## 1.0 BACKGROUND

In September, 2013, USAID initiated the Hydro Power and Energy Planning Project (HPEP) following on the three and a half year Hydropower Investment Promotion Project (HIPP) that supported market-based initiatives to stimulate investments into Georgia's hydropower sector.

HPEP will facilitate private sector development of Georgia's hydropower resources that are environmentally, socially and economically sound. The main purpose of this project is also to support the Government of Georgia (GoG) in adopting and implementing the Georgia Electricity Market Model of 2015 (GEMM 2015) developed under HIPP to facilitate establishment of an electricity trading mechanism in Georgia. The general goals and principles of GEMM 2015 were agreed upon by USAID and GoG.

The Georgian electricity sector has made remarkable progress over the last twenty years, advancing from huge losses and blackouts in the 1990s, to collection rates over 90%, generally reliable service and near self-sufficiency today. In spite of the improvements, Georgia still experiences a shortfall of domestic supply in winter and, therefore, the GoG must secure private investment to develop the estimated 20 TWh of untapped hydropower resources the country possesses and promote cross border electricity trading to Turkey and Europe to realize Georgia's electricity export potential.

While investors and developers are willing to sign initial investment commitments, investor access to project financing needed to turn these commitments into reality requires fundamental changes to Georgia's energy governance, regulatory, operating and legislative enabling environments.

Over the last decade the retail electricity rates in Georgia were set at government specified levels with the government providing large subsidies for power plants rehabilitation and operations while on the other hand mandating retail tariffs levels without considering the real of cost of service. That approach led to unanticipated and unwanted consequences. The electricity sector regulatory framework is in dire need of reform, now seeing:

1. Lack of transparency in rate setting process;
2. Poor record on investment into the aging distribution networks;
3. Lack of incentive to invest into new generation facilities with too low of a tariff for generation production aimed for sales in the local market;
4. No incentives in rates for better utility performance; and,
5. Uncertainty about long term rate stability.

USAID through its Hydropower Investment Promotion Project (March 2010-August 2013) and its Hydro Power and Energy Planning Project (starting September 2013) provides guidance to GNERC in reforming the regulatory framework including development of the USoA for the electricity sector of Georgia. USAID assistance has included development of a regulatory chart of accounts for the electricity sector, instructions to the chart of accounts and capacity building of GNERC and the electricity sector licensees.

In October 2013 Georgia's energy regulator (GNERC) endorsed introducing Regulatory Accounting as a new task. This is a major step forward for Georgia in energy rate stability, transparency, fair allocation of costs to consumers, and elimination of hidden costs in tariffs.

Regulatory accounting or as it is known in the industry, Uniform System of Accounts (USoA), provides a sound basis for recording of expenses and assets in the regulated energy utilities. It includes a detailed chart of accounts and instructions on how to use the chart of accounts so that all expenses can be properly accounted for, audited and used as the basis for setting tariffs.

The USoA has proven to be a good tool for financial management of the utilities and without exception, the increased level of information provided by the USoA to utility management allows for better cost control and insights on the efficiency of their companies. It is a win-win success story as both consumers and investors reap benefits from this proven approach to regulatory oversight.

## **2.0 INTRODUCTION**

Licensed entities should start recording accounting transactions according to new COA upon coming into force of the appropriate legislation.

In order to support smooth and accurate conversion process of old accounts to new ones, mapping table of legally adopted COA accounts (APPROVED BY THE COMMISSION ON ACCOUNTING STANDARDS ON AUGUST 12, 1999) and new USOA COA accounts has been developed by HPEP.

In case the accounts enable direct conversion it should be done so, if otherwise, allocation factors, sound judgment and case-by-case approach should be applied in order to convert old accounts to new ones. Allocator factors should be in compliance with tariff methodologies requirements and developed considering best international practices.

Main challenge in process is fact, that existing accounts are not fit for purpose in general and leaves a lot of room for discretion understanding.

### **Explanation for Remarks**

Remark 1 – there are cases when direct paring of old (adopted COA) and new accounts are not possible and new accounts will contain info pulled from two or more old accounts.
