EXECUTIVE SUMMARY

Cambodia HARVEST is a five-and-a-half-year food security program focused on increasing incomes for 100,000 rural Cambodian households as part of the US government's Feed the Future and Global Climate Change initiatives. This annual report, the program's fifth, highlights major achievements and activities for the period of October 2014 to September 2015.

With six months of field activities remaining, Cambodia HARVEST has met or exceeded 90 percent of its indicators and is on target to reach all of them by the close of the program. Cambodia HARVEST has benefited over 300,000 people, approximately 9 percent of the population of the four target provinces, in addition to hundreds of thousands reached through a global climate change and biodiversity conservation campaign on TV and radio. A sizeable proportion of the program's beneficiaries are from marginalized groups – 66 percent are women and 27 percent are poor – which continued to benefit from impressive productivity and income gains made in the agriculture, aquaculture, nutrition, and natural resource management components.

The program successfully closed out several successful natural resource management activities this year. The non-timber forest product component concluded after directly benefitting 2,600 households, including creating 69 small enterprises working with rattan and bamboo that have dramatically increased their productivity and incomes. In addition, support for six watershed management committees – the first created in Cambodia – ended after bringing an additional 813,968 hectares of biological significance under improved management.

Highlights this year include:

- Program-supported farmers and agribusinesses generated \$22.3 million in incremental sales.
- 52,244 rice farmers harvested their crops, resulting in yield increases of 50 percent and income increases of 55 percent.
- 25,830 commercial horticulture and household vegetable farmers saw combined yield increases of 206 percent, resulting in income gains of 246 percent.
- 146 community-based savings groups provided 4,591 small-scale loans worth \$214,760 to spur microenterprise development and agricultural activities.
- The government adopted and implemented the country's first agriculture extension policy and guidelines.
- 11 agribusinesses have benefited from Public Private Alliance co-investments of \$2.4 million that are improving their productivity and strengthening their respective value chains.
- The Ministry of Environment adopted two national policies and one management plan that will strengthen the country's capacity to protect and manage its globally significant biodiversity.

Food Availability Increased

Cambodia HARVEST is working to increase the availability of food to meet the daily dietary needs of Cambodians.

- 183,670 farmers applied new technologies or management practices, 153 percent of the total program target of 120,000.
- 76,451 hectares are under improved technologies or management practices, 166 percent of the total program target of 46,000.

Increased Food Access through Rural Income Diversification

The program is strengthening the ability of Cambodians to generate income through economic activities to increase their capacity to purchase food.

- Cambodia HARVEST linked 73 horticulture producer groups with more than 200 district- and provincial-level vegetable buyers this year, resulting in new sales worth \$824,626. To date, these linkages have resulted in new sales worth \$1.1 million.
- Incremental sales from farm-level rice, horticulture, and aquaculture totaled \$15.6 million this year, bringing the total to \$28.5 million, exceeding the program target of \$28 million.
- \$6.7 million in incremental sales have been collected this year by 486 small- and medium-sized input suppliers and 19 input distributors and wholesalers, bringing the total to \$16.2 million, 135 percent of the total program target of \$12 million.

Natural Resource Management and Resilience to Climate Change

The program is working to protect the country's globally significant natural resources, which are an essential source of economic activity and food security for Cambodians.

- To date, 1.2 million hectares have been brought under improved management, exceeding the total program target of 956,000 hectares.
- 36,664 people received training in natural resource management or biodiversity conservation, exceeding the total program target of 33,499.
- 732,946 tons of carbon emissions were reduced through improved natural resource management practices this year, bringing the total to date to 2.2 million tons, which achieves the total program target.

Capacity of Public, Private, and Civil Society to Address Food Security and Climate Change

Cambodia HARVEST is strengthening the capacity of Cambodians to manage and resolve challenges related to food security and global climate change.

- 79,397 stakeholders have increased their capacity to adapt to the effects of climate variability, 174 percent of the total program target of 45,500.
- 13,033 agribusinesses and households received small-scale loans totaling \$14.8 million from microfinance institutions, exceeding the total program target of 13,000.

Overall Training and Technical Assistance

- 109,119 rural households have to date received technical assistance, 109 percent of the total program target of 100,000. Among these, 12,012 were extreme poor, exceeding the total program target of 10,000.
- To date, 310,123 people have received agriculture and food security training through demonstration sites, interactive field days, mobile kitchens, and one-on-one technical assistance, 109 percent of the 283,500 people targeted over the life of the program.

I. INTRODUCTION

I.1 PROGRAM DESCRIPTION

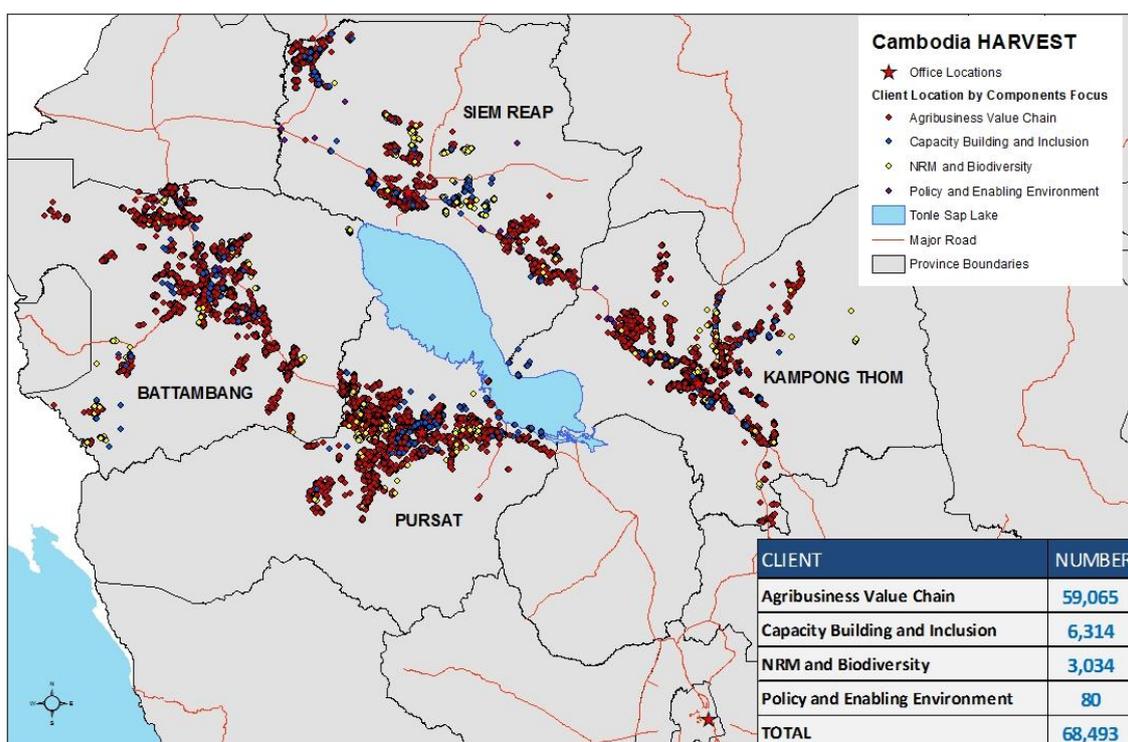

Cambodia HARVEST develops sound, agriculture-focused solutions to poor productivity, postharvest losses, malnutrition, lack of market access, environmental degradation, and the effects of climate change on vulnerable rural populations. The program is based on an intensive extension methodology in which program technicians visit their client farmers every week to provide targeted, hands-on technical assistance. In this way, Cambodia HARVEST ensures its tens of thousands of rural clients not only see short-term gains, but also build the necessary skills and knowledge to continue succeeding long after the program is finished.

The overarching goals of Cambodia HARVEST are to improve food availability; increase food access through rural income diversification; improve natural resource management and resilience to climate change; and strengthen the capacity of the public and private sectors and civil society to address food security and climate change.

I.2 GEOGRAPHIC FOCUS

Cambodia HARVEST is working in 36 out of the 42 districts that make up the four target provinces. The program has provided technical assistance in 1,470 villages around the Tonle Sap Lake: 382 in Battambang, 367 in Pursat, 354 in Siem Reap, and 367 in Kampong Thom. Figure I shows the geographic dispersal of Cambodia HARVEST target communes. Annex IV presents more detailed regional maps.

Figure I: Cambodia HARVEST Clients

I.3 CLIENT AND PARTNER PORTFOLIO

Because farmers are more likely to adopt new practices if they see the benefits firsthand, Cambodia HARVEST uses demonstration sites – established on client and lead client farms, households, or those of farmer groups or agribusinesses – to illustrate the effects of program techniques and technologies. To date, the program has directly worked with a total of 20,220 field demonstration clients (18,240 horticulture and rice; 1,654 aquaculture, hatchery, and cage culture; 144 schools; 63 health centers; and 119 forestry) and 663 partner clients (505 input suppliers; 50 rice millers; 77 commune councils; and 31 branches of nine microfinance institutions).

Definitions

- **Lead demonstration client:** A designated demonstration client who uses his/her plot to illustrate technology to other demonstration clients or beneficiaries within a village.
- **Demonstration client:** Farmers or individuals who demonstrate program techniques and technologies to nearby farmers under a co-investment agreement.
- **Partner client:** Communities or agribusinesses assisted by the program.
- **Producer group:** A number of farmers who come together as a group to leverage market options.
- **Beneficiary:** Farmers or individuals who receive indirect technical assistance from the program.
- **Participants:** Farmers or individuals who attend trainings.

I.4 IMPLEMENTING PARTNERS

Over the life of the program, Cambodia HARVEST has partnered with 21 field-based NGOs with 431 technicians to implement activities in horticulture, rice, forestry, aquaculture and fisheries, nutrition, and vocational skills training, as shown in Table I below.

2. PROGRAM COMPONENTS

2.1 FOOD AVAILABILITY INCREASED

Cambodia HARVEST's work in this area focuses on enhancing agricultural input and production systems; introducing improved crop varieties and modern agricultural techniques; diversifying rural production systems; and strengthening the agricultural policy framework.

Agriculture Input and Production Systems Enhanced

- **Rice farmers see substantial yield and income improvements.** This year, 52,244 rice farmers harvested their crops during the wet and dry seasons, resulting in sizeable increases in yields and incomes. In total, farmers increased their yields by 50 percent over baseline, resulting in sales increases of 58 percent and income increases of 55 percent. To date, Cambodia HARVEST has worked with 3,661 demonstration clients and 48,583 rice beneficiaries who are replicating the program's techniques.
- *2014-15 wet season:* 38,628 program rice farmers saw yield increases of 50 percent – from an average of 2 tons per hectare to 3 tons – resulting in income increases of 56 percent. On average, farmers saw net incomes of \$211 per hectare per cycle. The harvest netted a production increase of approximately 62,770 metric tons of paddy, valued at \$15.8 million. During the wet season, the program worked with 3,082 demonstration farmers, who increased their yields by 65 percent.
- *2015 dry season:* 13,616 program rice farmers increased their yields by 57 percent over baseline, from 2.3 tons per hectare to 3.6 tons. As a result, farmers saw average income increases of 48 percent, equivalent to average net incomes of \$600 per hectare per cycle. Overall, the dry-season harvest resulted in a production increase of approximately 25,265 metric tons of paddy, valued at \$6.3 million. Clients and beneficiaries belong to farmer groups and receive Cambodia HARVEST technical assistance through 579 demonstration sites. Demonstration farmers saw the greatest yield increases, at 70 percent over baseline.
- *2015-16 wet season:* Cambodia HARVEST is working with 83 demonstration rice clients, as the program phases out its field activities. Demonstration sites focus on the use of high-quality, high-yield, aromatic, and stress-tolerant varieties. In addition, 163 rice seed producers are demonstrating the cultivation of high-quality rice seed, which will improve available inputs for local farmers. In total, Cambodia HARVEST technical assistance has benefited 2,240 rice farmers this season.
- **Rice mills receive training on postharvest practices.** The program trained 40 rice mill operators this year on postharvest technology and improved rice standards. A better understanding of issues related to postharvest handling, including correct harvest times, proper moisture content management of paddy, and improved drying techniques, will enable rice mills to increase the efficiency and productivity of their rice mills. As rice mills improve, they will be able to buy more paddy from local farmers.

Photo by Cambodia HARVEST

Rice farmers transplant a field in Siem Reap. This year, program farmers increased their productivity 50 percent over baseline.

- **Commercial horticulture farmers increase productivity.** The program's 8,885 commercial horticulture clients and beneficiary households increased their yields by 234 percent this year, resulting in income gains of 198 percent. Client farmers saw average net incomes of \$950 per year. Currently, the average farm size is 1,300 square meters, an 86 percent increase over the previous year and 115 percent over baseline, indicating that farmers are successfully connecting with buyers and markets and are expanding the size of their farms. This year, the program introduced for the first time in Cambodia row cover netting, which protects horticulture crops from viruses transmitted by insects. Program horticulture farmers are using the netting on a trial basis, primarily for tomato and bell pepper plantings, and will introduce it to additional farmers in the coming quarter.
- **Household vegetable farmers strengthen rural food security.** The program's 16,945 household vegetable farmers increased their yields by 180 percent this year, increasing the availability of nutritious vegetables in their homes and villages. These demonstration client and beneficiary household farmers also sold excess crops to local buyers, resulting in income increases of 195 percent, which equates to an average farmer net income of \$88 per year on an average plot size of 300 square meters. Cambodia HARVEST graduated 5,937 demonstration clients this year and is currently working with 4,127 through the remainder of the program.

- **Families benefit from micro-gardens.** In trying to help families who lack arable land and therefore cannot participate in program horticulture activities, the program has helped 465 households, 27 percent of them poor, to establish micro-gardens that will diversify diets. These plots are on average 10 square meters, which is a fraction of the size of those used by household vegetable farmers. Eighty-four percent of these clients are members of the program's village-based food security and nutrition groups.

Photo by Cambodia HARVEST

Program-supported vegetable nurseries are providing farmers with a consistent source of affordable, high-quality vegetable seedlings.

- **Vegetable nurseries provide high-quality seed to horticulture farmers.** Fourteen program-supported vegetable nurseries have generated \$15,167 in sales, resulting in profits of \$13,082. The nurseries, which now function as small enterprises, were established by members of 14 horticulture producer groups to supply members and non-program farmers with a consistent source of affordable, high-quality vegetable seedlings. As a result, customer farmers do not have to grow their own seedlings, saving them time and money while lowering risk of failure.
- **Distributors introduce previously unavailable fertilizers.** At Cambodia HARVEST's request, two large agricultural input distributors are now stocking three formulations of fertilizers essential to good plant growth that were previously unavailable in the country. Two of the three, magnesium sulfate and calcium nitrate, are soluble and can be injected through drip irrigation systems, making them readily available to the plant and easier to apply than traditional fertilizers. Potassium chloride, an insoluble formulation, is the third fertilizer. All Cambodia HARVEST commercial horticulture farmers are now using the products.
- **Fish farmers see productivity and income gains.** The program's 3,031 aquaculture clients and beneficiary farmers have increased their yields by 146 percent over baseline, resulting in income increases of 101 percent. These farmers have produced 1,664 tons of fish worth \$2.5 million, strengthening food security in a country where 70 percent of the

protein comes from fish. On average, clients consume 25 percent of the fish they raise and earn \$471 in average net income per pond cycle by selling the remainder. During the reporting period, 583 aquaculture clients graduated from the program after successfully completing two cycles of fish raising and receiving a range of technical assistance, including climate adaptation measures that have reduced the risk of losses during flooding. This year, 1,500 households became non-client beneficiaries by starting aquaculture production on their own and copying the techniques and technologies demonstrated by Cambodia HARVEST clients.

- Hatcheries supply fish farmers with high-quality inputs.** The program's 14 client fish hatcheries have improved their productivity by 582 percent over baseline, helping to expand the supply of quality fingerlings available to Cambodian aquaculture farmers. The hatcheries have increased their incomes by 795 percent. This year, the hatcheries produced 3.6 million fingerlings, which is 90 percent of the program projection of 4 million. During the reporting period, the program trained all of its partner fish hatcheries on fingerling grading and accurately calculating the cost of production. These skills, used with grading screens and other new technology introduced by the program, will enable the hatcheries to supply aquaculture producers with high-quality fingerlings of equal ages over the life of the program, thereby maximizing growth rates. The hatcheries have also improved their farm budget planning through training on calculating production costs on a per-fingerling basis.

Rural Production Systems Diversified

- Program increases number of poor, women, and young beneficiaries.** In five years of operation, Cambodia HARVEST has steadily increased the percentage of beneficiaries who are poor, women, and under the age of 30, exceeding its total program targets. Currently, 11 percent of the program's clients are extreme poor (ID 1), an 83 percent increase over 2011; 66 percent of its clients are women, a 94 percent increase over 2011; and 33 percent of its clients are youth, a 184 percent increase over 2011. Cambodia HARVEST's focus on social inclusion – and the continual refinement of its client recruitment approach – is ensuring that all segments of Cambodian society benefit from program activities.

Table 3: Categories of Cambodia HARVEST Beneficiaries by Proportion, FY2011-2015

Category	FY 2011	FY 2012	FY 2013	FY 2014	FY 2015
Poor level 1	6.0%	8.9%	8.3%	9.3%	11.0%
Poor level 2	9.3%	11.9%	12.1%	12.3%	15.6%
Poor level 1 & 2	15.4%	20.8%	20.4%	21.6%	26.6%
Women	33.8%	53.5%	50.0%	54.2%	65.6%
Youth	11.5%	17.9%	18.3%	20.3%	32.7%

- Households improve dietary diversity.** This year, 48,103 people attended program nutrition events, bringing the total number of people who have received program nutrition training to date to 131,973. These activities have improved the dietary diversity of participants, according to the results of the most recent quarterly performance monitoring survey. On average, the women of reproductive age surveyed eat from 5.7 of Feed the Future's nine food groups essential to dietary diversity, a 24 percent increase over the baseline number of 4.6. Cambodia HARVEST's target is to reach an average of six food groups consumed.
- Mobile kitchens spread nutrition messages in remote areas.** The program's mobile kitchens trained 66,990 participants this year on nutrition and hygiene concepts. To date, the motorbike-pulled vendor carts have trained 133,762 participants, 83 percent of them women, in 1,054 villages, exceeding the total program target of 117,477. The mobile kitchens have introduced growth monitoring, a technique for ensuring the health and proper

development of children during the first 1,000 days of life. At present, the number of underweight children under 5 years old has decreased by 31 percent, a number that will increase when the program conducts a broader, more in-depth survey next quarter.

- Food security and nutrition groups attract poor clients.** The program's 218 food security and nutrition groups, community-based organizations focused on nutrition and hygiene, have successfully attracted poor households that are unable to participate in agriculture or horticulture activities. At present, 33 percent of the 5,205 group members – each of which represents a household – are ID 1 or ID 2 Poor, which is higher than most other program activities. These households commonly lack the land, financial resources, and social stability necessary to become program clients. The food security and nutrition groups have overcome those barriers, as seen in the table below.

Photo by Cambodia HARVEST

Participants learn to prepare nutritious food during a cooking demonstration. To date, household dietary diversity has improved 24 percent over baseline.

This year, all group members participated in a training course focused on basic financial literacy. The course educated participants on concepts that will help them better manage their household budgets, existing microenterprises, or future money-making ventures. In addition, the groups carried out a number of community action events focused on nutrition and hygiene, including cooking demonstrations and village cleanups.

Table 4: Participation in Food Security and Nutrition Groups by Gender and Poverty Level

Poverty Level	Males	Females	Total	%
ID 1 Poor	54	729	783	15
ID 2 Poor	64	875	939	18
Other	255	3,228	3,483	67
Total	373	4,832	5,205	100

Note: The Cambodian government classifies the poor using a number of criteria, such as home construction materials, economic assets, and means of transport. Using these criteria, households are categorized as ID 1 Poor, ID 2 Poor, or Other. When Cambodia HARVEST selects households for technical assistance, households show identification cards that reflect their government classification.

- Community-based savings groups increase access to credit.** The program's 146 savings groups, which are part of the 218 community-based food security and nutrition groups, continued to fund microenterprise development and agriculture activities by providing low-interest loans to contributing members. This year, the groups disbursed 4,591 loans worth \$214,760, bringing the total to date to 5,179 loans worth \$235,610. The average loan size was \$60. The groups have earned \$13,541 in interest on these loans, thereby increasing the value of their assets by 6 percent. The savings groups are composed of 2,598 people belonging to the program's food security and nutrition groups, village-based organizations that organize training and other activities in their local areas. Members have used the loans to fund agricultural activities, medical care, microenterprise operations, and household food purchases, as seen in the table below.

Table 5: Number and Purpose of Loans Disbursed, 2015

Purpose of Loan	Loans to Date	Loans This Year	% of Loan this Year
Agricultural Activities (Rice, Vegetables, and Animal Raising)	2,590	2,296	50
Micro-Enterprise Operations	880	780	17
Medical Care	518	459	10
Household Food Purchases	1,191	1,056	23
Total	5,179	4,591	100

Strengthen Policy Framework

- **Government adopts agriculture extension policy and guidelines.** Following a yearlong process of close coordination with Cambodia HARVEST and the USAID mission, the government officially adopted the country's first agriculture extension policy and guidelines. These regulations will enable farmers to access improved technologies through government and non-government extension programs, in addition to serving as a catalyst for the development and empowerment of farmer organizations. The program worked closely with the government to draft the policy and collaborated with the Ministry of Agriculture, Forestry, and Fisheries to organize consultation workshops that allowed important stakeholders to provide feedback throughout the drafting process. The policy went into effect on April 1.
- **Seed inspection regulations drafted.** Working with government counterparts, the program has drafted and submitted to the appropriate ministries four regulations under the Sub-decree of Uniformity of Seed Inspectors. These regulations, or *prakas*, supplement three others completed and submitted in 2013. When adopted by the government, the seven regulations will standardize the process by which government agencies inspect and regulate seed, ultimately leading to an improvement in seed quality in the agriculture sector. The four new regulations are:
 - Procedures for Ensuring the Quality of Crop Varieties and Seeds, submitted to the Ministry of Agriculture, Forestry, and Fisheries.
 - Procedures for Interim Fines and Complaints about Seed Quality, submitted to the Ministry of Agriculture, Forestry, and Fisheries.
 - Fees for Seed Quality Selection, Evaluation, and Certification, submitted to the Ministry of Agriculture, Forestry, and Fisheries and Ministry of Economics and Finance.
 - Assigning Competent Seed Quality Inspectors as Juridical Police, submitted to the Ministry of Agriculture, Forestry, and Fisheries, and Ministry of Justice

The following table provides more details on relevant regulations and policies in agriculture and NRM and biodiversity.

2.2 INCREASED FOOD ACCESS THROUGH RURAL INCOME DIVERSIFICATION

Cambodia HARVEST works to strengthen postharvest systems; improve market access and linkages to smallholders; expand rural employment generation; and increase investment in marketing infrastructure.

Postharvest Systems Strengthened

- Producer groups strengthen horticulture market access.** The program's 73 horticulture producer groups continued to build relationships with vegetable buyers and coordinate their production cycles, resulting in increased sales and profits for members. This year, the producer groups generated 2,532 tons of new sales worth \$824,626, bringing the total to date to 3,454 tons worth \$1.1 million. These sales represent additional business beyond what members have already generated as individuals. On average, members make sales as a group 25 percent of the time, as doing so depends on fluctuating market conditions, including whether buyers are looking to make bulk

Photo by Cambodia HARVEST

Producer groups have helped commercial horticulture farmers generate 3,454 tons of new sales worth \$1.1 million. Members also save money on bulk input purchases.

In addition to increasing market access for crops, producer groups help farmers secure bulk discounts on inputs and better interest rates on loans. This year, the program established 37 producer groups with a total of 444 farmers.

- Public Private Alliance recipients begin activities.** The program has Public Private Alliance partnerships with 11 agribusinesses worth \$2.4 million. Through co-investments, these businesses have installed equipment and participated in training designed to increase productivity, improve overall product quality, lower operating and farming costs, and strengthen technical knowledge. This year, the businesses began to see the benefits of those investments:
 - Rice mills:** Seven small and medium-sized rice mills have installed equipment that has improved their productivity and the quality of their milled rice, allowing them to buy more rice at favorable prices from 3,000 local farmers. In the first 10 months of the partnership, the mills generated sales of \$6.1 million, which is already 43 percent better than the sales numbers recorded during the previous 12 months. In addition, they have purchased 25,448 tons of paddy from farmers, 102 percent of the amount from the previous year. The total cost of the improvements was \$796,000, 63 percent of which was covered by the mills.
 - Asia Irrigation:** This input distributor has established 36 horticulture demonstration sites that have educated approximately 300 farmers. Asia Irrigation has introduced three new fertilizer formulations that were previously unavailable in Cambodia. Two of the products are soluble and can be applied through drip irrigation systems, which the distributor is also introducing to clients. To date, the distributor has sold 78 tons of the new fertilizers and 500 irrigation systems to a network of 30 retailers.
 - Prom Bunthai:** This input distributor has established 16 horticulture demonstration sites that have educated approximately 200 farmers. Prom Bunthai has also invested in a seed-packing machine that allows it to buy vegetable seeds in bulk at a discount and

package and brand it for retail sale. The company currently packages and distributes these seeds to 34 retailers.

- *United Cambodia Agri*: This input distributor has established 162 horticulture and 54 rice demonstration sites that have educated approximately 1,100 farmers. In addition to carrying three fertilizer formulations that were previously unavailable in Cambodia, United Cambodia Agri is introducing the minimum-tillage planting of rice and staple rotation crops by tractor-pulled seeders. After testing the technology on a limited basis in Battambang province, yields increased by 27 percent over baseline and gross margins grew by 42 percent to \$450 per hectare.

Photo by Cambodia HARVEST

Through a Public Private Alliance, a national input distributor is introducing tractor-pulled seeders, which help farmers increase yields on staple rotation crops.

- *Rathada fish hatchery*: Rathada Hatchery in Siem Reap has completed construction of new facilities and has begun producing fingerlings. With \$50,143 worth of new equipment and 16 new ponds, the hatchery is annually producing 600,000 male red Tilapia fingerlings, which, given their desirable growth rates, offer an important input for fish farmers. Using all-male Tilapia, farmers will be able to produce 500-gram fish within six months, compared to 250-gram fish using mixed-sex fingerlings.
- **New facilities allow seed cooperatives to store rice.** Three rice seed cooperatives continued to benefit from storage facilities built with support from Cambodia HARVEST's technology fund. The 45-ton facilities allow 344 member farmers to store their rice and sell it in the months following a harvest, when prices are higher and market conditions more favorable. Since building the facilities, the farmers have made \$44,875 in sales, an increase of 322 percent over baseline, a gain attributable almost exclusively to the new storage facilities.

Value of Incremental Sales Increased at Farm and Small- and Medium-Enterprise Level

- **Value of incremental sales increased at the farm and enterprise level.** Horticulture, rice, and aquaculture clients saw incremental sales increases of \$15.6 million this year, bringing the total value of incremental sales increases to date to \$28.5 million, exceeding the total program target of \$28 million. To date, rice farmers have seen incremental sales increases of \$15.9 million, horticulture farmers \$11.1 million, and aquaculture farmers \$1.5 million.
- **Agribusinesses increase incremental sales.** Agricultural input suppliers and small- and medium-sized rice mills reported incremental sales increases of \$6.7 million this year, bringing the total amount to date to \$16.2 million, 135 percent of the total program target of \$12 million. The program's 505 client retail input suppliers, wholesalers, and distributors have increased their revenues by 73 percent over baseline. Cambodia HARVEST is helping input suppliers improve the quality of goods and services available to local farmers and increase the incomes of families running these microenterprises.

2.3 NATURAL RESOURCE MANAGEMENT AND RESILIENCE TO CLIMATE CHANGE IMPROVED

The program is strengthening Cambodia's ability to adapt to global climate change; enhancing the enabling environment for sustainable resource management; improving environmental monitoring and management; and increasing the economic benefits of natural resource management and conservation.

Enabling Environment for Sustainable Resource Management Enhanced

- **Community forests graduate and implement a range of activities.**

Sixteen community forests graduated from the program this year after completing the full package of technical assistance, including participating in training on forest management plan development, boundary demarcation, and institutional strengthening toward completing the 11-step legalization process. The hard work being done by community forest groups to better protect and manage their resources is beginning to receive public recognition. Opong Rong Community Forest in Kampong Thom won second place in the National Community Forestry Championship, an annual competition organized by the Forestry Administration. The program's 30 community forests undertook a number of other activities this year:

Photo by Cambodia HARVEST

Krangthum Community Forest is one of 30 community forests that have replanted 177.5 hectares of degraded land.

- *Registration process:* All 30 community forests have now reached at least step seven of 11 in the process of receiving official legal recognition by the Forestry Administration, a critical milestone for these communities. Reaching step seven gives the communities recognition of tenure at the national government level, allowing them to develop forest management plans, which is necessary for the commercialization of forest resources. In addition to legal and registration support, Cambodia HARVEST has provided technical assistance on forest fire management and risk reduction, global climate change, silviculture, and sustainable forest management.
- *Reforestation planting:* Sixteen community forests have replanted 49.5 hectares of degraded land this year. When mature, the seedlings will be sustainably harvested and sold to fund the forestry monitoring and protection activities of the communities, benefiting 6,396 households. To date, the program has supported the reforestation of 177.5 hectares of degraded land in 30 community forests. Reforestation activities are part of Cambodia HARVEST's efforts to promote sustainable forest management and silviculture, which are improving the long-term health of Cambodia's community forests.
- *Sustainable harvesting practices:* The program's 30 partner community forests completed a training program on silviculture and sustainable harvesting of forest resources, the first time such techniques have been introduced on a large scale in Cambodia. Thirteen of these communities with harvestable resources have generated average revenue of \$580 per hectare from the harvesting of wooden poles and firewood, which will be invested in improved forest management and patrolling activities. The government has replicated Cambodia HARVEST's silviculture techniques at three non-program community forests,

and international NGO RECOFTC is planning to replicate the approach in additional communities.

- *Fire management:* The program trained all partner community forests on fire management this year. The training will help community forests identify areas most at risk and help them target specific forest user groups with fire awareness messages to reduce the risk of accidental fires occurring.
- **Non-timber forest product activities reach successful conclusion.** The program's non-timber forest product component closed out this year after directly benefitting 2,600 households in 30 communities. Since 2011, Cambodia HARVEST has provided technical assistance to 69 non-timber forest product producer groups, which have evolved into small and medium-sized enterprises composed mostly of women who make furniture and handicrafts to supplement their household incomes. As a result of this assistance, the groups increased their revenues by 430 percent and increased their profits by 535 percent over baseline. In addition to working with producer groups, Cambodia HARVEST developed the raw material resource base through improved nursery technologies and seedling propagation, large-scale commercial plantings, and community forest plantings in degraded areas. As a result of this success, a number of development organizations have adopted Cambodia HARVEST's approach, including GIZ, WWF, and FAO.

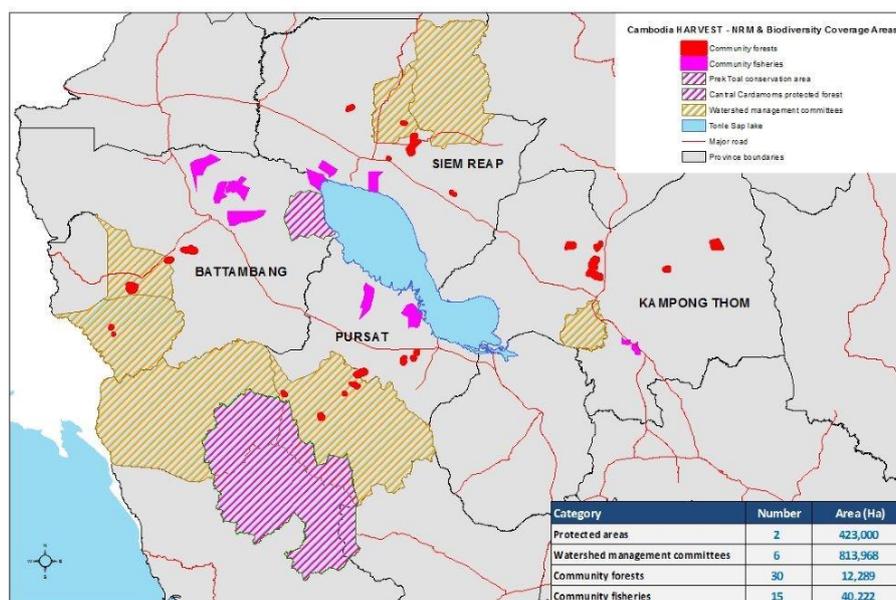

Table 7: Highlights of Non-Timber Forest Product Activities

Livelihood Development Successes	Resource Base Development Successes
69 producer groups have evolved into small- and medium-sized enterprises, increasing their revenues by 430 percent and profits by 535 percent.	75 hectares of bamboo and rattan planted on degraded community forest land with 1,500 beneficiaries.
Introduced bamboo to 35 producer groups as a new raw material to generate income.	17 bamboo demonstration planting sites with 350 beneficiaries.
Implemented 30 major skill development trainings, seven study tours, and three market studies.	Five propagation methods for bamboo introduced, 60,000 plants produced.
Piloted the production and use of bamboo charcoal to recycle waste from furniture production.	Introduced three new high-yield varieties of bamboo to improve product value.
Produced training videos on bamboo shoot production and bamboo charcoal making.	Provided bamboo clump management and sustainable harvesting training to increase yields at community forests.
Developed technical drawings and designs for all 115 furniture and handicraft product lines.	Introduced nine new sustainable rattan harvesting and processing techniques.

- **Forum highlights non-timber forest sector.** Cambodia HARVEST helped coordinate the country's first national forum on community-based non-timber forest product enterprises, generating significant interest in the nascent sector. The two-day event featured 50 enterprises from the bamboo, rattan, honey, and resin value chains, in addition to showcasing the program's enterprise development in bamboo and rattan. Cambodia HARVEST presented on the program's non-timber forest product business model, which has improved the profitability of bamboo and rattan producer groups by 535 percent.

Environmental Monitoring and Management Improved

- **Program expands land under improved natural resource management.** Working with government and community partners, Cambodia HARVEST has to date brought 1.2 million hectares of land under improved management, 131 percent of the total program target of 956,000 hectares. The map below shows the program's natural resource management and biodiversity coverage areas in activities associated with watershed and protected area management and community forests.

Figure 2: Natural Resource Management and Biodiversity Coverage Areas

- **Government adopts national biodiversity policies.** With significant support from Cambodia HARVEST, the Ministry of Environment has adopted and is implementing two national policies and one management plan that are strengthening the country's capacity to protect and manage Cambodia's globally significant biodiversity:
 - *National Biodiversity Strategy and Action Plan:* This policy sets out a countrywide approach to biodiversity that ensures all government entities are working collaboratively to achieve agreed-upon goals. Cambodia is now among the first countries in the world to have an updated policy, which is a requirement of signatories of the International Convention on Biological Diversity.
 - *National Biodiversity Status Report:* This policy provides, for the first time since 2001, a snapshot of the state of biodiversity in Cambodia, including all known flora and fauna species. It forms the basis of the National Biodiversity Strategy and Action Plan and will be available publicly on the Ministry of Environment website.
 - *Prek Toal Management Plan:* This new five-year plan governs the management and protection of resources and wildlife in the 21,000-hectare Prek Toal Core Area. Located in the Tonle Sap Biosphere Reserve, Prek Toal is home to one of the largest remaining colonies of large water birds in Southeast Asia, including many globally endangered species.
- **Watershed assistance completed.** The program has completed its watershed management component, which has resulted in the creation of six government watershed management committees, the first such entities created in the country. Cambodia HARVEST support has improved the government's ability to adapt to global climate change and strengthened the natural resource management of 813,968 hectares of biological significance in the four target provinces. All participating committees, which cover seven districts, have been officially recognized by the government and have implemented watershed plans of action, which integrate forest conservation, pollution control, and riverbank stabilization activities into district government budgets. Watersheds, or areas of land where water converges from higher elevations, are a vital feature of the Cambodian countryside: they protect biodiversity, maintain upland forests and rain catchments, sustain dry-season lake

levels, and preserve fish stocks. In doing so, they help sustain hundreds of thousands of people whose livelihoods depend on forests, agriculture, and fisheries.

- **Program activities contribute to carbon sequestration.** Cambodia avoided emissions equivalent to 732,946 tons of carbon this year as a result of the program's work on reforestation and protected areas management, according to a study conducted this year. To date, the program has helped Cambodia avoid 2.2 million tons of carbon emissions, equivalent to the amount produced by 461,580 cars in one year and with a value of \$13.1 million on the international carbon market, based on 2014 prices. Cambodia HARVEST calculated the savings using the AFOLU Carbon Calculator, a tool developed by Winrock and USAID.
- **Program strengthens management of Central Cardamoms Protected Forest.** In the past year, program-supported rangers have conducted 1,081 patrols covering 24,704 kilometers to protect and conserve the 402,000-hectare Central Cardamoms Protected Forest and its globally significant biodiversity. Cambodia HARVEST continues to provide technical assistance to 40 government and 12 community rangers based at six ranger stations, as well as monthly oversight of the SMART (Spatial Monitoring and Reporting Tool). The results of these efforts are paying off, with deforestation of less than 0.5 percent in 2015, much lower than many other areas in Cambodia.
- **Program launches biodiversity monitoring activity.** In close coordination with the Forestry Administration and NGO partners, Cambodia HARVEST is supporting the first large-scale biodiversity monitoring program for the 402,000-hectare Central Cardamoms Protected Forest. Using 37 camera traps, the initiative has recorded 16 species of birds and 24 species of mammal too elusive to observe directly, including globally vulnerable and endangered large mammals such as the Asian elephant, clouded leopard, and gaur. The initiative will continue through March 2016 and will form the basis of long-term biodiversity monitoring at the Central Cardamoms Protected Forest, which will be included in the Forestry Administration's new five-year management plan drafted via support from Cambodia HARVEST.
- **Community fisheries graduate.** This year, six partner community fisheries graduated from the program after demonstrating their ability to capably monitor and protect their resources. The communities reported that they have tripled the fish populations under their management and significantly improved the detection of illegal fishing activities in their areas. Cambodia HARVEST continues to work with nine partner community fisheries on a range of issues, including strengthened monitoring and protection and improvements in fish habitats.

2.4 CAPACITY OF PUBLIC, PRIVATE, & CIVIL SOCIETY TO ADDRESS FOOD SECURITY & CLIMATE CHANGE

Cambodia HARVEST works with local partners to increase the capacity of producer groups and private sector networks; enhance the capacity for adaptive research and extension; and establish the capacity for climate adaptation and mitigation.

Capacity of Producer Groups and Private Sector Networks Increased

- **Farmers access small loans from partner microfinance institutions.** With program assistance, 6,007 farmers and agribusinesses received loans worth \$8.73 million this year. To date, 13,033 farmers have received loans worth \$13.23 million, and 111 agribusinesses have received loans worth \$1.6 million. Lack of access to credit hinders productivity in rural areas, impeding economic growth and food security. Cambodia HARVEST works with nine partner microfinance institutions to increase the availability of loans with favorable rates and terms in the four target provinces. The following table breaks down loan recipients by sector and farmer type.

Table 8: Loan Recipients by Sector and Farmer Type

Demonstration Clients and Beneficiary Types	Number of Borrowers	Average Size of Loan (\$)	Total Value of Loans (Million)
Household Vegetable Plots	2,635	713	1.88
Commercial Horticulture Plots	1,560	1,050	1.64
Fish Ponds	779	940	0.73
Rice	7,948	1,130	8.98
Total Farmers Receiving Loans	12,922	1,024	13.23
Total Agribusinesses Receiving Loans	111	14,414	1.60
Total Farmers and Agribusinesses Receiving Loans	13,033	N/A	14.83

Capacity for Adaptive Research and Extension Enhanced

- **Provincial department of agriculture officials benefit from extension training.** Cambodia HARVEST has launched the second round of horticulture extension training for government officials. During this installment of the training, which will end in March 2016, the program is educating 20 officials from the departments of agriculture in the four target provinces. The first round of training, involving 27 officials, is scheduled to finish in October. The course, which is modeled on Cambodia HARVEST's successful agriculture methods, is improving the ability of provincial agriculture officials to provide extension services to farmers. It includes instruction on land preparation, drip irrigation, integrated pest management, and other good agricultural practices, in addition to sessions on gender and nutrition concepts. Participating officials have established horticulture demonstration plots in their respective districts for hands-on training of farmers.
- **Government officials and academics benefit from short-term training.** Cambodia HARVEST continues to build the skills and knowledge of promising Cambodian leaders and academics under the Limited Participant Training Program. During the reporting period, the program supported eight government officials who attended international workshops, bringing the total number that have attended international, regional, and national events to date to 182. Highlights this year included the World Aquaculture Conference in Korea, which five government fisheries officials attended, and the FAO World Inland Fisheries conference, which two officials attended.
- **Field interns complete trials on bio-control agent.** Twenty-seven university students participated in the program's field internship initiative this year, bringing the total participants to date to 50. During the reporting period, the program supported three groups of students:
 - *Trichoderma field trials:* Five University of Battambang students conducted field horticulture comparison studies to demonstrate the effectiveness of Trichoderma, a bio-control agent used in commercial horticulture against soil fungal pathogens. In addition, the university laboratory assessed the quality of commercial products available in Cambodia. Results of the trial showed a 17 percent increase in cucumber yields and a 12 percent increase in bitter melon yields with the use of Trichoderma.
 - *University of Battambang field research:* Twelve students collected data on technology adoption rates among participants in one or two Cambodia HARVEST training events. The data helped the program understand the changes in productivity and income that occurred among beneficiaries.
 - *Build Bright University:* Ten students from this Battambang university participated in a one-month monitoring and evaluation internship. Participants worked with Cambodia HARVEST staff in the field to conduct a structured survey of program clients in the four target provinces. The internships provided the students with an opportunity to

significantly strengthen their research skills, with a focus on field data collection and processing methods.

- **Program hosts aquaculture seminar.** The program hosted 48 university students and 12 Fisheries Administration officials for a four-day seminar and field visits. The objective of the event was to introduce students and faculty to the new aquaculture approaches and techniques introduced by Cambodia HARVEST, in response to an earlier request from the Fisheries Administration. The students came from the Kampong Cham National College of Agriculture, the Royal University of Agriculture, and Prek Leap National College of Agriculture. The subsequent field visits gave the students, many of whom come from poor backgrounds, the opportunity to learn from farmers about the realities of the aquaculture sector and highlighted career options in the public and private sectors.
- **Training strengthens commune council nutrition capacity.** Cambodia HARVEST is continuing to partner with local government in an effort to strengthen nutrition practices in rural households. This year, the program trained 27 commune council members designated as focal points on women and children in their communes. The training will help the focal points more effectively invest commune funds in nutrition-related activities. The focal points are now collaborating with program-supported food security and nutrition groups to plan and facilitate community action events related to nutrition, hygiene, and sanitation. Also, the focal points are refining work plans for community outreach to schedule activities and strengthen nutrition and hygiene messaging.

Capacity for Climate Adaptation and Mitigation Established

- **Mobile campaign reaches forest and fishery communities.** The program completed a mobile media campaign that delivered global climate change and biodiversity conservation messaging to 32 community forestry groups and 13 community fisheries, reaching a total of 6,956 participants. These communities are in remote areas and were not exposed to the national broadcast media campaign conducted by the program last year. As part of the campaign, pickup trucks traveled to villages and set up portable cinemas that screened excerpts from short films and TV spots with climate change and biodiversity conservation themes. In addition, the mobile team disseminated posters and leaflets with similar themes.

Operations Support

- **High-profile delegations tour program sites.** Cambodia HARVEST hosted a number of high-profile site visits by Cambodian and US government officials, development partners, and regional participants this year. Field tours showcased program successes in agriculture, forestry, aquaculture, and nutrition:
 - Office of the Council of Ministers and USAID mission representatives toured field activities in Pursat, Battambang, and Siem Reap. The delegation observed the program's ongoing work to improve natural resource management of community forests and fisheries, as well as activities that are strengthening the commercial horticulture, aquaculture, and rice value chains.
 - Officials from the national and provincial levels of the Forestry Administration visited Pneas and Banan community forests in Battambang to observe silviculture and reforestation activities.
 - Charles North, USAID's senior deputy assistant administrator for the Energy Environment Education Bureau, visited community forest, aquaculture, and commercial horticulture producer group activities in Siem Reap.
 - Susan Markham, USAID's senior coordinator for gender equality and women's empowerment, visited horticulture producers and nutrition activities benefiting women.

- Forty representatives from the International Fund for Agricultural Development visited program nutrition, horticulture, aquaculture, and marketing activities. The delegates were from Afghanistan, Bangladesh, China, and Mongolia, among other countries.
- The USAID-funded SPRING (Strengthening Partnerships, Results, and Innovations in Nutrition Globally) project conducted a 10-day field observation of Cambodia HARVEST's data collection methods.
- The program hosted a field visit for representatives from USAID's regional LEAF (Lowering Emissions in Asia's Forests) program. More than 30 participants from six countries visited Khnar Pou community forest in Siem Reap to learn about the challenges facing the community in terms of integrating gender and climate change into forest management planning.
- USAID Assistant Administrator Charles Cooper and Deputy Assistant Administrator Barbara Feinstein visited program commercial horticulture activities in Siem Reap.
- Twenty-four representatives from the United Nations Development Program's Promoting Climate-Resilient Water Management and Agricultural Practice in Rural Cambodia in Kratie province visited program commercial demonstration farms.
- Approximately 50 participants from the government, the private sector, NGOs, and donors attended a consultative workshop focused on the new Accelerating the Adoption of Stress-Tolerant Varieties by Smallholder Farmers in Nepal and Cambodia, a three-year project funded by USAID working in the Feed the Future zones of influence in Cambodia and Nepal. Cambodia HARVEST presented its activities, results, and lessons learned in the rice component, and specifically in the rice seed production activities.

3. ACTIVITIES PLANNED FOR NEXT QUARTER

Food Availability Increased

- Install seed cleaning machines at four rice seed production cooperatives and train members on the operation of this equipment.
- Establish 45 demonstration fields for the dry season starting in November 2015 and train 500 rice clients.
- Link rice seed producer cooperatives with 15 retail input suppliers so that they can stock rice seed in their shops.
- Conduct evaluation of mechanized plantings of rice and rotation crops.
- Install row cover netting on 10 tomato and pepper farms on a trial basis.
- Submit registration protocols for bio-control agents, in collaboration with the General Directorate of Agriculture and GIZ.
- Provide business plan assistance to 13 partner fish hatcheries for increased fingerling production and new market linkages.
- Conduct survey on relationship between nutrition activities and underweight children.
- Train 10,000 participants from 200 villages with mobile kitchens.
- Provide \$50,000 in small-scale loans with community-based savings groups.
- Support commune-level handover workshops for savings groups.
- Plan field visits for NOURISH agriculture extension workers to demonstration sites and identify input suppliers interested in participating in WASH and business service activities.
- Host four World Breastfeeding Week events.
- Conduct cooking and growth monitoring demonstrations at the National Nutrition Day fair in Phnom Penh.
- Host 90 events on waste management, build 50 handwashing stations, and organize 70 events on kitchen hygiene.

Natural Resource Management and Resilience to Climate Change

- Reduce approximately 180,000 tons of carbon emissions.
- Complete the five-year management plan for the Central Cardamoms Protected Forest.
- Release results of large-scale biodiversity monitoring program for the Central Cardamoms Protected Forest, including endangered species captured on film.
- Complete second cycle of silviculture and technical assistance to 13 community forests on commercial harvesting.
- Conduct refresher training for local forestry officials on silviculture and sustainable forest management.
- Develop silviculture guidelines for all major forest types in Cambodia for Forestry Administration.
- Complete drafting of benefit-sharing mechanism for community forests.
- Construct three watchtowers and improve fish habitats for community fishery refuge ponds.

Capacity of Public, Private, and Civil Society to Address Food Security and Climate Change

- Complete extension training of 27 provincial agriculture officials.
- Support two government officials to attend regional training on small-scale freshwater aquaculture.
- Train 25 government officials and private sector representatives on hatchery production.
- In conjunction with GIZ, support five government officials to attend five-day training program at Thai Department of Agriculture on protocols and registration procedures for introduction of biological control agents in Cambodia.

Cambodia HARVEST | Helping Address
Rural Vulnerabilities and Ecosystem STability

SNAPSHOT With Better Extension Services, Farmers Thrive

Agricultural extension policy provides farmers with vital skills and tools.

Photo by Cambodia HARVEST

An input supply shop owner advises customers on agricultural products. A new national policy will standardize how government and private-sector extension providers offer advice and technology to farmers.

“[The policy] will promote economic growth, food security, and poverty reduction.”

- Mao Minea, director of the Cambodian government's Department of Agriculture Extension

For farmers, knowledge is vital. A country's agricultural extension system supplies that knowledge through a network of government and private-sector service providers. In addition, the system links farmers with the technology and markets they need to succeed. A strong agricultural extension system is essential to increasing agricultural productivity – and strengthening food security.

So when the Cambodian government passed its first agriculture extension policy in April 2015, the country reached a major milestone. The policy sets forth a standardized national approach to training farmers. In addition, the policy will serve as a catalyst for the development and empowerment of farmer organizations.

Mao Minea, director of the government's Department of Agricultural Extension, said the policy will have a positive impact well beyond Cambodia's agriculture sector. “It will promote economic growth, food security, and poverty reduction,” he said.

Cambodia HARVEST and the USAID Mission in Cambodia worked closely with the government to develop the policy, one of 12 national agricultural policies the program is helping Cambodia to advance. During a yearlong process, Cambodia HARVEST assisted the Ministry of Agriculture, Forestry, and Fisheries with research, writing, and a series of consultation workshops that gathered key players from the agriculture sector to provide feedback. “Cambodia HARVEST was important throughout the process,” Mao said.

The policy will improve the flow of information from research institutions such as universities down to farmers, and it will also make the transfer of technology to farmers from the private sector much more efficient. It will do this by strengthening the knowledge, skills, and resources of the glue that holds the network together: extension service providers, who range from government officials to rural retail supply shops.

Cambodia HARVEST is working in other areas to support extension services. It is training 47 provincial- and district-level agriculture officials on the program's proven horticulture methodology, thereby improving their ability to advise farmers in the field. In addition, the program is supporting 505 client input suppliers, village-based shops that farmers regularly solicit for advice. The goal of all of these activities is the same: provide farmers with the tools they need to succeed.

Cooperatives Increase Supply of Good Rice Seed

Rice farmers benefit from availability of high-quality inputs.

Photo by Cambodia HARVEST

Lim Nou, the head of a rice seed cooperative, stands in front of a storage facility built with program assistance. The facilities protect the cooperative's seed and allow members to sell their product in the months after harvest, when prices and demand are higher.

“Nearly every farmer in the village buys from us. They’re getting great results.”

- Lim Nou, president of the Kouk Nguon rice seed cooperative.

Like many rice farmers in Cambodia, the residents of Kouk Nguon village face a persistent problem: finding high-quality seed for their fields. In practice, this means that no matter how good their growing techniques are, their yields and incomes are limited by the quality of their inputs – the seeds they plant in the ground.

“Our community is poor. But we thought that we could earn better incomes by working together to solve this problem,” said Lim Nou, a rice farmer from the village, located in Cambodia’s northwest.

In 2012, 15 members of the local agriculture development cooperative joined forces to grow rice seed collectively. With assistance from Cambodia HARVEST, the group works together to produce four varieties of seed that are in high demand. They sell to farmers in their community, who are desperate for high-quality product. “Nearly every farmer in the village buys from us. They’re getting great results,” Lim said. On average, farmers see productivity improvements of approximately 70 percent by using better quality seed and implementing the program’s good agricultural practices.

This year, Cambodia HARVEST helped three rice cooperatives improve even further. With co-investments from the program’s technology fund, they built storage facilities that can accommodate 45 tons of product each. Under the terms of the co-investment, the farmers supplied the land and Cambodia HARVEST built the facilities. The warehouses allow members of the cooperatives to store their paddy and sell it in the months following a harvest, when prices are higher and market conditions are more favorable. The facilities also protect the seed from damage between growing seasons.

Since the start of the current growing season, the three cooperatives have made \$44,875 in seed sales, an increase of 322 percent over the previous season, a gain attributable almost exclusively to the new storage facilities. “Our storage facility is essential. Without it, we’d have a difficult time producing good seed,” Lim said.

Program's Success Spurs Creation of New Businesses

As farmers become more productive, enterprises emerge to support them.

Photo by Cambodia HARVEST

Fish processors display their products at a national trade fair in Phnom Penh. Cambodia HARVEST has helped create 114 new small businesses in a variety of value chains.

“We now have a thriving business.”

- Ros Sophy, member of the Krakor Floating Community fish processing enterprise.

Cambodia HARVEST has increased the incomes and food security of tens of thousands of rural households. Yet the program's impact extends far beyond these direct clients. As farmers have become more productive, small businesses have sprung up to support them.

To date, Cambodia HARVEST has created, either directly or indirectly, 114 small and medium-sized enterprises. These newly formed businesses operate at all levels of rural value chains, including rice, commercial horticulture, aquaculture, and forestry.

On the input side, tree and vegetable nurseries and fish hatcheries have formed to supply farmers with high-quality inputs. On the processing side, non-timber forest product makers and fish processors buy raw material to produce retail products. Many of these enterprises wouldn't exist without the improvements in farmer productivity that have occurred as a result of Cambodia HARVEST's assistance.

Phon Chanry, who runs the Heng Try fish hatchery, is one such business owner. He converted his unprofitable aquaculture farm into a fingerling hatchery in July 2014 after noticing rising demand for high-quality inputs among local fish farmers, many of them Cambodia HARVEST clients. “I saw a business opportunity,” he said.

Phon increased his sales by 264 percent by implementing financial recordkeeping, creating a business plan, and marketing his products. He's investing much of that money back in his business. “The change has been drastic,” he said.

Meanwhile, small-scale fish processors, who smoke and ferment fresh product in their homes for retail sale, have organized themselves into processing groups that act as small businesses. These enterprises, composed of mostly poor women living in floating villages on the Tonle Sap lake, form market linkages, coordinate production, and market their products with attractive and hygienic packaging. “We now have a thriving business,” said Ros Sophy, a member of the Krakor Floating Community enterprise.

Water User Groups Maximize Benefits of Irrigation

Consistent access to water improves farmer productivity and incomes.

Photo by Cambodia HARVEST

Ty Bunsong, Mao Sokhorn, Vean Sokheng in front of a canal lock rehabilitated by Cambodia HARVEST. Members of the Polyum Water User Group have increased their household incomes by 536 percent.

“Now, we will always have enough water.”

- Mao Sokhorn, member of the Polyum Water User Group

Cambodia's 2015 monsoon season was one of the driest on record. Although rice farmers traditionally see their highest yields during this period, many faced poor harvests – and some even chose not to plant their fields at all.

For the members of the Polyum Water User Group, the situation couldn't have been more different. Although they are located in the northwestern province of Pursat, where the drought hit hardest, their rice fields were lush and green. “We're not feeling the effects of the drought at all. We're expecting a great harvest,” said Ty Bunsong, a member of the group.

The key has been access to water – and a cooperative approach to using it. In 2013, Cambodia HARVEST rehabilitated 7 kilometers of the Polyum Canal, providing much-needed irrigation to local paddies. Yet water alone wasn't enough. “After the canal was built, there was a lot of conflict over who could use it. We weren't getting the most out of it,” said Vean Sokheng, the group's chief.

In May 2015, 424 families banded together to form the water user group. With Cambodia HARVEST assistance, the members developed a sustainable management structure that allowed everyone to join. Members pay an entry fee and annual dues based on the size of their land. The group governs access to irrigation, thereby maximizing efficiency and eliminating conflict. In addition, membership fees cover maintenance to ensure the canal is in working order for years to come.

With consistent access to water, and by implementing Cambodia HARVEST's good agricultural practices, group members have increased their productivity from an average of 2,500 kilograms per hectare to more than 4,000. They are now able to grow up to three cycles of rice per year rather than the customary single cycle, and they are producing a high-quality variety that fetches good prices. As a result, their household incomes have increased by 536 percent.

Perhaps most important, group members have adapted to prolonged droughts, an increasingly common and harmful impact of global climate change. “When droughts like this happened in the past, we waited for the rain to come – or didn't plant rice at all,” said Mao Sokhorn, a group member. “Now, we will always have enough water.”

Vegetable Farmers Adapt to a Changing Climate

Simple, inexpensive technologies will help manage future challenges.

Photo by Cambodia HARVEST

A commercial horticulture client tends to his chili crops. Raised beds and plastic mulch are helping farmers adapt to the effects of changing weather patterns.

“I know that when the heavy rain comes, my vegetables will survive.”

- Kuch Hat, commercial horticulture farmer from Pursat Province

As the earth's climate changes, Cambodia will experience temperature increases of 0.3-0.8°C by 2025 and up to 35 percent more rainfall by 2100, according to a recent report by the Mekong River Commission. These shifts will mean shorter and more intense wet seasons and longer and more arid dry seasons. Adapting to these changes presents an enormous challenge for the country's commercial vegetable farmers.

“Big rains are a problem now, and they're only getting worse,” said Kuch Hat, a commercial vegetable farmer in Pursat Province.

Cambodia HARVEST is helping farmers such as Kuch overcome these climatic challenges through a range of affordable, simple technologies. Tools such as raised planting beds, plastic mulch, and drip irrigation systems, in conjunction with improved fertilization and pest and disease control, are helping commercial horticulture clients better manage their farms, leading to productivity improvements that are strengthening Cambodia's food security. To date, approximately 8,700 commercial horticulture clients and beneficiary households have improved their yields by 205 percent, resulting in income gains of 230 percent.

Raised planting beds – row-length, 30-centimeter-high mounds of soil – enable crops to develop stronger and larger root systems. In addition, they ensure optimal drainage after heavy rains, promote good soil aeration, and help prevent soil erosion. Raised beds cost nothing and merely require farmers to put in additional labor during land preparation. Plastic mulch – thin sheets of material that cover raised beds – is used with drip irrigation systems. During droughts, plastic mulch retains soil moisture. When it rains, the mulch repels water and keeps beds intact, especially during floods.

Kuch, whose crops include eggplant, cucumber, and long bean, uses the technology to grow vegetables year round. “Before, I couldn't grow during the rainy season because I knew my crops would be damaged by heavy rains,” he said. Now, he earns six times more money than he did before becoming a Cambodia HARVEST client. Most important, he feels prepared for the climatic changes coming to Cambodia. “With these techniques, I'm not worried about the increase in rain,” he said. “I know that when the heavy rain comes, my vegetables will survive.”

Fish Farmers Sharpen Business and Management Skills

With improved planning, clients get the most out of their ponds.

Photo by Cambodia HARVEST

The program's 3,031 aquaculture farmers have increased their yields by 146 percent, resulting in income gains of 101 percent. These farmers have adopted concepts such as bookkeeping, production timing, and budgets.

“Before we even stock the pond, we have a good idea of what will happen during the growing cycle.”

- Eang Saray, fish farmer in Siem Reap Province

Smornh Hieng is a fish farmer in Pursat Province. Until recently, she hadn't thought much about the fundamentals of the job, such as how to plan a fish-raising cycle and create a budget. “I did a lot of guessing, and that cost me money,” she said.

Like many Cambodian fish farmers, Smornh made ad-hoc decisions based on the advice of input suppliers – local retail stores that stock feed and other supplies – who have a financial interest in selling the most amount of product possible, not necessarily offering objective guidance. Without a farm plan and budget, Smornh couldn't evaluate her production costs and expected income, thus dramatically increasing the risk of her pond losing money.

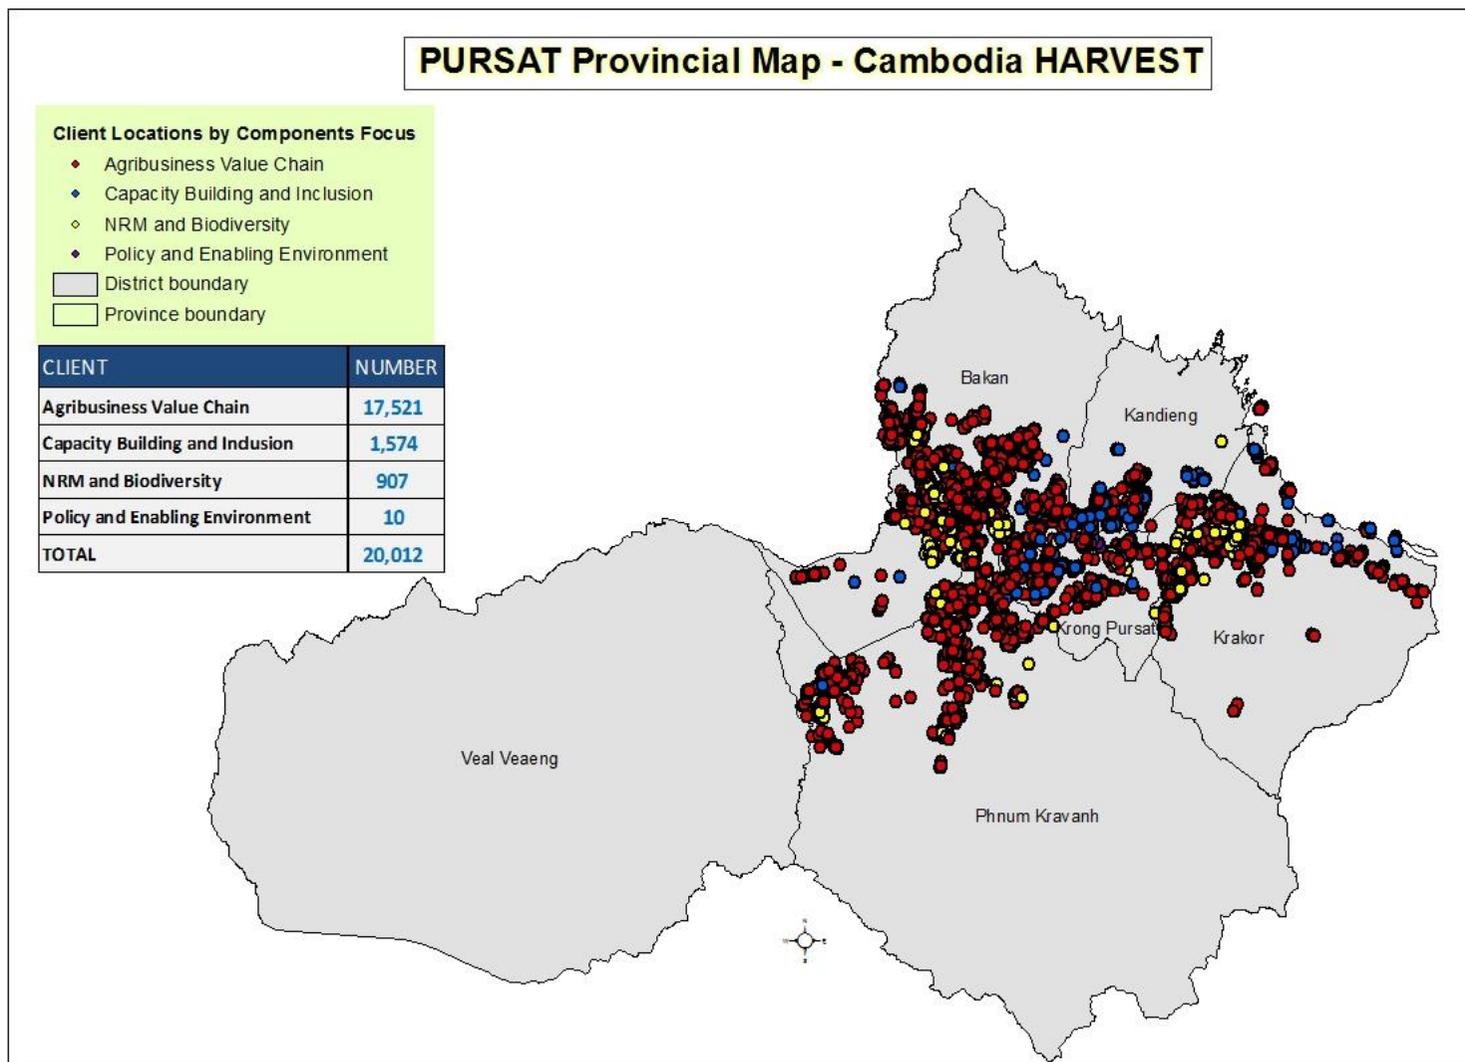

To help fish farmers like Smornh reduce risk and maximize the potential of their ponds, Cambodia HARVEST has introduced improved farm management concepts such as bookkeeping, production timing, and budgets. In conjunction with the program's good aquaculture practices, these techniques have helped 3,031 aquaculture farmers increase their yields by 146 percent, resulting in income gains of 101 percent. By increasing the supply of fish – which provides 70 percent of the protein in the Cambodian diet – aquaculture farmers are strengthening food security in their communities.

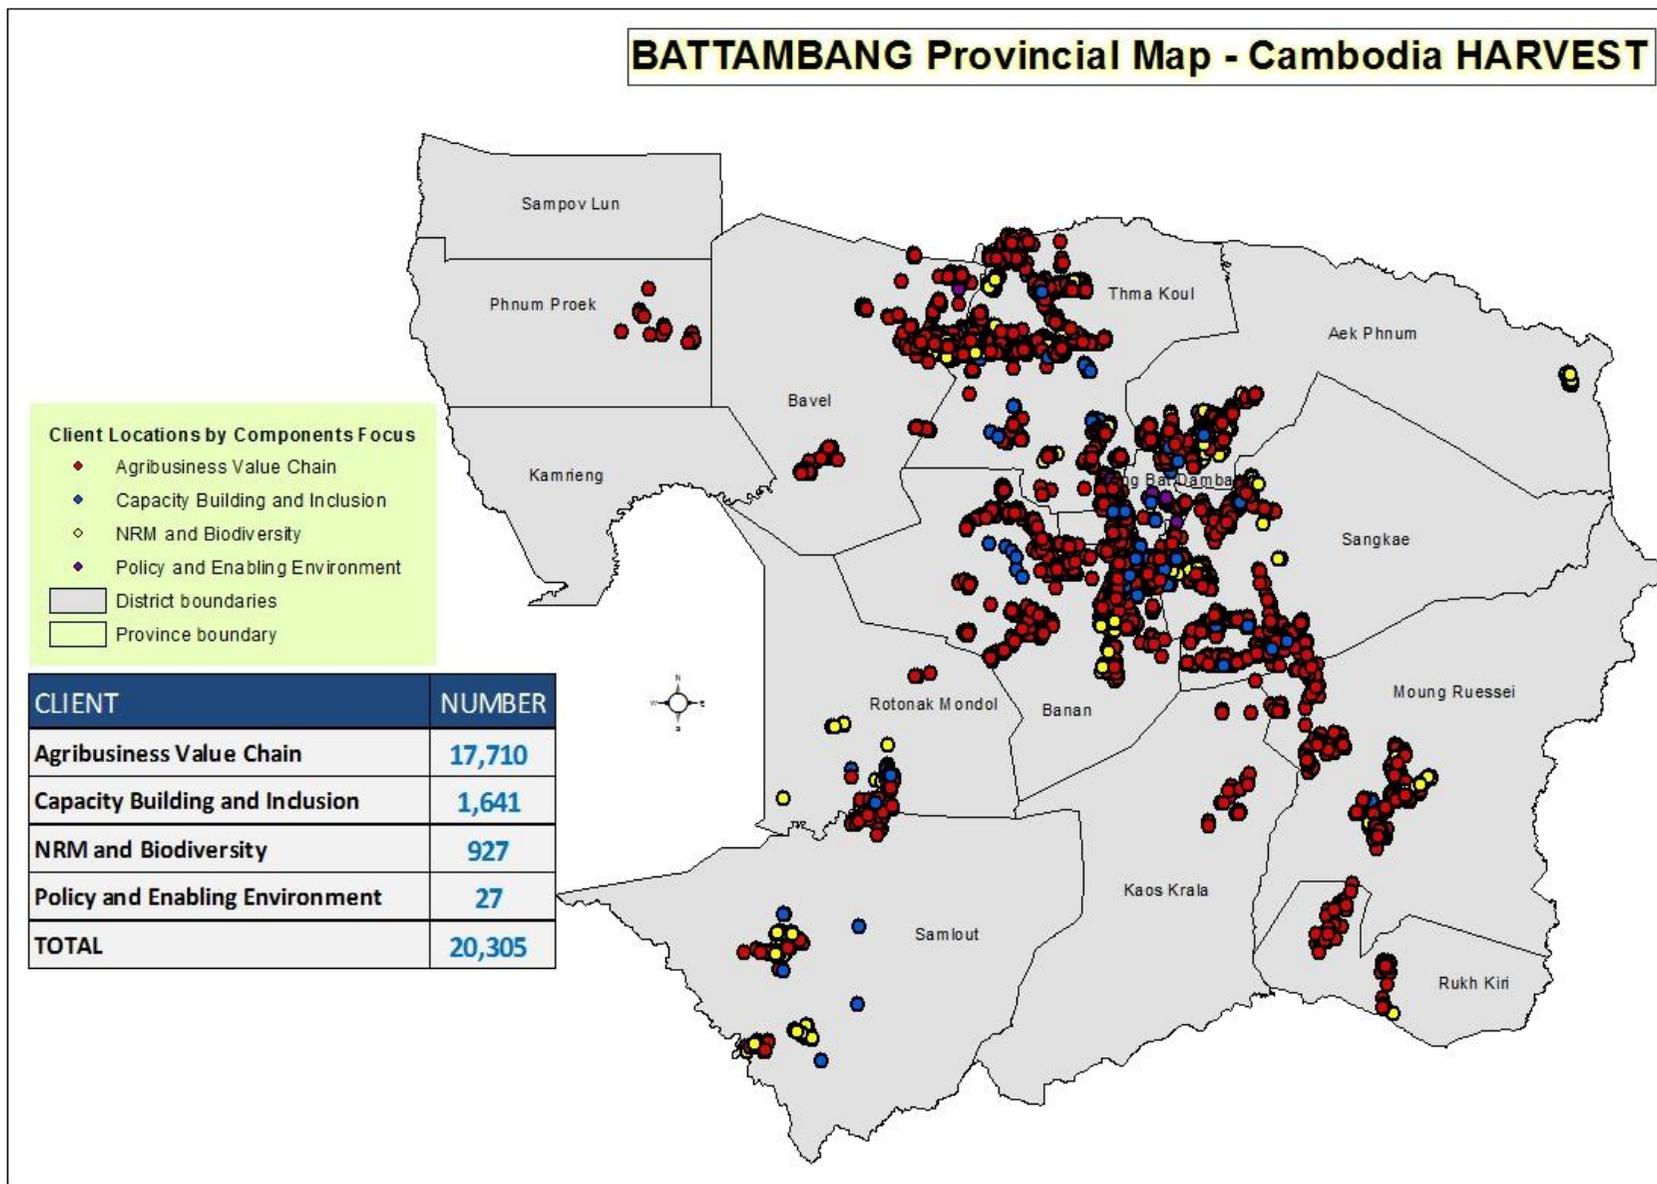

Eang Saray, an aquaculture client in Siem Reap province, uses a stack of notebooks to record a range of projections and data. “Before we even stock the pond, we have a good idea of what will happen during the growing cycle,” she said. This procedure has minimized the chances of loss and empowered her to better manage her limited resources. “I'm more confident and less afraid of what will happen,” she said.

Eang is applying these lessons to other parts of her life. Her vegetable farm now has a business plan, and she keeps detailed records of her household income and expenditure. “Before, we borrowed money without thinking about it,” she said. “Now, we're much more cautious with our finances.”

Cambodia HARVEST • Snapshot • September 2015

ANNEX V: PROVINCIAL MAPS

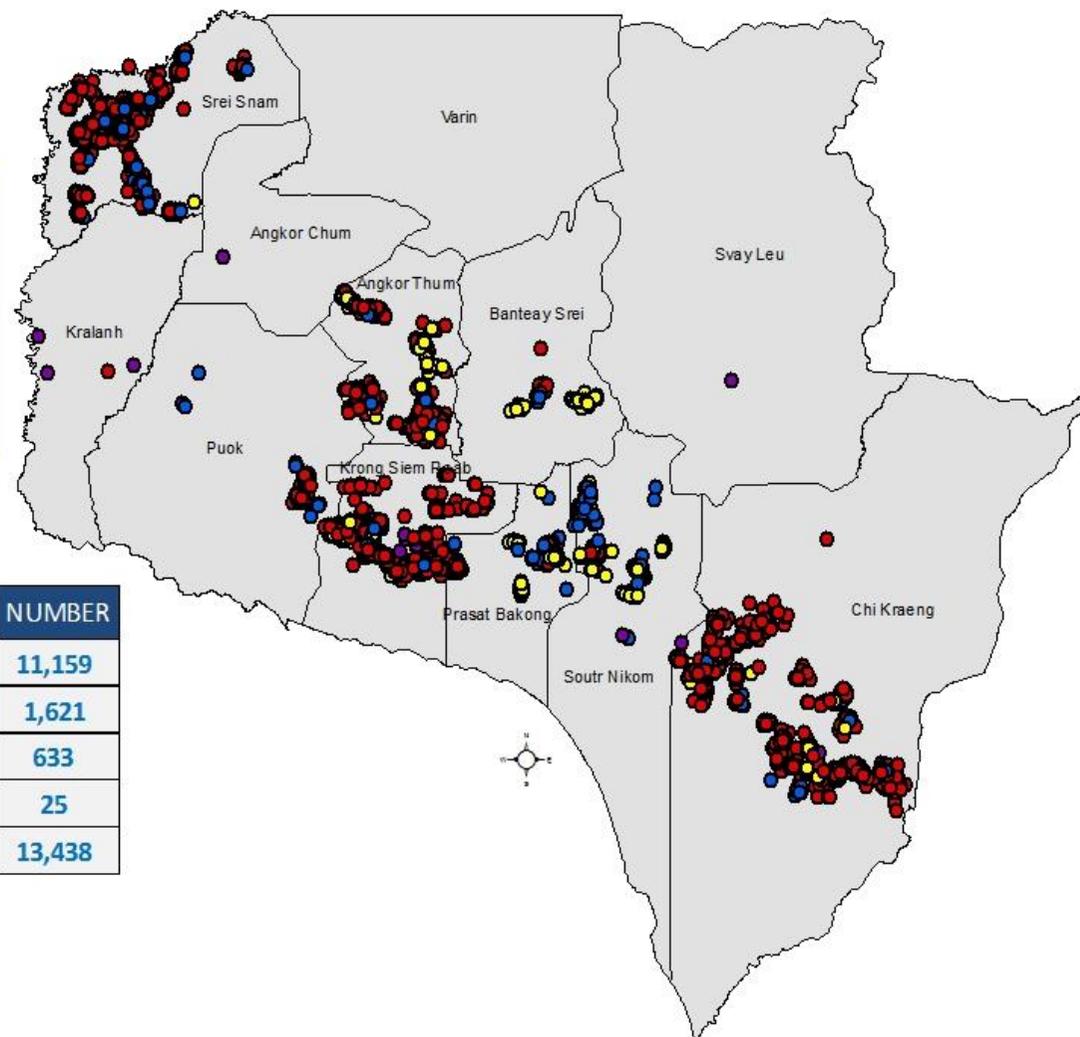

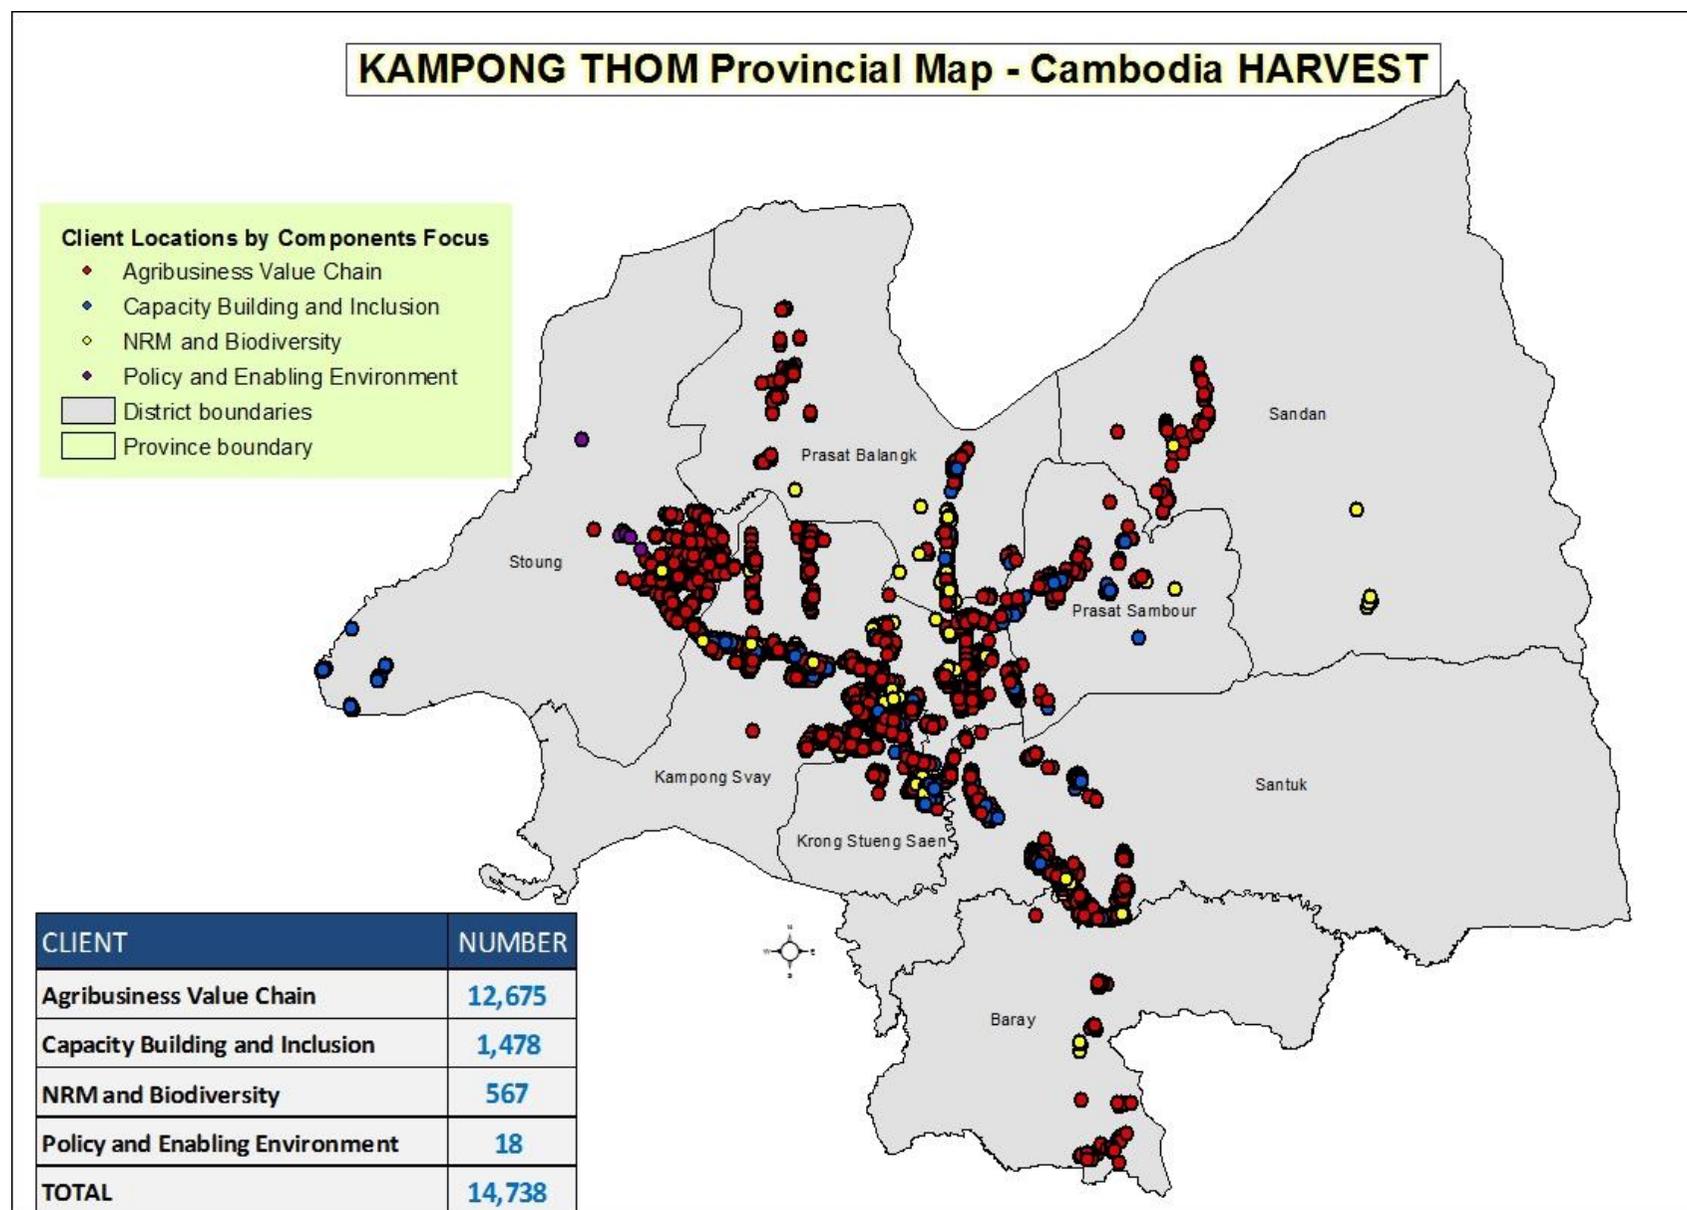

SIEM REAP Provincial Map - Cambodia HARVEST

Client Locations by Component Focus

- ◆ Agribusiness Value Chain
- ◆ Capacity Building and Inclusion
- ◆ NRM and Biodiversity
