JUL 8 1983

MEMORANDUM

TO: AA/PPC, John R. Bolton

FROM: S&T, N. C. Brady

SUBJECT: S&T's FY 1985 Annual Budget Submission

The Bureau for Science and Technology is carrying out the Administrator's mandate to help bring about dramatic increases in the application of science and technology to worldwide development problems. To achieve this, the Bureau is providing science and technology leadership in AID's substantive development sectors, promoting the adaptation of existing technologies along with the creation of new ones, and making significant technical contributions to the Agency's CDSSs, ABSs, PIDs and PPs. At the same time, it is continuing its traditional functions of supporting the Missions' programs through research and technical services provided by S&T projects and direct-hire staff.

In April 1983, the FY 1985 AAPL to fund S&T's DA program portfolio was established at a very tight $295 million. This total allows only 2.2% annual growth in current dollars (or a decline in real terms) since FY 1982, when the Bureau obligated $276.6 million. The $295 million by office:

Directorate for Health & Population:

Health	$ 22.0 million
Population	125.5 million

Directorate for Food and Agriculture:

Agriculture	92.5 million
Nutrition	8.2 million

Directorate for Energy & Natural Resources:

Energy	12.5 million
Forestry, Environment & Natural Resources	5.5 million

Directorate for Human Resources:

Education	6.5 million
International Trng.	1.5 million
Multi-Sector Dev.	12.5 million

Technical Review & Info.: 6.5 million

Small Activities Fund: 1.8 million

By appropriation accounts, 103 (Agriculture, Rural Development and Nutrition) with $123.37 million and 104 (Population) at $121.2 million are the leaders, with $28.325 million coming from 104 (Health), $13.43 million from 106 (Selected Development Activities) and $8.675 million from 105 (Education and Human Resource Development).

S&T has taken several steps to assure that the limited amounts of money allowed are used for those activities of greatest scientific and technological importance which can most effectively implement the Administrator's directives. For instance, strategies have been prepared for AID's principal technical sectors over the past year. These strategies as well as the results of the Agency's recent research priorities exercise are guiding the evolution of the Bureau's portfolio. Some consolidation has proven possible and S&T is also moving toward greater cost sharing with Regional Bureaus and Missions for the technical field services it provides. These latter two moves have met resistance within the Agency and outside it which has limited the Bureau's ability to make changes as rapidly as it wishes to.

At the same time that S&T is tightening its belt where possible, financial demands based on Agency commitments are growing, most notably to the International Agricultural Research Centers (IARCs) supported through the Consultative Group on International Agricultural Research (CGIAR) and to the universities participating in the Collaborative Research Support Programs (CRSPS). These two requirements take $52.8 million and $21.45 million respectively of the FY 1985 budget; 25% of the Bureau's DA total and 78% of S&T/AGR's share will go to IARCs and CRSPs. Those proportions are rising and leave little discretionary leeway either in S&T's agriculture program or within S&T's part of the 103 account. Similarly, though the percentage is lower, U.S. funding for the UNFPA commands a substantial fraction of the declining real S&T/POP budget each year.

Budget pressures also make it more difficult to build rapidly on technical success as it occurs. The recent dramatic progress toward a malaria vaccine is an example. Malaria kills and debilitates more people than any other disease in the world. The AID-financed vaccine will be the first ever developed against a human parasitic disease and the first to use genetic engineering techniques. But adding the $10 million now that could cut several years off its development time is not easy. Some additional FY 1983 funding may be in sight, and S&T will press for more in FY 1984-1985 so that this striking success can be brought to culmination at the earliest possible date.

In building its budget, the Bureau has been acutely aware of the importance of starting quickly on the kinds of new activities mandated by top management, despite the tightness of funds. Certain proposed new starts, for this reason, may appear underfunded. In our view, these will not lead to unmanageable difficulties, though our task would be much easier with additional funding along the lines proposed below.

The most significant unmet budget requirements in FY 1985 -- as determined both by the S&T Bureau itself and from Regional Bureau reactions during reviews of the individual technical office ABSs in June 1983 -- are summarized below:

1. S&T/AGR must have budget relief, starting if possible in FY 1984 and certainly continuing into the future, if it is to move effectively into promising new scientific fields in agriculture such as biotechnology-based advances in crop production. This relief could take the form of more money. In addition, as you know, we are attempting to set a definite pattern for cost-sharing of field technical services between the Regional Bureaus and S&T, although this has met opposition in AID and even more importantly from the university community. However it is done, it is essential that an average increase of $10 million a year be available from now through the decade.

2. Funding for the Memoranda of Understanding (MOUs) and the Historically Black Colleges and Universities (HBCUs) support set in motion during 1982-1983 must be augmented to allow significant progress in these important activities. At the $5 million now projected in FY 1984 and FY 1985 for MOUs and strengthening grants, 22 universities including the 10 HBCUs presently receiving grants will have to be eliminated from the program. (These are the institutions whose average annual AID business now runs less than half a million dollars). Such a cut would clearly be inconsistent with Presidential and Agency policy. To maintain these programs at an acceptable level, we urgently request a minimum increase in each year of $1 million over the $5 million now planned.

3. At the ABS reviews for health and population, there was a nearly unanimous consensus from all Bureaus that these budgets are too small, especially to provide the necessary technical field support. Strong sentiment was voiced in favor of augmenting centrally-funded technical assistance programs. In addition to the malaria vaccine requirement discussed above, the S&T Bureau requests an additional $5 million for health in FY 1985 and $10 million for population. The former would be divided among the strengthening of S&T/H's ability to provide

technical services to the field, follow-on activities to the highly-successful oral rehydration conference (ICORT) in June 1983, and bio-medical research. In population, the bulk would go to population field service intermediaries that have approved sub-activities ready to implement but are hampered for lack of money, with a smaller amount reserved for basic fertility and contraceptive research. In addition, we suggest greater use of the joint funding or "buy-in" mechanism discussed below to implement country population programs, unless Missions can find more efficient means than heretofore to use their bilateral population funds.

4. Beyond the malaria vaccine and other health needs already described, the Office of Health has a special budget requirement for the MEDEX support project. S&T took on technical oversight of this project earlier in FY 1983 at PPC's request, with initial funding of $1.5 million added to the Bureau's budget by PPC. Similarly, $1.0 million will have to be added in FY 1984, $1.6 million in FY 1985 and $0.6 million in FY 1986 to complete the project. These required extra amounts cannot be accommodated within the Health Office's current budget.

5. S&T's collaboration with the Asia and Africa Bureaus in forestry and natural resources, including fuelwood research, should be fullblown in FY 1985, and interest from the Latin America and Caribbean Bureau is likely as well. More funding for S&T will be needed. In addition, in keeping with the Administrator's increased interest in the environment, the Bureau anticipates a requirement for additional funds to improve technical field support on environmental problems and develop collaborative projects with field Missions.

As a final budget note, the S&T Bureau wishes to point out the $1.0 million in ESF funds added to the Energy Office's budget for FY 1984 and again in FY 1985. This item requested by PPC and the State Department is in addition to the funding requested by the S&T Bureau.

Outside the budget, though having obvious implications for it, the S&T Bureau has two particular points to make:

1. Mechanism for Joint Regional Bureau and S&T Funding
With its own budget squeeze -- amply outlined in this ABS -- the S&T Bureau is not able to continue funding as high a proportion of its field technical services as may have been possible in the past. Regional Bureaus and Missions will have to expect to assume a larger share ranging from picking up the travel and per diem costs for TDY visitors from projects whose core funding will be continued by S&T, on the one hand, to providing full financing of sub-project or country activities that use the project design and contracting mechanism of a joint project, on the

other. The latter has come to be called a "buy-in" or an "add-on." There is an acute need for a simple, effective mechanism that will enable Missions to buy in to such collaborative projects without doing their own project design or procurement. S&T is actively working with CM and GC to design mechanisms that will allow this without requiring the transfer of funds from one bureau to another.

2. Nutrition. The S&T/N ABS review produced very strong agreement that nutritionists in the field, at least in key Missions and regional offices, are essential to carrying out AID's new nutrition policy. Moreover, all health and agriculture officers must have in-service training on introducing nutrition components and concerns into their programs. S&T/N will take the lead on these problems but its program and staff are limited; cooperation and strong support from Personnel Management and the Regional Bureaus are essential.

Specific requests for staff in the S&T Bureau will be included in the OE and workforce submissions.
