

Activity Title: 53 ESF Transport Grant
Activity Number: 677-0041
Grant Number: AFR-0041-G-55-3022-01
Executing Organization: CARE

Report of Activity: July 26th to October 25th, 1984

Activity Description

The purpose of this grant is to enhance the Grantee's logistical capabilities and to enable the Grantee to carry out effective monitoring of P.L. 480 commodity distributions to catastrophe-stricken areas by providing heavy duty, all-wheel drive trucks, four wheel drive support vehicles and operational funds for all vehicles and the supporting administrative structures.

Implementation

Activity this quarter was minimal because of the coincidence with the rainy season. Although the rains were not of an intensity to block circulation this year, because of advanced planning of several factors, all programs were relatively inactive. Food for Work programming was being carried on in two areas only, the Lake Prefecture and N'Djamena and emergency distributions were very reduced because of the small remaining store of cereals. All drivers were thus given their annual leave this quarter in preparation for the intensive activity due to start next quarter.

As can be seen from the following chart, activity this quarter in emergency distributions amounted to 140 M.T. of P.L. 480 commodities and some 5 M.T. of miscellaneous commodities transported over a total of 8,840 kilometers. In the F.F.W. area, 193 ½ M.T. P.L. 480 and approximately 6 M.T. miscellaneous

.../...

commodities were transported over 13,956 kilometers, thus giving a total of 344 $\frac{1}{2}$ M.T. transported over 22,796 kilometers by the eight trucks composing the fleet.

As for the light vehicle fleet, one of the four vehicles spent a total of 4 weeks in the bush on 2 different field trips, once to assist in distributing P.L. 480 commodities in the Lake and Kanem Prefectures and once to inspect the F.F.W. projects in the Lake Prefecture. Two other vehicles were based at the Lake (Chad) the duration of this quarter in support of the F.F.W. projects there. Finally the garage support vehicle was used to supply logistical support to the garage facility including one repair ~~trip~~ to the bush. A total of 33,429 kilometers were logged on the report of activity.
