INTRODUCTION

Impact evaluation in training is not to be confined only to what the trainees acquire from the training courses they attend, but it goes far beyond that in an attempt to measure, or at least to assess the various training outcomes in relation to other training objectives.

Impact of training on work performance; on increasing the effectiveness of the training processes; on application of more advanced training methods and techniques; and developing local capabilities to perform independently and successfully training functions ... all these and more are dealt with in the following impact evaluation study. Training impact evaluation is therefore a multidimensional recording of the total interacting outputs including those anticipated as well as those unexpected.

Accordingly, in the case of this impact evaluation study of BSDS training courses, this multidimensional approach will be applied instead of dealing with each dimension separately due to the time limitation and to analytical practicalities.

Indicators in this impact evaluation study will be derived from the available sources of information and by using a number of techniques which can lead to substantial evaluative conclusions. The following are the main techniques in this study:

1. Analysis training goals and implications for BSDS
2. Study training methodology and expected consequences for BSDS
3. Identification of target groups and functional significance their jobs
4. Study of course curriculums and/or syllabus and their relevance to work prerequisites
5. Study of previous post-training evaluation reports
6. Analytical review of trainees records
7. Trainees feedback
8. Supervisors opinions

Through this battery of techniques it is hoped that this impact evaluation will lead to appropriate assessment of lessons learned for continuous increasing of the effectiveness in future training and staff development programs.

PART ONE
BSDS LD II URBAN PROJECT

BSDS LD II URBAN PROJECT

1. Description

The BSDS activity has been a mainstay of the decentralization program effort since 1982. BSDS is the vehicle for the allocation of annual funds to local government units for capital investment and urban upgrading projects. This component of the decentralization program is designed to improve local government capability to plan, budget and implement basic services to lower income neighborhoods and constituents.

As such, the LD II Urban BSDS effort has enabled districts to comprehensively address urgent service needs based upon district priorities and district capital development decisions.

2. Goals and Objectives

There are two major goals for BSDS activity:

- a. Provide technical assistance to GOE staff at both the governorate and district levels for the purpose of capacity building in the fields of planning, designing, budgeting, accounting, contracting and implementation of a capital improvement program.
- b. Institutionalize planning, budgeting and implementation phases of facilities maintenance program.

Conclusion:

The primary focus as indicated from these two goals is staff development. The first goal is very specific with regard to this focal point in stating that technical assistance is provided for the purpose of capacity building of GOE Staff.

3. Methodology

Applied methodology in BSDS is also focussed on personnel/staff development as indicated very clearly in the following methodology:

- a. Review, monitor and aid governorate and district level personnel in implementing a large number of sub-projects to improve the living conditions of the urban masses in low income areas
- b. Foster technology transfer to take place at the GOE work sites (On-the-Job Training; OJT) usually on a one-on-one basis during visits by BSDS Team
- c. Conduct pre-planning seminars covering new criteria for both the Maintenance and Investment plans. Participants include all chiefs of engineering and planning follow-up, as these are the officials who will be directing the district and governorate personnel in preparation of these plans.
- d. Participate in sub-project rating program to assess quality of design and construction; evaluate level of usage and facility maintenance and utilize the computer in developing comparison of scores between districts and between sectors.
- e. Assistance to districts and governorate in preparation of the Investment and Maintenance plans (which is actually OJT) constitutes a major effort for the BSDS Team.

Conclusion

Both the BSDS principle goals and methodology indicate that training and/or capacity building of governorate and districts staff/personnel are actually the ultimate goal of BSDS. This significant LD II component is highly training dependent from the first intervention since staff development and/or capacity building is the way to ensure the decentralization and institutionalization processes of basic services delivery at the local levels.

4. Target Groups

To achieve the BSDS principal goals the following groups were identified as being the back bone in implementing and maintaining an locally established basic services delivery system.

- a. Governorate planning, engineering, and finance personnel
- b. Members of district executive councils including districts chiefs, heads of financial, planning, follow-up and engineering departments.
- c. Members of Local Popular Councils.

Conclusion:

It is needless to state that these three groups are the most responsible officials/personnel for the performance of BSDS most critical functions related to the basic services urgently needed for lower income neighborhoods and constituents. The term basic services in this context encompasses those essential services such as potable water, sanitation, roads, public health, social - health - educational facilities ...

PART TWO
SELECTED BSDS TRAINING COURSES
FOR THE
IMPACT EVALUATION STUDY

SELECTED BSDS TRAINING COURSES

Out of 16 BSDS Training courses, eight were selected for this impact evaluation study. Criteria of selection were their importance regarding decentralization program and also the time elapsed (more than six months) since the implementation of these selected courses. Hence, it is anticipated that by now the knowledge, skills, work techniques and required favorable work attitudes and habits which the trainees had acquired through the training processes are reflecting on the work standards of performance.

The following is a brief summary of these courses including in general terms the curriculum contents of each course:

1. *NUS* **Construction Management (PLAN/DESIGN)**

Analyzes stages of project construction; planning preliminary design; detailed design; construction; and delivery. Discusses methods of procurement of appropriate resources at each step.

2. *NUS* **Construction Management (MONITOR/EVAL.)**

Analyzes steps in planning and scheduling each part of the construction phase; introduces monitoring as a process for assessing progress; identifies problems; proposes changes in construction scheduling and/or scope of the project; and introduces preliminary scheduling procedures. Some discussion of evaluation and rating constructed facilities.

3. *NUS* **Budgeting and Finance**

GOE general budget and the local administration budget; local revenue; methods of analysis, estimating and scheduling project costs; laws and regulations governing tenders, bids and procurement of foreign goods, reporting systems; tailored case studies, and review of law No. 9 and its applications to USAID program. Application of microfilm computer in budget and finance department.

4. *LD II* **Quality Control of Plain and Reinforced Concrete**

Review of types of cement; aggregate classifications, sieve analysis, sampling and testing; curing process, water-cement ratio and testing of concrete (i.e slump, compression, and flexural); design of mixes; inspection of reinforcing bar emplacement; inspection of form work (shuttering) for both efficiency and safety, inspection of shoring for beams, girders and slabs (both function and safety) acceptable tolerances in reinforced concrete in construction of small projects.

5. *LD II* **Design and Inspection of Elec./Mech. Components in Small Buildings**

Review of sanitary, lighting, power and other mechanical/electrical equipment and systems in small buildings. Includes water/waste water hookups; fixtures in latrines; vents, floor drains, meters, traps and other sanitary appurtenances, principles of interior and exterior lighting; design of lighting and power circuits; selection of main panels, and ventilation in small projects.

6. *LD II* **Design and Inspection of Foundations for Light Construction**

An engineering workshop for civil engineers who will be responsible for designing and inspecting foundations for small structures constructed under the LD II Program Topics include:

- Review of fundamentals of soil mechanics; types and properties of various soils; identifying and testing soils in both the field and laboratory.
- Interpretation of soil boring logs and records

SELECTED BSDS TRAINING COURSES

- Design loads on foundations
- Isolated, wall, and combined footings, design procedures
- Brief discussion of raft or mat foundations plus pile theory (concrete, steel, composite, etc.) including caps and cutoff
- Inspection of excavation including dewatering and shoring of sides, as required
- Inspection of rebar emplacement in foundations; check of bar sizes, spacing, bends, and cover.
- Inspection of concrete emplacement in foundations
- Acceptable tolerances.

7. Seminar on Management and Behavioral Skills (for GOE Government Executives)

Local government structure and relationship; management of local government resources; decision making; problem solving; management practices; report writing; evaluating strategies.

8. Leadership Skills for Popular Council Members

Local government structure and relationships, popular rights and duties resolution drafting; role of the council in planning and monitoring; management of self-help projects; public expenditure process; review of special funds for development.

Conclusion:

From the standpoint of training courses and target groups selection three valuatve indicators can be noted:

1. The curriculums of the core courses mentioned above meet very important BSDS training needs as derived from the analytical review of BSDS principle goals and their achievement requirements.
2. The target groups for whom these courses were designed and implemented are the most influential and decisive staff members in the districts organizational structures with regard to the major BSDS functions: (i.e planning, implementation, management, follow-up and financing BSDS sub-projects).
3. Further analysis of the curriculums indicate that they cover the four main areas in staff development:
 - a. Cognitive and/or updated functional knowledge
 - b. Skills development
 - c. Problem solving
 - d. Work attitudes or habitual behaviors

PART THREE
ASSESSMENT OF BSDS TRAINING
COURSES OUTPUTS AND EFFECTS

ASSESSMENT OF BSDS TRAINING COURSES

Evaluation in this study is of the summative type. Therefore, it will serve only for future refinements and promotion in performing training functions.

Emphasis in the summative evaluation is made on two major outcomes:

- The effects of BSDS Training on work performance staff development, institutionalization and the decentralization process.
- The outputs of BSDS training which are the specific products of the training activities. Examples of these outputs are: a) development and application of untraditional training methods; b) production of trainees manuals; c) production of trainers manuals; d) applied technical and managerial reports are also considered important.

A. BSDS Training Courses

The eight BSDS training courses selected for this impact evaluation study are classified as follows:

1. Two courses in construction management: For engineers, architects and surveyors working in different engineering departments in governorate, cities and districts.

The major training objectives of these two courses are:

- Providing the participants with the basic information for better understanding the project management processes.
- Upgrading project practices and work skills of trainees in planning and design of construction projects.
- Providing trainees with basic and up-to-date knowledge and information in planning, scheduling, monitoring and evaluating projects
- Upgrading trainees work habits and skills through a variety of exercises and site visits.

The two courses were implemented in five urban governorate and Cairo was not included. This does not mean there was not a need in Cairo for training its engineers in these areas. The courses were offered in Cairo during NUS and repeats were not requested by Cairo Governorate. Most probably that the need is not felt in such a huge cosmopolitan city where numerous top priority needs are grappling and some of them fail to persist. Such condition may need special techniques to arouse. The awareness of the clamorous training needs in Cairo governorate where basic services delivery systems on the neighborhoods level need prompt consolidation.

In the other five urban governorate (Alexandria, Giza, Port Said, Qaliubia, Suez) 61 trainees attended these two courses. Distribution of trainees by sex showed that 37 (61%) were males and 24 (39%) were females. It is also observed that all the trainees are selected from the occupants of grades 3 and 4 in the Egyptian job structure. Grade 4 is for beginners while grade 3 is usually occupied by those with work experiences range between 3 - 10 years in their career.

Indicative Conclusions:

Five valutive indicators can be derived from the above mentioned illustration regarding these two courses:

ASSESSMENT OF BSDS TRAINING COURSES

First: The target groups in these two courses are most effective and indispensable staff members for maintaining any appropriate basic services delivery system. Therefore, to be given this top priority in TAC training scheme is in itself an indication of sound and effective training.

Second: The trainees in the two courses are the engineers, architects and quality surveyors working in different engineering departments from all the three levels of the governorate organizational structure (governorate - cities - districts). This is also another indicator of sound training policy which aims at assuring the unified conceptual understanding of work responsibilities and developing the joint professional language among the members of each heterogeneous working group on all structural levels, thus, enhancing the harmonious performance and avoiding difficulties of communication between team members.

Third: The objectives of these two courses as defined, indicate a comprehensive planning approach to training. The two courses aim towards integrated trainees development in the three interacting components of professional growth and change (cognitive, practical and habitual).

Fourth: Women are occupying at present a substantial portion of the engineering jobs which is a highly professional career. This coincides with the successful accomplishments of the Egyptian women striving to achieve equality with men.

Fifth: It is also indicative that the training in these two courses focussed on two important categories: a) the juniors for effective pre-service or work commencement briefing; b) those with experiences of middle term duration as a technique of learning while doing and upgrading standards of performance through self evaluation which was one of the techniques applied in these two courses in what was called sub-project rating (scoring) exercises.

Drawback: However, one drawback was noted with regard to training duration. Each of the two courses was implemented in six days which are not enough time for such multi-technical curriculums. Suitable prolongation of the training duration should be studied carefully for future planning of training courses.

- Budgeting and Finance course for personnel** working in financial departments in governorate, cities, districts and public services departments. The major goal of this course is raising the standard of performance of the staff members working in the financial departments at all levels of local government units through updating their knowledge, developing their competence in budgeting and in the application of financial by-laws and regulations. In this course which was implemented in the six urban governorate including Cairo, 231 staff members were trained. The duration of training ranged between 8 days in some governorate and 9 days in the others.

Indicative Conclusions:

First: Among the 231 trainees 99 are females constituting 43 % of the total trainees number which indicate that TAC BSDS training is giving considerable attention to the training of women as they are increasingly joining the Egyptian labor force. This is a principle which was emphasized in the Egyptian constitution as well as it is in itself a necessity to increase the effectiveness of the participation of Egyptian women in national development.

Second: This training course is of vital importance. It meets one of the most critical training needs because financial and budgeting functions are considered one of the most important supportive tasks without which the engineering and technical work cannot be accomplished or materialized. Therefore, this course is considered one of the core training courses in the TAC training scheme.

ASSESSMENT OF BSDS TRAINING COURSES

Third: The course combined three levels of trainees (junior, semi-senior, and senior). Each of these three categories was presented in substantial numbers. In principle this is considered a positive aspect of the course because it strengthens the working teams cohesion and builds up a sympathetic understanding and exchange between the different working generations.

Fourth: One drawback was noted that among the 231 trainees there were 35 constituting 16.4 % who are not high education degrees holders. They were intermediate education graduates. This presents a cognitive lag between the two groups attending the same course which was designed on the assumption that all trainees are higher education graduates. In such a case a cognitive introductory course for the intermediate education graduates would help narrowing the gap between the two groups.

Fifth: Another good indicator was noted with regard to the trainees group composition in this course. The course combines all levels in the line of authority starting with top management represented by 15 members from grade 1 jobs to middle management represented by 41 members from grade 2 jobs, down to 125 from grades 3 and 4 jobs which are generally considered the junior group working under the supervision of the first two groups. This in fact reveals a number of healthy conditions in BSDS Training: a) the democratic climate of training; b) the cohesive character of the organizational structures on the local governorate levels specially with regard to what is known organizationally as the line of authority; c) the wide range of bottom-up and up down exchange of views and experience sharing. Such training process can always strengthen the "we" feeling among the members of the working groups on all the levels of the jobs structures in any organization.

3. Quality Control of Plain and Reinforced Concrete

The main objective of this course is to increase the efficiency of the trainees in supervising construction and quality control of concrete structures with emphasis on concrete skeleton above foundation. The course provides trainees with basic information regarding inspection of each part of the structure during construction in addition to the required tests for quality control. This gives the trainee the confidence in accepting or rejecting work of the contractor during construction. In addition, the course assists the trainee to supervise concrete structures efficiently so as to have the finished structure in accordance with the designers drawings and requirements.

Therefore, to coincide with its objectives the course main target group was the field engineers and the training materials tend to be basically operational and practicable rather than cognitive. The number of trainees attending in this course were more than two hundred engineers; 190 of them are college of engineering graduates holdings B.S.C degree in engineering while 35 are graduates of intermediate technical schools. Hence, it may be necessary to have the intermediate graduates receive a more extensive and lengthy separate course if they have to catch-up with the theoretically more advanced background of their B.S.C holder colleagues.

Indicative Conclusion:

First: This course is significant in the area of concrete quality control especially when there is such an immense construction movement taking place all over Egypt.

It is a BSDS top priority need to make the best use of such training courses to maintain adequate and permanent engineering field quality control of the rapidly ongoing construction activities at the district and neighborhoods levels in urban Egypt.

ASSESSMENT OF BSDS TRAINING COURSES

Second: Female trainees percentage in this course is slightly over 27 % which again reflects the fact that even in the field operations, women engineers are playing an active role. Therefore, their participation in such training course is desirable.

Third: This course should be considered one of the core courses which should be locally institutionalized for it meets one of the vital community needs to ensure the safety of the new buildings construction on location.

4. Design and Inspection of Electrical and Sanitary Elements

The main objective of this program is to provide the engineers of limited experience who are working in studying, following-up, inspecting, testing and skills maintaining buildings with the knowledge and related to the design, formulating of contract specifications and conditions, evaluating the tenders and inspecting and testing procedures for small buildings.

It is worth noting that in the design of this course criteria to evaluate its effectiveness were specified as follows:

"At the end of such a course, a trainee would be able to:

- o Design the electrical and mechanical works
- o Formulate these designs into definite specifications presented clearly in tender
- o Evaluate the different tenders for executing these works
- o Follow-up the works of the contractor within their contracts.
- o Inspect and test the completed works against the preconditioned and specifications.

The duration of training in this course ranged between 4 to 6 days. The total number of trainees attended the course was 142. Thirty one of them were females and 101 were males. The great majority (133) were engineers holding B.SC degree in engineering. 70% of the trainees are from the grade 3 job category.

Indicative Conclusions: There are quite few indicators which give this course a certain uniqueness:

Among these indicators are the following:

First: The planning of the course included the criteria which can be used to measure the effectiveness of the training process. These criteria are what have mentioned above under the expected behaviors of a trainee at the end of the course.

Second: The same abilities expected to be acquired by the trainee at the end of the course if tested and found to be acquired would also serve as accurate measurements of the training impact on work performance.

Third: The training techniques applied in this course were highly inter-related to work performance. These techniques were aimed at helping the trainee:

- a. To understand the scientific and practical basis for his job and not just to provide the trainee with new theories or up-dating his/her theoretical background.

ASSESSMENT OF BSDS TRAINING COURSES

- b. To compare between what he/she is doing and what he or she must do, and consequently to determine the obstacles and problems he faces in performing his tasks.
- c. To deal successfully with related problems in practice. This is done through work guides and exercises as experiences which can be perused if suitable in practice.

Hence, this course is considered one of the most effective in-service training programs since the focus is mainly on how the trainee's present job should be done and on what scientific and practical basis.

5. Design and Inspection of Foundations for Light Construction

The target participant of this course is the civil engineer who is responsible for designing and inspecting foundations for light construction. The topics of this course were previously stated in part two of this report. However, for purpose of implementation and preparation of training material they were phrased in the final course plan as follows:

- Engineering Properties of Soil
- Site Investigations
- Shallow Foundations
- Piled Foundations for Light Structures
- Soil Improvement by replacement
- Choice of Suitable Type of Foundations
- Lateral Earth Pressure and Retaining Walls
- Stability of Slops for Foundation Construction
- Dewatering and Lowering of Ground Water
- Some causes of Failure of Shallow Foundations

Indicative Conclusions:

First: This phrasing of the course topics revealed again the functional and practical trends of TAC training to reflect positively on the work performance rather than elaborating on the theories which neither the duration of training nor its objectives allow. The BSDS training courses are meant to supplement not complete work of the academic basis of the trainees which is the role of colleges academic and schools. Instead, these courses focus on the application of the academic knowledge to specific work tasks assigned to each group of trainees by virtue of their jobs or positions responsibilities and duties. However, upgrading in some areas of knowledge is included in the curriculums whenever it is found necessary.

The number of trainees who attended this course was 115 engineers, 77 were males and 38 females.

ASSESSMENT OF BSDS TRAINING COURSES

Second: The duration of training in this course ranged between 10-12 days.

Third: Most of the trainees (101) were occupants of grade 3 jobs which means that the attention was given to the fieldwork engineers. The number of trainees occupying grade 2 jobs was 10 and only 1 from grade 1 representing top management. The composition of the whole group as such is well balanced from the hierarchial point of view.

Fourth: All the group are B.S.C engineers. Thus, homogeneity of the kind and level of educational was obvious in the selection of the trainees for this course. This fact assures effective and harmonious interaction between the participants.

Fifth: Among the total number of trainees (115), 77 were males and 38 females. The percentage of females was 33 % which means again that the role of women in this kind of important specialized area of construction is not minor on the contrary it is considerably effective and their participation in the other training courses is also reasonable and reflects their interest in promoting their professional competence.

6. One course in a seminar format was planned and implemented for executive leadership in the executive councils. The number of participants attending these seminars reached 244 including General Secretaries; Assistant General Secretaries; Chiefs of Districts, cities and towns; Deputy Districts Chiefs, General Managers and Heads of Departments. The duration of training ranges between 5 to 7 days.

Indicative Conclusions:

First: The major topics which were dealt with in these seminars were mentioned before in part two of this report presenting the general frame of the course syllabus. Within this frame however, more specific subjects were emphasized such as:

- Local Administration.
- Administration disintegration and its influence on the efficiency of local units.
- Administrative Operations and human behavior.
- Delegation of authorities and responsibilities.
- Personal contacts among people in the localities.
- Social feasibility studies for local urban projects.
- Problems of local services administration and solutions.
- Decision making.

Here, again the seminar focussed on the practicalities more than on theories.

Second: The great majority of participants were from the top managerial group which give these kind of training special significance. It is of vital importance to keep this group motivated and continuously oriented to be able to recognize, accept and deal efficiently with the rapid socio-economic changes which are the distinctive attribute of our present time.

ASSESSMENT OF BSDS TRAINING COURSES

Third: 28 participants presenting 11.5% only were females. This may indicate that the higher the level of leadership the lower the percentage of women.

Fourth: Out of the 154 participants whose educational background was specified in their seminar registration forms, the following table presents their distribution by percentages according to their professions as indicated from their majors in education.

Social Development	34.4 %
Engineering	26.6 %
Commerce	20.8 %
Agronomy	10.4 %
Political Sciences	7.8 %

This finding indicates that the executive urban leadership are educationally well prepared to understand and cope with the urban local community needs.

7. One course was designed also in a seminar form for popular council leadership. The duration of the seminar ranged between 5 and 6 days. The total number of participants is 479 (454 males and 25 females). The most of the curriculum syllabus focussed on the role of popular councils in planning, monitoring, follow-up of special funds for development and the relationship with the executive councils.

Indicative Conclusions:

First: The presentation of women in these councils is minor (5.2%). This indicates that the presence of women is not enough in important popular councils and thus they cannot directly influence the processes of decision making.

Second: More than 50% of the participants are not holding government positions. They represent a wide range of private business. Among them there are lawyers, physicians, dentists, pharmacists, owners of factories or companies, merchants, contractors, farmers and other occupations. Thus, the seminar presented coincidentally a dynamic, democratic and healthy interaction between the participants who are found to be almost equally representing the two nation sectors (government officials and citizens from all sorts of private occupations).

B. Continuation of Training and Staff Development Processes

One of the main principles in training is the continuation of the staff development process as the need to acquire new knowledge, skills and attitudes becomes evident. Updating of staff functional knowledge and upgrading of their work performance is a continuous and integral part of the managerial responsibility.

To assure continuation of training process TAC had developed and applied a battery of effective methods among them the following are most significant.

1. Production of a series of trainee manuals (one for each course). The purposes of producing these manuals are several:

ASSESSMENT OF BSDS TRAINING COURSES

- a. They serve as texts for the training courses as they are distributed to the trainees just before the beginning of the course sessions;
- b. Trainees can use them when they go back and resume their tasks as post training references in the subjects which are dealt with;
- c. Utilization of the educational material included in each manual can be expanded to assist those who do not attend the courses, thus more staff members can benefit from these materials through which is called sometimes "self training" process.

Nine manuals were produced for nine Basic Services (BS) courses, and five for Local Administration (LA) courses. The following table of contents of the trainee manual which was produced for one of BS courses mentioned before "Construction Management (Monitor/Evaluation) for Engineers" is highly indicative of the usefulness of these educational references.

Part One includes an introduction defining construction project concept and problems.

Part Two deals with planning and scheduling construction projects including objectives, participants, methods and activities.

Part Three deals with the basic concept of network construction; objectives; conventions used in construction of networks; events; and floats and critical path.

Part Four tackles monitoring and control including the planning/control interference; the need for updating; objectives of control; participants progress control; quality control; economic control.

Part Five deals with communication including personal relations; communication media; project meetings and progress reports.

Part Six handles the subject of project evaluation including illustrating the term feed back; project evaluation objectives and evaluation teams.

Appendix A in the manual is also highly important for it contains seven exercises which really help trainees to comprehend the practicability and applicability of the manual cognitive parts.

Appendix B also is significant for it contains samples of forms:

- A. Project close-up form.
- B. Financial and implementation follow-up form.

It also includes two sub-project implementation and operations rating forms.

Indicative Conclusion:

Such carefully and comprehensively produced of trainee manuals leaves no doubt that they present a highly usefully written material, effective support to the training courses and post training valuable references.

ASSESSMENT OF BSDS TRAINING COURSES

2. By carrying out intensive on-the-job-training activities. BSDS efforts are continuing towards the goal of total institutionalization. Therefore, emphasis during 1991 was focussed on the job training for governorate planning and follow-up staff to enable them to take over control of all of the assessment, monitoring and rating functions. The BSDS Team provided continuous on-the-job-training during field visits. On-the-job training activities during these field visits were achieved the following out comes:
 - a. Building-up closer working relationships between the executive and popular councils and among districts and governorate service directorates.
 - b. Institutionalization of planning, budgeting and implementation phases of facilities maintenance program.
 - c. Coordination of district/governorate efforts in gathering and compiling data for needs assessment studies.
 - d. Capacity building of both governorate and district levels in the fields of planning, designing budgeting, accounting, contracting and implementing a large number of sub-projects meant to improve the living conditions of the urban masses in low income areas.
3. Production of guidelines materials which can be used by the staff as directives for high standards of performance and also as criteria for internal evaluation and monitoring. In this respect three basic reports were produced and disseminated:

The First Report: Cost Analysis Report: The main purpose of this report is to assemble some useful information or data concerning construction costs to assist planners and districts engineer in the management of the implementation of needed improvements in the basic services delivery facilities and/or programs.

The tables and information which are included in this report are derived from the study of 58 construction contracts for building schools, clinics, youth centers, W.C.'s in addition to 30 contracts in the area of public works such as streets paving, street lighting, potable water, sewers and drainage.

The report includes 8 major tables as follows:

- Table 1: Average foundation cost L.E./M².
- Table 2: Superstructure and finishing costs for different facility types.
- Table 3: Composite costs for different types of facilities in different governorate.
- Table 4: Average cost per construction item.
- Table 5: Unit costs: Roads (including street lighting).
- Table 6: Sewers: cost per linear meter of pipe length.
- Table 7: Water project cost per linear meter of pipe length.
- Table 8: List of vehicle/equipment prices.

The report also gives intensive and inclusive illustration with regard to costs analysis in order to plan an implement the basic services improvement programs on the district or local levels. For this purpose the report explains briefly but clearly how this was done in four distinctive sections as follows:

ASSESSMENT OF BSDS TRAINING COURSES

- o Data collection and analysis method.
- o Procedures for utilizing cost estimate.
- o Illustration examples.
- o Updating and inflation rates.

Conclusion

Such a relevant and practical presentations in the report no doubt can serve as a guide for district engineers illustrating to them how to do the job in a simple but accurate way.

The Second Report: Is "The Architectural and Engineering Special Construction Details".

Some errors had been repeatedly observed in a number of construction operations as well as in the finishing works. Therefore, the main purpose of this guide booklet is to assist in the detection of such errors and to demonstrate how to avoid them and to restore them once they occur.

The booklet table of contents includes the following areas in which repairs and good finishing up had been illustrated:

- o Plywood panel door.
- o School blackboard.
- o Protection of staircases.
- o Grease trap.
- o Septic tank.
- o X ray unit (clinic).
- o Lubrication pit.
- o Waterproofing course (roofs).
- o Pavement & sidewalls.
- o Catch basins (storm drains).
- o Wash racks (garage).

The guide included also in addition to the illustrative material a figure for each of the work areas mentioned above.

Conclusion The style of this guide booklet combines both simplicity and clarity to the extent which makes it very useful and practical.

The Third Report: Is called "User's Manual". It is actually a complete and comprehensive presentation of Local Development II Urban Basic Services Delivery System.

By virtue of its extensive contents it is actually a work guide for all those working in the various departments responsible for basic services delivery systems.

In other words the report is and should be considered as a basic directive and implemental aid for all involved in the various BSDS activities.

The contents of this report make it highly instructive and informative beside its documentary value.

ASSESSMENT OF BSDS TRAINING COURSES

In Section 1 The report deals with the BSDS program goals and components which is considered very important orientation.

In Section 2 The report moves to the performance in the following logical sequence.

- a. Needs Assessment
- b. Investment Plan (Planning, Implementation and Funding).
- c. Maintenance Plan (Planning, Implementation and Funding).

In Section 3 In this section the report formulates various criteria and guidelines which can be used as directives in planning, as follow-up/monitoring devices and as internal evaluation indicators and measurements.

In Section 4 The report illustrates precisely all conditions required for USAID funds eligibility.

In Section 5 Presents the role of training in support of BSDS. In this section the basic training courses are listed and distributed according to areas of training (BS., LA., MS., OM., SW., LM.) and course focussed on Engineers/Accountants.

The Appendices also are very important and informative. The first one presents the structure of LD II Governing Committees. The rest are proposed forms to be used including:

1. Form 1. Sub-project description.
2. Form 2. Contract Contents
3. Form 3. Projects Follow-up Format
4. Form 4. Projects completion format
5. Form 5. Funds deposits format
6. Form 6. Bank account format

In addition there is another form proposed for using to present contractor pre-qualifications.

Conclusion There is no doubt that such guide is a very effective guide and aid for most appropriate performance.

C. Follow-up/Internal Evaluation

Follow-up and internal evaluations are a sort of quality control method which is usually carried out to maximize the effectiveness of efforts and to minimize all sorts of waste in the utilization of resources made available for implementation. In BSDS training some methods were used for follow-up and internal evaluation which reveal the keen interest in promoting the effectiveness of training.

1. Field Visits: TAC team carried out field visits in various follow-up and monitoring of the capacity of GOE personnel in performing their functions. TAC Team in cooperation with the BSDS coordinators assess the training needs during these visits of the GOE project staff. During these visits TAC Team also spot check design and construction of sub-projects stressing quality, maintainability of construction and transfer advanced technology. In addition during several field visits TAC Team conducted pre-planning meetings discussing new criteria for both maintenance and investment plans.

ASSESSMENT OF BSDS TRAINING COURSES

2. **Project Rating and Scoring Exercises:** TAC Team applied a very unique method combining follow-up monitoring of sub-project and training on-the-job in the same time. This technique is referred to as "Sub-Project Rating Program". It is a scaling device used to assess quality of design and construction; evaluate level of usage and facility maintenance; and utilize the computer in developing comparisons between districts and between sectors. (Two sub-project rating sheets are attached as samples: one for implementation rating and the second for sub-project operations rating). In using this rating device both TAC Team and GOE personnel at the governorate and districts levels participate in the rating exercises.

Thus, both the process of OJT and follow-up/monitoring of sub-projects implementation and operations are taking place. Criteria for rating are derived from scientific knowledge and training materials illustrated in the trainees manuals and other sources of scientific information related to each area included for rating. This technique also develops within the GOE personnel important scientific behavioral attitudes in their field practices.

Conclusion It is a fact that such technique in capacity building of staff proved to be very effective and should be adopted as one of the most successful on-the-job training techniques.

3. **Trainers Manuals:** In order to keep the training processes within the scope of the training objectives a trainer's manual was produced for each course. The manual is addressed to trainers illustrating the following:
- o Purposes of the course or workshop.
 - o The target group: their jobs; departments, level of operation (governorate, districts); prerequisites for attendance including their educational levels, experience, and group formation (homogeneous or heterogeneous).
 - o Description of the course; its contents; methodology which should be applied; duration of training; references; training aids; training place and equipment and the closing sessions and final internal evaluation with both trainees and trainers feed back.

The trainers manual also includes in its successive parts various guidelines and remarks for trainers to observe and attempt to abide-by.

Appendices also include important guides:

- o Appendix A presents a case study while appendix B includes the various forms in carrying out environmental needs assessment.
- o Appendix C is the trainer's final evaluation of the course or the workshop recorded on a special form, and another evaluation form to be filled out by trainees.

Conclusion The manual is one of the most significant outcomes of the training strategy as applied by TAC training team. It is obvious that there are several technical advantages occurred as result of producing this manual. In the first place the production of the manual is in itself a very particular and conscientious initiative which aims at assuring harmonious training processes in which all participants (trainers and trainees) are sharing the responsibility. The manual indicates that in such way all participants can be considered the trainers, the trainees, the evaluators and the success of failure on the course is jointly their own creation. In addition the manual ensure a high degree of the integrated approach in training whether in relation to the methodology or to the objectives of training. A last comment on the subject is that the production of trainer manual usually happens in specialized training institutions, but very seldom

ASSESSMENT OF BSDS TRAINING COURSES

this was noted in entities which their primary functions are to deliver other services. Hence this is really a notable finding which should be attributed to BS training framework.

4. Trainees Feed Back TAC prepared a trainee final evaluation form to be filled out by samples of trainees upon completion of each course. The purpose of this exercise is to get the trainees feed back as to the effectiveness of training and the recommendations for future training courses.

A sample of 126 trainees filled out this form with regard to BS & LA training courses. The following are the most important trainees opinions:

- a. 80% of the trainees sample believed that the training durations were too short and they recommended that courses durations should be two weeks instead of one week.
- b. 90% of the trainees sample recommended that training should be conducted periodically.

Conclusion This recommendation supports with the fact that training should be a continuous process for upgrading of performance.

- c. 90% of the samples feel the need for more field work training components.
- d. 90% believed that training helped them to improve their performance.
- e. Trainees recommended that supervisors should attend the training courses so they can apply what they have been acquired from their training because sometimes supervisors do not let them do that.

Conclusion This recommendation presents a conflict of conceptual as well as practical disagreements between supervisors and their subordinates. This is due to acquisition of knowledge and skills by the juniors while their seniors do not receive adequate briefing in this regard. Another solution to this problem besides supervisors attending the training courses would be the participation of supervisors in the assessment of training needs of their subordinates.

5. Supervisors Feed Back In the four BSDS training courses which were studied, a sample of trainees supervisors were interviewed and asked to fill out a supervisors final evaluation form. The supervisors main opinions can be summarized in the following way:

- a. Some training courses especially project management and buildings maintenance should be conducted periodically (some suggested every year).
- b. Continuation of training by different methods will reinforce the capabilities of the governorate (districts) personnel.
- c. Notable improvements in work performance and upgrading of work skills among these who received training were observed.
- d. It is recommended to repeat most of the BSDS courses to cover the rest of the target groups individuals.

ASSESSMENT OF BSDS TRAINING COURSES

Conclusion All these recommendations are significant and concur with those expressed by the trainees.

6. Final Courses Evaluation Reports One of the basic structural components of the internal evaluation system of Basic Service and Local Administration (BS & LA) training is the preparation of an evaluation reports for each course very shortly after completion of the course. These training courses evaluation reports are functionally documentary. They serve as references for those responsible for future planning of training courses. They provide a wealth of information including the trainees opinions with regard to:
- a. Effectiveness of training
 - b. Adequacy of training duration
 - c. Significance of training topics
 - d. Accomplishment of training objectives
 - e. Sustainability and replicability

In addition they include valuable analysis of information and data recorded during the training processes. The reports usually conclude with a number of important recommendations and suggestions to be considered when formulating Basic Service and Local Administration (BS & LA) training policies and strategies.

Conclusion The different profiles or styles which these reports take indicate the need for developing a unified frame of reference which would be followed in preparing the reports. This unified profile may take the form of an internal evaluation module with its indicators and criteria needed for measuring or scaling the results. It is suggested that the proposed module would cover the following areas.

1. Assessment of the planning processes of the training courses, workshops and seminars ...etc. and the availability of the prerequisite studies and information.
2. Appraisal of the implementation standard of performance.
3. Measurement of outcomes and effects of training on staff capacity building and work performance by using already produced and accepted criteria of evaluation and by developing new particular indicators relevant to Basic Service and Local Administration (BS & LA) training policies, objectives and strategies.

PART FOUR
MAJOR RESULTS

MAJOR RESULTS

This impact evaluation study revealed numerous findings and results. Among these findings the following are most significant:

1. GENERAL

1. In general both BSDS principal goals and methodology indicate that training and/or capacity building of governorate and districts staff are actually the ultimate goal of BSDS project.
2. This significant LD II component can be seen as an immense training scheme from the first beginning on the basis that staff development and/or capacity building of personnel is the way to assure decentralization and institutionalization processes of basic services delivery at the local levels governorate and districts.
3. Staff development and capacity building in this project is accomplished through actual and scientifically oriented practices on one hand, and through organized core courses on the other hand.

2. TRAINING COURSES

1. Therefore, according to the above mentioned ideology curriculums in most of Basic Services training courses are jobs tasks oriented.
2. Basic Service and Local Administration training core courses focus on three target groups:
 - a. Governorate planning engineering and financial personnel;
 - b. Members of district executive councils including districts chiefs, heads of financial, planning, follow-up and engineering departments;
 - c. Members of local popular councils.

There is no doubt that these three groups are the back bone of the BSDS critical functions (i.e. planning, implementation, management, follow-up and financial BSDS - projects).
3. Analysis of the courses curriculums indicate that they cover adequately the four main areas in staff development:
 - a. Cognitive and updated functional knowledge.
 - b. Skills development.
 - c. Problem solving.
 - d. Work, attitudinal or habitual behavior.
4. Local Administration training courses emphasize the importance of closer working relationships between the executive and popular councils.

MAJOR RESULTS

5. Most of the training courses combine personnel working on all the three levels of the organizational structure (governorate, cities and districts) and thus training enhances team work spirit and the sense of joint responsibility.
6. Some training courses also combine all levels in the line of authority (juniors, second line supervisors, heads of departments and chiefs of executive councils). This considered an effective way of strengthen the cohesion of the working teams and lead to democratic exchange between seniors and their subordinates.
7. Female trainees constituted considerably high percentages in the most important courses. They were 39% in the two courses of construction management for engineering, 43% in the course of budgeting and finance, 27% in the course of quality control of plain and reinforced concrete, and 33% in the course on design and inspection of foundations for light construction. This fact indicated the effective role of the Egyptian women in providing for such highly professional civil services.
8. * A very peculiar phenomenon was noted in the planning of some courses (i.e. electrical and sanitary elements). The course plans spell out in a very defined way the specific abilities which the trainee is expected to have acquired at the end of the course. This is indicative of a high quality of planning for training courses which have well defined objectives. In addition these specified expected abilities can be used as criteria to evaluate the training effectiveness.
9. Homogeneity in the kind and level of education was highly observed in the selection of trainees in most courses. This fact ensure effective and harmonious interaction between courses attendants.
10. Participation of trainees in the training process was not confined to be just the recipients but also providers of training materials through experience sharing seminars and workshops and also through sub-project implementation and operations rating exercises.

3. CONTINUATION OF TRAINING PROCESSES

To assure continuation of training processes TAC training had adopted and used a battery of effective methods and techniques. Among them the following are most significant.

1. Production of a series of trainee manuals one for each course. These manuals can be used in what is usually called self-training as well as scientific references for follow-up and monitoring field operations.
2. On-the-job training activities which are carried out during field visits by TAC Teams. One example of the effectiveness of this training method is the transference of technology which takes place at the GOE wor!: sites and usually on a one-on-one basis during visits of BSDS team.
3. Production of a high quality of guide booklets. Three of these guides were produced and proved to be very helpful and instructive:
 - a. A guide booklet in Cost Analysis.
 - b. A guide booklet in Architectural and Engineering Special Construction Details.

MAJOR RESULTS

- c. A User's Manual which is a detailed and comprehensive presentation of LD II Urban BSDS project.

4. FOLLOW-UP/INTERNAL EVALUATION

Follow-up and internal evaluation of the effectiveness of training is carried out by the following methods:

1. Follow-up field visits by TAC Teams.
2. Production of trainers manuals (one for each course) which are actually frames of reference which trainers should follow and abide by in each course. The contents of these manuals are used also as criteria to evaluate the training processes, methods and contents.
3. Trainees feed back as derived from their answers to the trainees questionnaire which is filled out by trainees at the end of each course.
4. Supervisors feedback which is derived from the responses of the trainees supervisors to the questionnaire which is filled out by supervisors when trainees return to their work after completion of their training.
5. Final courses evaluation reports are prepared and submitted by members of TAC Team.

As a conclusion this follow-up and internal evaluation system proved successful. However, it may need some refinements to be more reliable.

PART FIVE
RECOMMENDATIONS

RECOMMENDATIONS

Based on the results and findings of this study the following recommendations are derived.

1. The local training departments should play more effective role in performing all significant training functions. This is very important goal in order to develop local governorate capabilities to assume these training responsibilities in the future.

In addition institutionalization of all training functions carried out by TAC can only be ensured if these training departments are assisted to be ready to take over efficiently the responsibilities of staff capacity building processes. The governorate training coordinators can play an important role in this matter if an adequate terms of reference are prepared for them to this effect.

2. It is recommended to conduct joint workshops combining both the executive and popular leaders. This joint workshops are very effective in helping each of the two groups in defining its role in relation to the other and to maintain complementarily in their working relationships.
3. It is recommended to maximize the utilization of local training potentials (instructors, training centers or institutions, regional universities and other training entities and facilities).
4. It is recommended that there are some important core courses which should be conducted periodically. This recommendation was also derived from the trainees feedback.
5. The training duration with regard to the core courses is too short specially when more lengthy and compact practical training and skills development are required. 80% of the trainees sample expressed the same opinion. Therefore, it is recommended that the duration of the core courses should be within the range of 10-12 days at least. This of course does not apply to workshops and seminars.
6. It is highly recommended that the following very valuable materials should be widely disseminated:
 - a. The Trainees Manuals.
 - b. The Trainers Manuals.
 - c. The Cost Analysis Report.
 - d. The Architectural and Engineering Details Report.
 - e. BSDS User's Manual.
 - f. The Sub-project Rating Sheets.

It is also recommended that at least the training libraries in the six urban governorate, should be provided with enough copies of these materials.

7. It is also recommended to conduct a series of workshops to study and elaborate on the above mentioned guidelines and manuals. Participants should be all those who are involved in the various activities which these guides and manuals deal with.
8. It is also recommended to design a formative evaluation system which can serve as a sort of quality control method and also can assist in the continuous increasing the effectiveness of BSDS training programs. Such formative evaluation if the recommendation is accepted will require the development of a number of specific indicators and criteria for valid assessment of effects of training on work performance and personnel development.

PART SIX
ATTACHMENTS

1. SUB-PROJECT IMPLEMENTATION RATING SHEET
2. SUB-PROJECT OPERATIONS RATING SHEET
3. TRAINEES' ROSTERS OF THE EIGHT SELECTED AND
BS & UNDER COMPLETION LA TRAINING COURSES.

SUB-PROJECT IMPLEMENTATION RATING (FIELD WORK SHEET)

Governorate: _____ Sub-Project No. _____
 District: _____ Sub-project Title: _____
 Program Year: _____ Type: _____ Inspection: _____

ANALYSIS PROCEDURE	MAX	REPORTED	TOTAL SCORE	REMARKS	
MATCHES NEEDS ASSESSMENT:(Give % of compliance) - For Education, Health and Youth sub-projects, check with Needs Assessment (NA) reports - For garage equipment, check with O&M NA reports - For other sub-projects, use your own judgement but always placing major emphasis on the type and number of beneficiaries.					
	100				
MEETS LD-II CRITERIA: - Serving low income areas - Sub-projects either priority I or II - Income generation - Sub-project type: a. More beneficiaries: Health, Education, Youth and Utilities b. Less beneficial: office ,buildings, gardens ceremony halls - USAID plaque installed	25 15 15 25 20				
	100				
FUNCTIONAL DESIGN QUALITY: 1. Require functional areas provided 2. Adequacy of unit size (5X8m classroom size, or 13 m2 2-bed hospital room, for example) 3. Adequacy of circulation 4. Adequacy of ventilation 5. Accessibility	20 20 20 20 20				
CONSTRUCTIONAL QUALITY - Compliance with specifications (review tender documents) - Quality of materials(with respect to appearance, durability, and maintainability - Workmanship (by observation)	30 35 35				
	100
