SUBJECT: Evaluation of Grants AID/csd-3289 and AID/pha-G-1131,  
Planned Parenthood Federation of America,  
Family Planning International Assistance (FPIA)

25

## I. Summary and Conclusions

FPIA's performance during the past year has improved progressively, with implementation of the major recommendations of last year's comprehensive evaluation by Columbia University, improved management techniques of subgrant administration, the filling of all technical staff positions, and AID-FPIA agreement on FPIA policy direction and program emphases. Some problems with timely proposal submissions and field-headquarters communications still exist, but FPIA is fully cooperating in attempting to solve them.

During the past year, FPIA has continued to provide assistance primarily to church-related organizations, (approximately 60% of all sub-projects are to church-related organizations), although under the new grant effective October, 1975, it is authorized to provide contraceptive commodities to LDC government agencies as well as to private groups. FPIA's major strength continues to be its ability to identify and develop innovative, cost effective projects with key action groups in the LDC's. AID has worked with FPIA to foster several new directions:

1. FPIA has increased its emphasis on service programs, first, through promoting and supporting nonmedical means of distribution of contraceptives, and second, through encouraging the integration of voluntary sterilization, particularly minilaparotomy, into family planning programs.

2. FPIA has developed new projects with key LDC women's organizations, involving them in family planning, with the corresponding advantages of the woman to woman approach and the cost effective utilization of women volunteers.

3. FPIA is increasing its efforts to gain larger contributions of local support for projects and to phase out FPIA support as expeditiously as possible, maximizing innovative programming and minimizing long term dependence on FPIA funding.

# BEST AVAILABLE DOCUMENT

Buy U.S. Savings Bonds Regularly on the Payroll Savings Plan

4. FPIA is exploring new means to expand its commodity distribution program by working through church-related and other voluntary agency channels to identify potential distributors. It has recently issued a mass mailing to about 4,000 LDC individuals and institutions to solicit orders for contraceptive and informational materials.

5. Organizationally, FPIA has finally defined its staff needs, filled all its grant authorized positions, and established field representatives in the 4 LDC geographical regions. A new Director, Dr. Richard Derman, was appointed in September, 1975.

6. Concentrated efforts are being made to improve what were often inadequate communications between the field and headquarters. Progress reports from sub-grantees are now systematically answered by the relevant technical backstoppers in New York, FPIA field representatives have been delegated greater responsibility in routine sub-grant management, and sub-grant proposals and disbursements are being issued in a more timely and efficient manner.

## II. Background

An evaluation of FPIA was completed by the International Institute for the Study of Human Reproduction, Columbia University, covering the first 3 years of Grant AID/csd-3289, in February, 1975. This evaluation, by the AID Project Manager, focusses primarily on FPIA's performance during the past year.

From June 30, 1971 through September 30, 1975, AID provided a total of \$13,500,000 to FPIA under Grant AID/csd-3289. In addition, 9,000,000 monthly cycles of oral contraceptives and more than 240,000 gross of condoms were granted in-kind. A new grant, AID/pha-G-1131, (and new PROP) became effective October 1, 1975, at which time \$3,500,000 was provided to FPIA for family planning activities for one year. The new Grant also provides for an in-kind contribution of 6,000,000 cycles of oral contraceptives and 300,000 gross of condoms.

In December, a Congressional Notification to allow the addition of \$1,500,000 to the Grant and a PIO/T for the first tranche of \$726,000 were prepared by the Population Office and sent to PHA and PPC for clearance. 1/

1/ Two revisions to the Notification documents were requested and completed by this Office within a total of 3 days, but Notification was not issued until early April, despite continuous requests by the Office of Population. This long delay, preventing additional funding obligation for four months, has seriously impaired FPIA's ability to fund new projects supported by the field and AID/W as well as disrupted program continuity.

### III. Purpose and Objectives

FPIA is successfully achieving its purpose, as stated in both the new and old grants, of providing material, financial and human resources for the support of family planning activities resulting in the initiation, continuation and expansion of voluntary family planning services in the developing countries. The following is an evaluation of FPIA's performance in meeting its five specific objectives.

Objective 1: To provide contraceptives, supplies and equipment and financial support for the initiation and expansion of organized family planning services.

FPIA has successfully carried out this objective, due to the organization's emphasis on provision of services as its key priority task, and its ability to channel services through able, cost effective LDC voluntary organizations, particularly church and women's groups.

Because of its special relationship with church organizations, FPIA has a unique capability to provide services to individuals, organizations and countries which would otherwise not be reached through bilateral or other donor channels. For example, FPIA is providing family planning materials to the 265 Christian Medical Hospitals in India and has the only family planning service programs permitted to operate in Peru - with two church organizations. In the Philippines, FPIA supports a family planning service program through the Iglesia Ni Cristo which had a cumulative total of 215,236 new acceptors as of December 31, 1975. This program not only has an exceptionally high acceptance rate, it also has one of the highest continuation rates ever recorded - 90% - and the cost per acceptor is only \$3.00. <sup>1/</sup>

FPIA has also developed a special capacity to work through women's organizations in the developing countries, capitalizing on the advantages of the women-to-women approach, largely volunteer organizations which are low cost, and their ability to reach communities and households not served by clinical services. For instance, FPIA supports a program with the Nepal Women's Organization, in which some 215 volunteers provided oral contraceptives to 2,386 couples and condoms to 1,390 couples during the last quarter of 1975. A project with the Korean National Council of Churches served some 40,000 family planning users during its first year at a cost of less than \$1.00 per user, utilizing women volunteers.

FPIA has also taken a leading role in supporting the provision of

<sup>1/</sup> This was confirmed by a recent evaluation by researchers from Columbia University and the Center for Disease Control.

Sterilization services. In the Philippines, FPIA initiated the first voluntary sterilization service in the country, through the Mary Johnston Hospital in 1974. By the end of March, 1976, the hospital will have performed a total of 10,000 voluntary sterilization operations, at the low cost of an average of \$7.00 per acceptor. FPIA is also supporting a sterilization program with the Iglesia Ni Cristo, which to date has performed over 3,000 vasectomies and 100 female sterilizations. Both of these projects now include out-reach teams which travel to rural areas of the country providing sterilization services.

While under the first grant, FPIA was essentially limited to providing contraceptives and program support to private, non-government organizations, FPIA is now authorized to provide contraceptive materials to select LDC government agencies, when appropriate, as well. This has increased their ability to respond to commodity needs on a prompt basis in several needy countries.

Objective 2: To provide resources to family planning programs to assist in training increased numbers of family planning personnel who will staff expanding service programs. Special emphasis will be given to training nurses and midwives to deliver family planning services because of the acute shortage of physicians in developing countries.

Recently, FPIA has supported courses for the training of nurses and midwives in Ethiopia, Indonesia and Thailand. The major training programs for physicians are at the University of Colorado, where some 600 physicians have been trained in family planning (of which 128 received practical training) and at the Philippines General Hospital, where 76 physicians were trained in mini-laparotomy, vasectomy and postpartum sterilization. Of that total, 48 have also been taught laparoscopy, 28 culdoscopy. In Peru, FPIA supports the only training in family planning currently available in Peru, where, to date, 180 physicians have been trained at the Hospital Arzobispo Loayza.

We have had considerable questions about the University of Colorado project, particularly, (1) its cost (\$200,000 per year), (2) its method of participant selection, (3) our preference for establishing training centers wherever possible in LDC's rather than in the U.S., and (4) our lack of sufficient evidence of increased family planning activity by participants following their return to country. In the last two months we have met with Dr. Thomas Moulding, the project director, here at AID/W and requested and received an evaluation of the project by FPIA. We have agreed that the project will be redirected to focus

on Latin American participants, costs will be reduced by more stringent selection of candidates and travel costs will be minimized (participants are only funded from U.S. points of entry) and FPIA will explore the possibility of a training center in Mexico, where a large number of the participants live and practice. A questionnaire has been sent to past participants to solicit information on the effect of the course on their family planning activity.

In the new grant, objective No. 2 no longer includes mention of the special emphasis on training nurses and midwives. It now emphasizes training of all family planning personnel, including other types of auxiliary and paraprofessional workers, in view of increasing focus on non-clinical channels of family planning service delivery.

Objective 3: To provide information, education and communications resources to family planning and education programs to increase the levels of knowledge about and to improve attitudes towards the practice of family planning.

This objective is being achieved through many field projects, often in conjunction with the provision of family planning services. However, due to increasing demand on FPIA funds, FPIA, with AID support, has increased the percentage of its program funds directed towards family planning service delivery, with the inevitable commensurate reduction in funds available for information and education programs. However, FPIA still supports strong programs in this area and of 44 programs currently ongoing, 11 are for information/education, 24 for service, and 9 for training.

FPIA could effectively increase its efforts to inform and educate adolescents in family planning. While bilateral and many other population programs focus on mothers, principally through maternal child health clinics, FPIA has entrees, through the church and other private organizations, to reach young married and unmarried people before they begin their fertility career. One program which FPIA currently supports, and which could usefully be replicated in other countries, involves courses in responsible parenthood which, with FPIA assistance, the Catholic Church now requires for all couples who wish to marry within the church. To date, over 8,000 couples have participated in these courses. FPIA should attempt to develop and establish these premarital courses, teaching sex education and contraception, in other countries, particularly in Latin America.

Other effective programs include a project with Accion Cultural Popular in Colombia, in which family planning messages reach rural

farmers by radio, newspaper and other printed materials, a project with the National Council of Churches of Kenya which informs adolescents about family planning through churches and schools, and a program to develop educational materials for rural farmers using agricultural analogies to explain family planning in the Philippines.

Objective 4: To plan and implement systems of evaluation of program effectiveness as integral parts of all programs where assistance is provided.

The comprehensive evaluation undertaken by Columbia University on FPIA last year found that "evaluation of program effectiveness as an integral part of FPIA assisted projects is weak". As a result, one staff member has been assigned evaluation responsibilities full time and a manual for subgrantees on project evaluation is being developed, to be completed by April. The project manager and FPIA have designed a proposal format so that now all projects submitted for review must include clearly defined objectives, indicators of performance to be measured, and, for continuing projects, evaluation of previous performance. FPIA proposals have improved as a result but FPIA should continue its efforts to ensure that proposals are brief and concise, include evaluation criteria and performance, information on contraceptives being supplied, inputs from non-FPIA sources, phase out plans. Final reports are required on terminating projects.

Objective 5: To the extent possible select for support those projects which are innovative and will serve as models for regional or national family planning programs.

FPIA's record on innovative programs is excellent. They have a keen ability to identify the innovators and leaders in the private sector and provide them with a relatively small amount of funds to move cost-effective programs. Their contacts with church groups and women's organizations enable them to reach those key target groups more successfully than other donors.

They could make more efforts to replicate their model programs in other countries, such as the Philippines, Iglesia Ni Cristo Project -- community based distribution model, the Costa Rica CIF program --- - information/education for premarital couples, and the Philippines Mary Johnston Hospital program - - rural outreach sterilization team. FPIA is taking a positive step in this direction with plans to send Dr. Oblepias of the Mary Johnston Hospital to work with the staff surgeons of the Christian Medical Association of India, so that the

church hospitals will begin doing mini-laparotomies on a wide-scale basis as a result.

#### IV. Project Administration

Because FPIA's budget has levelled off in the last year, FPIA is mainly locked into continuing ongoing programs, and does not have significant funds available for new initiatives. This has required that the staff reorient its emphasis. In the past, project development was their major activity, and major strength. During the last year, with strong A.I.D. prodding, they have had to focus on maintaining ongoing projects since most of their funds were committed to ongoing activities - - provision of technical assistance, timely monitoring, effective management practices (getting continuation proposals in on time, ensuring checks reach the subgrantees when they were supposed to, etc.), and working on phasing out and terminating projects. This was not an area of strength, although monitoring and management seem to have been improving during the last few months, partly due to what will hopefully become an unnecessary amount of heavy policing from the Project Manager.

FPIA has some excellent innovative projects, supported by the relevant USAID's, for which funds are not currently available under the grant. Additional funds subject to project by project approval by AID could be well spent by FPIA on more innovative projects.

For the present, FPIA, in view of inadequate funds for new programs, should continue to focus on improving its management and monitoring of ongoing projects, phasing out where possible, but not where successful programs are going to suffer negative consequences, and not making promises for new programs which cannot realistically be met until additional funds are available. In the meantime, efforts should be made to obtain new funds, not only from AID, but from non-AID sources as well.

#### V. Staffing

During the past year, staff needs have been reviewed and defined, with the result that all 17 FPIA staff positions provided for in the grant are now filled, by representatives of the appropriate technical fields, and regional offices are now operating in each of the 4 LDC geographical areas. (The most recent, in Bangladesh for West Asia, was established in February, 1976). The regional representatives are currently in the process of hiring one staff assistant each, except that the East Asia representative is authorized to hire 2.

In October, 1975, a new Director of FPIA was appointed. AID has had

difficulty reaching him on certain occasions regarding grant related issues, although less in the recent past than early in the Grant year. 1/

## VI. Recommendations

### A. A.I.D.

Additional A.I.D. funds should be provided this fiscal year (making an FY 76 total of \$5 million) to enable FPIA to implement several innovative projects, particularly in the rural areas of Africa and Asia, which are approved by the relevant USAID's but for which funds are currently unavailable under the grant.

### B. FPIA - Policy

1. FPIA should continue to emphasize support to private, voluntary - - particularly church related - - organizations in the initiation and expansion of family planning activities, thereby maintaining the unique capability to reach church and other private groups which it has developed throughout the past four years.
2. FPIA should concentrate on cost effective, model projects which can be replicated and/or expanded and their costs assumed by the relevant local government or private organization within 2-3 years.
3. Training of non-medical family planning personnel and non-clinical service programs should be expanded in view of the increasing need to provide contraceptive information and services to individuals, particularly rural populations and adolescents, outside the range of maternal/child health clinics and hospitals.
4. FPIA should increase its efforts to reach adolescents with family planning and sex education, by supporting premarital courses for couples and other such projects.
5. FPIA should continue its recent efforts to provide support for voluntary sterilization services, particularly mini-laparotomy and vasectomy in view of their proven safety, effectiveness and relative simplicity.

### C. FPIA - Management

1. FPIA should continue to improve its management and administrative practices to minimize bureaucratic holdups and maximize prompt, efficient

1/ Dr. Derman has indicated that, besides the office hours dedicated directly to grant management, he spends 10% of his time on PPFA matters as they relate to FPIA and 10% of his time working in coordination with other donor agencies. Approximately 10% of his time is spent on non grant related activity, for which he keeps separate time sheets, and his A.I.D. paid salary is accordingly decreased.

project proposal submissions, disbursements to grantees, etc.

2. The manual on evaluation for subgrantees should be completed as soon as possible, to provide useful, systematic, uncomplicated procedures for subgrant evaluation.

3. A workshop for subgrantee project directors should be held in Asia, possibly in early 1977, covering project management and reporting, financing, evaluation and project development.

4. Trip reports should be submitted to the Project Manager for all travel undertaken under the grant, domestic as well as international, no later than one month after the travel is completed. Copies of trip reports should be sent to the USAID Population Officer and Population Office regional division when relevant.

5. If the FPIA Director or any other staff member is to engage in any type of non AID Grant activity, careful accounting should be taken and salaries should be prorated to avoid any improper expenditure of AID funds, keeping in mind, however, that the present Grant scope of work calls for 17 full time positions.
