1994 - 1996

- MEC assumes full implementation responsibility for IRL. Project is integrated into the National Education Reform Act.

---

[9] See Annex 1.

III. RLP/IRL SUMMARY OUTPUTS: 1986 - 1993

In 1993, Interactive Radio Learning reached several milestones in its development. These achievements include...

9a

QUANTITATIVE INDICATOR/OUTPUT	EOP PLANNED	ACHIEVED TO DATE[1]	% COMPLETE
RADIO MATH USAGE IN ALL 9 DEPARTMENTS	9 DPTOS	9 DPTOS	100%
RADIO HEALTH CURRICULUM VALIDATED IN 20 SCHOOLS IN 3 DEPARTMENTS	3 DPTOS 20 SCHLS	4 DPTOS 200 SCHLS	133% 1000%
NATIONAL INFRASTRUCTURE OF TRAINED TEACHERS, SCHOOL DIRECTORS, AND SUPERVISORS	7,500 TRAINED	8,000 TRAINED	107%
MATH STUDENTS (CUMULATIVE)	150,000	300,000	207%
HEALTH STUDENTS (CUMULATIVE)	50,000	60,000	120%
TEACHERS GUIDES - MATH	4 GRADES	4 GRADES	100%
TEACHERS GUIDES - HEALTH	3 GRADES	2 GRADES	66%
MATH LESSONS PRODUCED/REVISED	540	540	100%
HEALTH LESSONS DEVELOPED			
CHOLERA PILOT - 1992	10	10	100%
GRADE 3 - 1993	30	30	100%
GRADE 4 - 1993	30	30	100%
GRADE 5 - 1994	30		0%
CUENTOS FOR SCHOOL BREAK	20	11	55%
BILINGUAL PILOT - 1994	10		0%
BOLIVIAN TECHNICIANS TRAINED	20	40	200%
PROMOTIONAL VIDEO TAPES	5	1	20%

[1] ESTIMATE, SUBJECT TO MODIFICATION.

IV. PLANNED OUTPUTS: FY94

In terms of the EOP Indicators and Outputs proposed by the Mission to assess IRL progress, major activities to be concluded during FY94 include:

Radio Health: Develop and Validate Fifth-Grade Curriculum and Corresponding Teachers' Guide. (August 1993 -December 1994)

Ann Fitzgerald, IRL's Health Educator, is presently working with PARI's curriculum team to identify content for the fifth-grade curriculum. Articulation of the corresponding master plan will follow. Both tasks should be complete by October 1993, and actual script writing will follow, beginning November. If the curriculum teams are able to maintain the rhythm that they have established in developing the 3rd and 4th grade series this year (20 weeks per team per series), development of the fifth-grade program will take one team through March, 1994. At the same time, the second team will engineer the revision of the 3rd and 4th grade curricula now being piloted. Validation of the newly developed fifth-grade curriculum and of the revised third and fourth grade curricula will be ongoing throughout the 1994 school year.

Radio Health: Community Application. (March 1994 - October 1994)

In response to parents' interest in Radio Health, EDC's Chief of Party and key Project staff will collaborate informally with local PVOs working in community health to identify ways that community-health promoters might integrate the existing interactive-radio health curriculum into ongoing educational outreach activities for adults and out-of-school youth. The impact of the materials and the appropriateness of using children's programming for community education will be assessed by the collaborating PVOs using an evaluation instrument developed jointly with IRL.

Public Relations: Media Production. (September 1993 - April 1994)

Four videos of between 10 and 20 minutes each will be competed and subcontracted with a local production house. Two of the videos will be of broadcast quality and provide adult viewers (parents) with an overview of how interactive radio is used to teach mathematics and health in the classroom. They will also present suggestions on how parents can work with their children at home to reinforce the instructional messages. A third video will target international authorities in education and health and provide them with the information that they need to make policy-level decisions about national investments in interactive radio. The fourth video will be a customized training piece that can be used to reinforce role-play and provoke problem solving in future IRL teacher training events.

Radio Math: Revision of the Mathematics Teachers' Guides. (September 1993 -February 1994)

In February 1992, the first cohort to complete the four-year primary-school Radio Math curriculum entered intermediate school. Although IRL does not trace graduates

of the program, feedback gleaned from informal discussions with teachers indicates that while secondary teachers are generally satisfied with the level of mastery achieved by interactive-radio students in the four basic operations of addition, subtraction, multiplication, and division; but they are concerned about their dominion of modern math (set-theory). In addition, apprehension was also expressed about both interactive radio and traditional students' comprehension in the more abstract areas of geometry and fractions. As mentioned earlier in this report, modern math is not targeted by IRL for inclusion in the daily half-hour radio class. Neither is the more complex topic of geometry. Both of these subjects are left to the discretion of the classroom teacher for inclusion during the 15 minute post-broadcast session; and modules for presenting and intensifying these topics are included in IRL's teachers' guide. Fractions, on the otherhand, are taught largely through the radio.

For some time, IRL has been concerned about teachers' commitment to completing suggested post-broadcast activities. In the past, when IRL observers have asked teachers to identify obstacles to carrying-out the post-broadcast session, they have responded: (1) modern math is not a priority; (2) the (geometry) modules are hard to use; (3) their students respond so well to the radio that there is no need to engage in post-broadcast activities; and (4) they cannot put any more time into math given the competing priorities of a limited (four-hour) school day.

In response to the above, IRL plans to revise all math teachers' guides for reprint and distribution in 1994. Post-broadcast content will not be included in the teachers' guides as separate modules, but rather integrated into the guide's daily lesson plans. A master plan for modern math will now be developed and suggestions for specific teacher-led activities will also be included in the daily lesson plans. The existing master plan for fractions will be reviewed, as will the post-broadcast design for numeration and decimals.

Although revision of the Radio Mathematics teachers' guide was not originally included in EDC's TA budget, it is of priority importance and can be managed by an internal, no-cost adjustment. Furthermore, given the fact that these criticisms are beginning to surface in different Departments, we must take immediate action to improve the Ministry's position prior to start of the 1994 school year. If this is not done, what is now a minor flaw in the overall package could potentially undermine future MEC efforts to consolidate wide-spread teacher support for integrating IRL into the national education reform package. On the other hand, if we are able to strengthen teacher acceptance of IRL through the revision of existing print materials, then IRL will contribute to long-term MEC management.

NRECA Solar Energy Collaboration. (October 1992 - June 1994)

In FY 1993, with previous Mission approval, EDC and PER entered into a collaborative agreement with the National Rural Electrification Cooperative Association (NRECA) to assess the potential cost-effectiveness of using renewable energy to power classroom radios as an alternative to electricity and conventional throw-away batteries. Under the terms of the signed Memorandum of Understanding, NRECA is responsible

for the design, procurement, and installation of an appropriate solar-charged system; and IRL is responsible for monitoring usage of the installed panels. Unfortunately, delays associated with the design and procurement of a system matching IRL needs have contributed to a late start-up. As of this writing, NRECA anticipates receipt of the prototype units in September, 1993. Once in country, all units will be reviewed and inventoried by NRECA prior to delivery and installation in IRL schools. Given the projected October closing of the present school year, it is recommended that installation of the pilot solar units be scheduled to coincide with the start of the 1994 school year (February 1994). If this is agreed upon, NRECA and IRL could then collaborate in a preliminary cost-effectiveness study to assess potential future expansion of the pilot system mid-year, June 1994. If the system is found to be in good working order by NRECA's technicians and perceived to be of value by participating IRL teachers, NRECA will contemplate installation of small renewable systems in all remaining Project schools (approximately 3500) under a separate grant agreement with PER.

Bilingual Adaptation of Selected Health Programs. (March 1994 - October 1994)

Once the fifth-grade Radio Health series is complete, the curriculum department will dedicate the remaining school year to developing an appropriate model for adapting the content of a selected health module to the needs and context of indigenous-language speakers. The adapted module will be evaluated to determine whether the bilingual programming produces significantly improved student learning among students whose native language is other than spanish. A second objective is to assess whether indigenous students have the requisite spanish-language capacity in third or fourth grade to comprehend a spanish-language program, given their immersion in spanish-language instruction since first grade. The results of this pilot should prove insightful in determining whether additional investment in developing bilingual programming is justified in terms of cost-benefit. Given the fluency of PARI's Cochabamba staff in Quechua, responsibility for this pilot will most likely be given to the regional office. In addition, EDC will appropriate twelve additional PM of local expertise and two months of international TA to collaborate in development of the bilingual model. Application of the pilot will be by cassette in five to 10 classrooms in the Cochabamba region during the second semester of the 1994 school year. It should also be mentioned that initiation of this effort is dependent upon receipt of the final tranche of TA funding by March 1994.

Master Teacher Training. (April 1994 - June 1994)

Originally, IRL had proposed providing 300 Radio Health teachers with comprehensive first-aid kits and additional training in their use. The objective of this activity was to extend access to basic primary health-care and information to communities that would not otherwise be served. Recent discussions between the MEC and IRL concluded, however, that given competing demands, neither the Ministry of Education nor the Ministry of Health would be able to guarantee continued support for the proposed school-based health promoter model once international donor assistance ended.

As a result, we have changed the focus of Pilot 3 to emphasize the training of Master Teachers (faculty) in Bolivia's Normal Schools. Once the Master Teachers have been trained, they will be expected to integrate the training into the core teacher-training curriculum. In essence, IRL hopes to create a sustainable "teacher training model" that will increase the number of teachers who have basic training in interactive-radio while reducing the burden of future in-service training for the MEC. In addition, we hope that integration of the interactive radio methodology in the Normal school curriculum will promote both legitimacy and acceptance of IRL through formal association--particularly since the lion's share of graduates who specialize in urban primary education will use interactive-radio in their first placement.

Two-Way Radio Pilot: Improving MEC Management (1994)

The two-way radio (TWR) pilot was originally designed to extend educational outreach into the rural sector through an extensive two-way radio network. It is now apparant that the MEC will not be able to continue financing extended TWR diffusion. On the otherhand, a steady reliable avenue of communication such as TWR could greatly enhance Ministry supervision of remote IRL sites. In response to MEC concerns about present and future management of IRL, we have redefined the orientation and output of Pilot 4, as above.

The objective of this pilot is to assess the impact of regular two-way radio communication on the efficiency of overall MEC administration and supervision of IRL. Under this pilot, 20 of the Ministry's most isolated supervisors will be provided with TWRs and trained in their use and maintenance. Call times will be established for weekly and emergency communication between the central office and the field sites, as well as among the supervisors themselves. Overall impact will be evaluated through user logs in four functional categories--management, administration, overall morale, and education/information.

V. *PROJECT MANAGEMENT: FY94*

Given my September departure, IRL's achievements to date, and our present challenges, I see not only a shift in personnel, but a redefinition of management responsibilities as follows:

- Ann Fitzgerald's promotion to COP, responsible for the technical direction of Radio Health, overall Project administration including management of EDC's local subcontracts, coordination of international TA, and donor coordination.

- Emilio Oros's promotion to Executive Director of PARI, responsible for managing implementation all IRL components, directing IRL's institutionalization effort, supervising IRL's regional offices, coordinating field implementation, and managing local TA.

  - Creation of the position Deputy Chief, IRL, to manage stateside administration and logistical support. Dolores Alvino possesses the ideal qualifications for this task, however her present employment as LEARNTECH's Associate Director for Administration implies that Mike Laflin, LEARNTECH's Director, will need to seriously consider if Dolores's present responsibilities can be delegated to someone else; or if, indeed, he is even willing to release her from her pivotal role within the larger project.

Chief of Party: Ann Fitzgerald

Over the past year, Ann Fitzgerald has done an excellent job in managing the development of Radio Health's third and fourth grade curriculum. At this point, she has established herself solidly as counterpart to the curriculum division's chief; and her decision-making authority within the health component is respected by the project's technical staff, PER's executive committee, and our ministry counterparts. When I have been away from La Paz on TDY, Ann has demonstrated her eagerness and ability to assume key management tasks; and her previous experience in public relations and health promotion is critical to guiding PARI's future work in community health and media promotion. It is therefore recommended that Ann Fitzgerald replace me as the EDC Chief of party. Given the progress that Ann has made in advancing the Radio Health curriculum, it won't be necessary to replace her with a second long-term advisor. The strides that she has made in her work will enable the curriculum team to advance the scripting of Radio Health under minimal supervision, while freeing Ann to assume broader management responsibilities.

Executive Director: Emilio Oros

As Director of Programma de Educación por Radio (PER), Emilio has demonstrated diplomacy and tenacity in providing local direction to IRL. He has positioned himself and his institution solidly as the ministry's local counterpart, and speaks with understanding and authority about technical and managerial concerns. Emilio has played a pivotal role in IRL's local success, and is poised to assume the final,

critical responsibility of IRL's institutionalization. It is widely understood that Bolivians respond openly and positively to their local peers. Thus, our strategy of working with teachers' unions to achieve institutionalization outside of the MEC requires that Emilio receive national project authority. To gain access to the inner circles of decision-makers and opinion leaders, Emilio must be recognized as IRL's Executive Director. Otherwise, he may not be taken seriously as a decision-maker; and the project's identify as a Bolivian intervention could be questioned.

Deputy Chief: Dolores Alvino

Projects of the size and scope of Bolivia frequently have a paid home-office staff; but in IRL's case, EDC's multiplier generates home-office support for all LEARNTECH activities, not just for Bolivia. Given the complexity of our project and the present transition in management, IRL has reached a point in its development where we need dedicated backstopping funded through a permanent earmark within IRL's generated multiplier.

I anticipate IRL's demand for stateside support in logistical management and overall administration to increase sharply during this next year given the change in project leadership and the closure of field activities. Since 1987, Dolores Alvino, LEARNTECH Project's Associate Director for Administration, has provided Stateside coordination for Bolivia among her many other responsibilities. She is highly motivated, extremely reliable, and has established excellent working relationships with Ann and Emilio. Her proximity to EDC officers at the company's administrative locus has ensured smooth coordination, and the relationships that she has cultivated with her counterparts in the AID/W contracts office have been advantageous for Bolivia. Dolores is the only LEARNTECH employee with more than a year's project involvement, and her institutional memory will be critical for Ann in her new role as COP. Dolores is the only LEARNTECH representative based in Newton.

In June of this year, I proposed the above reorganization to USAID/B, AID/W, and EDC; and it was formally approved by all three agencies in August. (Scopes of work are included in Annex 3.) During this three-month period, I worked closely with Emilio, Ann, and Jorge Ayala, our MEC counterpart, to ensure a smooth transition in management. Our first task was to revise the 1993-94 workplan (Annex 2) given specific implementation and funding considerations presented in Section VI. Other activities included articulation of IRL's institutional strategy (Section VII.), development of a revised TA budget through 12/94 (Annex 4), and Ann's orientation to AID and EDC standards of project management.

Without a doubt, one reason I am viewed as a good COP in Bolivia is because of the quality of the technical guidance and administrative support that I receive from EDC. That same level of support will now be directed towards making certain that Emilio and Ann have the information and training they need to make informed decisions and provide strong direction.

Continuity on the technical side will be maintained by Mike Laflin, LEARNTECH Director. Throughout Mike's tenure at EDC and with LEARNTECH, he has maintained an open door policy to providing advice and guidance to IRL; and the benefit of his experience has had, and will continue to have, a profound impact on the project. Mike's professional network ensures IRL access to the most qualified selection of consultants; and his commitment to developing a solid institutional base for continued IRL activities will contribute to a positive outcome.

VI. EXTENSION OF IRL'S PACD.

EDC's contract to provide technical services to IRL terminates on 10/30/94; however, we have recently learned that the 1994 school year will not end until November of that same year--making it impossible for EDC to complete validation of the fifth-grade Radio Health curriculum as per our original SOW. Rather than compromise the technical quality of future IRL activities, EDC will request that AID/W extend the PACD for TA services at no additional cost to the Mission. Note: the attached workplan and revised budget have been projected through the close of the 1994 calendar year; however a PACD of March 1995 would be desirable, should there be any delay associated with the final, complete obligation of funds.

VII. INSTITUTIONALIZATION OF IRL.

The final, and perhaps most important objective of IRL is development of the MEC's managerial capacity to sustain national implementation in the long-term. With this in mind, IRL has worked closely with the MEC to establish a national infrastructure of trained IRL supervisors, and to strengthen MEC management of the same. Today, the Ministry has 20 trained field supervisors, five regional coordinators, and one national director as counterpart to IRL. Next year they will dedicate land to construct permanent Project offices.

In 1992, Radio Math was declared the "official" primary-school mathematics program by ministerial resolution. To the extent that the Ministry has integrated the curricula into the national syllabus and dedicated personnel to IRL, we have succeeded in our efforts at institutionalization. The fact remains, however, that we have not yet reached full compliance with the resolution, and long-range funding requires long-term planning. Unless IRL is able to go beyond project status and become fully incorporated in the future educational reform, it may loose its present momentum. Given these objectives, the following tasks remain to be done:

- Maintain an open and continuing dialogue with MEC authorities at the national, Departmental, and regional levels regarding IRL activities and achievements.

- Establish regular coordination with the authors of Bolivia's educational reform, ETARE, and the Consejo Nacional de Educación. One possibility might be to second an IRL expert to ETARE for up to six months, to explore possible avenues of support under the new reform package.

- Cultivate broad-based support for institutionalization by coordinating outreach with the teachers' unions and the teacher training colleges.

- Develop public awareness of IRL through social marketing and mass-media campaigns.

To aid MEC efforts in institutionalizing IRL, short-term TA in institutional development, economics, social marketing, and public relations are included in the revised budget.

Strengthening local institutions.

One element of IRL's success to date has been our dual approach to institutionalization. Given the frequent change of personnel within the ministry, IRL fostered the development of long-term technical and managerial expertise within the private sector. Today, the team of specialists that I began training six years ago, have matured, formed their own NGO, and are acknowledged as country and regional authorities in radio education. The transfer of technology in instructional systems design and project management is now complete, and PER is well-positioned to continue providing Bolivia's Ministry of Education and Culture with constancy and

continuity through local expertise. Thus, as part of our TA plan, EDC has earmarked funds for short-term expertise to continue strengthening PER's institutional viability.

DETAILED WORK PLAN

1993 - 1994

PLAN ANUAL DE TRABAJO 1993

AÑO 1993	DIRECTORIO-MEC/PER/EDC	EQUIPO PEDAGOGICO	EQUIPO RADIO	EQUIPO IMPLEMENTACION E EVALUACION	TRANSMISION	ASESORIA TECNICA
ENERO	- PLANIFICAR TRABAJO DE LOS EQUIPOS TECNICOS - ENTREGAR PLAN ANUAL DE IMPLEMENTACION A USAID/DIFEM - SUPERVISAR LOS EQUIPOS TECNICOS - CONTACTOS CON ETARE - REUNION GENERAL CON LOS COORDINADORES DPTOS - CONCURSO DE PRENSA: GUIONISTAS, SUPERVISORES, SALUBRISTA, RADIO EMISORAS - NEGOCIAR CONTRACTOS: EDC/PER, EDC/FYA, RADIOEMISORAS, PERSONAL - APROBAR CRONOGRAMA Y CONTENIDOS DE LA CAPACITACION DE MAESTROS	- PRESENTACION DEL PLAN MAESTRO DE 3ro Y 4to SALUD - REORGANIZACION DE RESPONSIBILIDADES	- REPONER LECCIONES MATEMATICAS QUE TUVIERON ERRORS GESTION 1992 - REGRABAR RADIODRAMAS 2do MATEMATICAS, COPIAR POR MAYOR DISTRIBUCION	- ELABORAR CONTENIDO, METODOLOGIA, Y CRONOGRAMA DE CAPACITACION DE MAESTROS, GESTION 1993 - ANALIZAR RESULTADOS DE SALUD Y MATEMATICAS GESTION 1992 - TALLER SOBRE LA ELABORACION DE PRUEBAS - ELABORAR PRUEBA SUMATIVA, 3ro Y 4to SALUD - SUPERVISION/COORDINACION REGIONAL		
FEBRERO	- SUPERVISAR LOS EQUIPOS TECNICOS - COLABORAR EN LA CAPACITACION DE MAESTROS, MATEMATICAS - SUPERVISION NACIONAL	- APOYO EN LA CAPACITACION DE MAESTROS - MATEMATICAS - RECOLECTAR DATOS DE BASE SALUD. - GUIONIZACION DE LAS LECCIONES 1 Y 2 DE SALUD, 3ro Y 4to CURSOS. - PREPRUEBA Y REVISION DE LAS LECCIONES DE SALUD	- REGRABACION RADIODRAMAS DE 2do MATEMATICAS, COPIAR POR MAYOR DISTRIBUCION - GRABAR EN FORMA PRELIMINARIO Y FINAL LECCIONES 1 Y 2 DE SALUD, 3ro Y 4to. COPIR POR MAYOR DISTRIBUCION	- CAPACITAR MAESTROS DE ACUERDO A CRONOGRAMA - MATEMATICAS - ELABORAR ESTRATEGIAS DE ANALISIS Y EVALUATION EN SALUD - PROBAR EL INSTRUMENTO DE EVALUACION SUMMATIVA, SALUD		EXPERTO EN LA ELABORACION DE PRUEBAS
MARZO	- SUPERVISAR LOS EQUIPOS TECNICOS - PLANIFICAR 1er CONGRESO INTL PARI, DCA - SUPERVISION NACIONAL - ELABORAR SAR/ACCRUALS - COLABORAR EN LA CAPACITACION DE MAESTROS, MATEMATICAS Y SALUD	- APOYO EN LA CAPACITACION DE MAESTROS - MATEMATICAS, SALUD - GUIONIZACION DE LAS LECCIONES 3 AL 6 DE SALUD, 3RO Y 4TO CURSOS - PREPRUEBA Y REVISION DE LAS LECCIONES DE SALUD	- CONCLUSION RADIODRAMAS 2do. COPIAS - GRABAR EN FORMA PRELIMINARIO Y FINAL LECCIONES 3 AL 6 DE SALUD, 3RO Y 4TO - COPIAR POR MAYOR DISTRIBUCION	- CAPACITAR MAESTROS DE ACUERDO A CRONOGRAMA - MATEMATICAS Y SALUD - PREPRUEBA, LECCIONES 3 AL 6 DE SALUD 3ro Y 4to - EVALUACION FORMATIVA MATEMATICAS - ADMINISTRACION DE PRETESTS - MATEMATICAS Y SALUD - TALLER EN EVALUACION CUALITATIVA	- INICIAR EMISIONES RADIALES DE MATEMATICAS, 2do AL 5to GRADO	EXPERTO EN EVALUACION CUALITATIVO

AÑO 1993	DIRECTORIO - MEC/PER/EDC	EQUIPO PEDAGOGICO	EQUIPO RADIO	EQUIPO IMPLEMENTACION E EVALUACION	TRANSMISION	ASESORIA TECNICA
A B R I L	- SUPERVISAR LOS EQUIPOS TECNICOS - 1er CONGRESO INTERNACIONAL PARI, DCA - SUPERVISION NACIONAL - TALLER EN EL USO DEL IRI PARA ENSEÑAR EDUCACION AMBIENTAL, COSTA RICA	- APOYO EN LA CAPACITACION DE MAESTROS - SALUD - GUIONIZACION DE LAS LECCIONES 7 AL 10 DE SALUD, 3RO Y 4to - PREPRUEBA Y REVISION DE LAS LECCIONES DE SALUD	- GRABAR EN FORMA PRELIMINARIO Y FINAL LECCIONES 7 AL 10 DE SALUD, 3ro Y 4to - GRABAR CUENTOS - COPIAR POR MAYOR DISTRIBUCION	- CAPACITAR MAESTROS DE SALUD - PREPRUEBA, LECCIONES 7 AL 10, SALUD 3ro Y 4to - EVAL FORMATIVA - MATEMATICAS Y SALUD - ANALIZAR PRETEST SALUD 3ro Y 4to - ANALIZAR PRETEST, MATEMATICAS - ACTUALIZAR DE DATOS ESTADISTICOS - SUPERVISION/COORDINACION REGIONAL	- CONTINUAR EMISIONES DE MATEMATICAS 2do AL 5to GRADO - INICIAR EMISIONES RADIALES DE SALUD, 3RO Y 4TO	
M A Y O	- SUPERVISAR LOS EQUIPOS TECNICOS - SUPERVISION NACIONAL - PLANIFICACION DEL CONVIVENCIA LPB CON AUTORIDADES EDUCATIVAS - COLABORACION CON PLANAMIENTO DEL MEC EN EVALUAR 2DO MATEMATICAS - REUNION GENERAL CON LOS COORDINADORES DPTOS	- GUIONIZACION DE LAS LECCIONES 11 AL 14, 3RO Y 4TO SALUD - PREPRUEBA Y REVISION DE LAS LECCIONES DE SALUD	- GRABAR EN FORMA PRELIMINARIO Y FINAL LECCIONES 11 AL 14 DE SALUD, 3RO Y 4TO - CONCLUIR LA GRABACION DE LOS CUENTOS - COPIAR POR MAYOR DISTRIBUCION	- PREPRUEBA, LECCIONES 11 AL 14, SALUD 3RO Y 4TO - EVAL FORMATIVA - MATEMATICAS Y SALUD - ACTUALIZAR DE DATOS ESTADISTICOS - SUPERVISION Y COORDINACION REGIONAL - FINALIZAR ANALISS DE PRETEST, SALUD Y MATEMATICAS - CONTINUAR CON EL TALLER DE EVALUACION CUALITATIVA - COLABORAR CON LA OFICINA DE PLANAMIENTO DEL MEC EN EVALUAR 2DO MATEMATICAS	- CONTINUAR EMISIONES DE MATEMATICAS 2DO AL 5TO Y DE SALUD, 3RO Y 4TO	EXPERTO EN EVALUACION CUALITATIVA
J U N I O	- SUPERVISAR LOS EQUIPOS TECNICOS - SUPERVISION NACIONAL - CONVIVENCIA LPB, AUTORIDADES EDUCATIVAS - MANDAR DELEGACION AL CONGRESO ANUAL DEL NCIH - REDEFINIR RESPONSIBILIDADES DEL DIRECTORIO DEBIDO AL SALIDA DEL COP/EDC - TRANSICION/CAPACITACION COP/EDC - COLABORAR CON PLANAMIENTO (MEC) EN EVALUAR 2DO MATEMATICAS - ACCRUALS	- GUIONIZAR LECCIONES 15 AL 18, 3RO Y 4TO SALUD - PREPRUEBA Y REVISION DE LAS LECCIONES DE SALUD	- GRABAR EN FORMA PRELIMINARIO Y FINAL LECCIONES 15 AL 18 DE SALUD, 3RO Y 4TO - COPIAR POR MAYOR DISTRIBUCION	- PREPRUEBA, LECCIONES 15 AL 18 DE SALUD, 3RO Y 4TO - EVAL FORMATIVA - MATEMATICAS Y SALUD - SUPERVISION Y COORDINACION REGIONAL - RECOLECTAR DATOS PRELIMINARIOS, INVESTIGACION CUALITATIVA - COLABORAR CON LA OFICINA DE PLANAMENTO DEL MEC EN EVALUAR 2DO MATEMATICAS - PARTICIPAR EN LA REUNION NACIONAL DE AUTORIDADES EDUCATIVAS	- CONTINUAR EMISIONES DE MATEMATICAS 2DO AL 5TO Y DE SALUD, 3RO Y 4TO	

76

AÑO 1993	DIRECTORIO - MEC/PER/EDC	EQUIPO PEDAGOGICO	EQUIPO RADIO	EQUIPO IMPLEMENTACION E EVALUACION	TRANSMISION	ASESORIA TECNICA
JULIO	- SUPERVISAR LOS EQUIPOS TECNICOS - SUPERVISION NACIONAL - CONTINUAR CON LA REORGANIZACION DEL DIRECTORIO - ACTUALIZAR PLAN DE IMPLEMENTACION 1993 - REVISAR OBJECTIVOS Y PLANIFICAR ACTIVIDADES DEL PARI, 1994 - COLABORAR EN LA EVALUACION DEL UTP - VISITA DE SUPERVISION HOXENG, AID/RAD/ED - TRANSICION/CAPACITACION COP/EDC - PLANIFICAR 1ER CONGRESO NACIONAL DE AUTORIDADES EDUCATIVAS, CEBA - REDEFINIR COMITE NACIONAL DEL PARI - PRIMEROS CONTACTOS CON AUTORIDADES EDUCATIVAS DEL COMITE NACIONAL DEL PARI	- GUIONIZAR LECCIONES 19 AL 22, 3RO Y 4TO SALUD - PREPRUEBA Y REVISION DE LAS LECCIONES DE SALUD - CONTINUACION DE CAPACITACION EN EVALUACION CUALITATIVA - ELABORAR ESTRATEGIA PARA ENTREVISTAS Y OBSERVACIONES DE CASA, EVALUACION CUALITATIVA	- GRABAR EN FORMA PRELIMINARIO Y FINAL LECCIONES 19 AL 22 DE SALUD, 3RO Y 4TO - COPIAR POR MAYOR DISTRIBUCION	- PREPRUEBA, LECCIONES 19 AL 22 DE SALUD, 3RO Y 4TO - EVAL FORMATIVA - MATEMATICAS Y SALUD - SUPERVISION Y COORDINACION REGIONAL - CONTINUAR TALLER DE EVALUACION CUALITATIVA. ELABORAR ESTRATEGIA DE SEGUIMIENTO CON PADRES PARA LA INVESTIGACION CUALITATIVA, SALUD 4TO Y 5TO. ANALIZAR LOS DATOS PRELIMINARIOS.	- CONTINUAR EMISIONES DE MATEMATICAS, 2DO AL 5TO Y DE SALUD 3RO Y 4TO	- EXPERTO EN EVALUACION QUALITATIVA - ASISTANTE EN ESTUDIOS SOCIO-DEMOGRAFICO
AGOSTO	- SUPERVISAR LOS EQUIPOS TECNICOS - SUPERVISION NACIONAL - CONCLUIR REORGANIZACION DEL DIRECTORIO - APROBAR PARI PLAN DE IMPLEMENTACION, 1994 - CONCLUIR TRANSICION/CAPACITACION COP - CONTINUAR CON LA PLANIFICACION DEL 1ER CONGRESO NACIONAL DE AUTORIDADES, CEBA - COORDINACION DPTO. ANNEX 3

SCOPES OF WORK

CHIEF OF PARTY

The COP will supervise all technical assistance provided by the Contractor, manage the Contractor's accounts, liaison with USAID and other official entities. The COP will work as technical counterpart to the MEC National Coordinator and IRL's Executive Director. Her principal responsibilities include: 1) the technical direction of Radio Health, 2) overall Project administration including management of EDC's local subcontracts, 3) coordination of international TA, and 4) donor coordination. Specifically, the COP will:

- identify local TA needs, and manage the work of all consultants provided by the Contract;
- supervise the technical output of all activities related to the evaluation and production of Radio Health;
- develop a detailed implementation plan for IRL through September 1994, in collaboration with IRL's Executive Director and the MEC National Coordinator; oversee implementation of the same;
- work with IRL's Executive Director and the MEC National Coordinator to develop long-range plans and procedural models for national implementation of IRL and its related institutionalization;
- coordinate the long-term professional development of Project staff;
- coordinate project activities with IRL's AID Project Manager, participate in internal and external reviews of IRL with AID;
- represent the work of the Project as appropriate, through professional publication and conference presentations;
- develop and implement a media-based public-relations strategy to promote IRL activities at the national and community levels;
- prepare semi-annual reports for the Mission on project management and implementation; prepare a final report.

IRL EXECUTIVE DIRECTOR

IRL's Executive Director will supervise all project implementation activities and liaison with the USAID Mission and other official entities. The Executive Director will represent the work of IRL's consortium at the national and international level, and work as counterpart to the MEC National Coordinator and EDC's COP. His principal responsibilities include: 1) directing IRL's institutional effort, 2) supervising IRL's regional offices, 3) coordinating field implementation, and 4) managing local TA. Specifically, the Executive Director will:

- work with the COP to identify TA needs;
- supervise the implementation and output of all project components;
- develop a detailed implementation plan for IRL through September 1994, in collaboration with the EDC COP and the MEC National Coordinator, oversee implementation of the same;
- work with EDC's COP and the MEC National Coordinator to develop long-range plans and procedural models for national implementation of IRL;
- develop a strategy for integrating IRL into the education reform package, promote institutionalization of IRL by integrating project research into policy dialogue at the highest levels, provide the MEC with the necessary technical and financial analyses needed to determine the feasibility of long-term sustainability, coordinate union support for institutionalization;
- establish a national advisory panel to aid IRL's institutionalization;
- coordinate the long-term professional development of Project staff;
- participate in internal and external reviews of The Project with USAID and GOB entities;
- represent the work of the Project through professional publication and conference presentations; promote Project activities through consultancies, as appropriate;
- prepare monthly reports for EDC on project management and implementation, prepare a final report of IRL in 1994;
- collaborate with the MEC National Coordinator in establishing a national infrastructure of trained teachers and supervisors in interactive radio.

DEPUTY CHIEF

The Deputy Chief will work under the supervision of the EDC COP and administer IRL's stateside activities. The Deputy Chief's main areas of responsibility are contractual, administrative, and fiscal management, as follows:

- o liaison with the AID/R&D/ED Chief Technical Officer (CTO) and the LEARNTECH Contracts Officer;
- o review all seven IRL field accounts; monitor for compliance with AID regulations,
- o develop letters to AID/W Contracts for procurement of equipment, employee salary approvals, consultant rate approvals, and other pertinent issues as they arise;
- o process and secure travel clearances from the AID/R&D/ED CTO for all IRL travel;
- o liaison with EDC's administrative and business services offices;
- o manage home office support backstopping the Bolivia field site;
- o maintain the LEARNTECH Project Director appraised of all issues involving AID/W follow-up;
- o manage complex procurements according to AID regulations for all project equipment; Coordinate international shipment of all commodities;
- o advise IRL's COP on contractual and administrative issues and procedures, in particular on issues related to the management of IRL subcontracts;
- o manage IRL close-down activities in the home office and in the field;
- o coordinate stateside management, procurement and contracting of short term international technical assistance;
- o represent the COP on issues of stateside management and administrative importance during the COP's absence;
- o stateside coordination of remaining two IRL international conferences, October 1993 (Bolivia) and May 1994 (Boston);
- o prepare a brief monthly report on IRL issues and activities.
