ANNUAL BUDGET SUBMISSION, FY 1983

The statistical evidence and other descriptions of the rate and scale of urbanization in developing countries have become commonplace in the development assistance literature and, indeed, in many of the Agency's CDSSs, ABSs, and other programming materials. There is general recognition, if not full understanding, of the strong universal correlation between urbanization and economic development.

Many factors contribute to the process of rapid urbanization, including the oft-repeated "pull" and "push" factors of rural-to-urban migration. Frequently overlooked is the impact of the natural increase in the existing urban population, a dynamic which reportedly has become as or more significant than migration in the urbanization equation. The interplay of these and other factors makes for considerable variation among countries in the rate and extent of urbanization. However, the overall trend is clear. Demographic projections continue to indicate an urban growth rate which is two or more times the national growth rate in most of these countries.

While much of this increased attention is couched in terms of the "problems of rapid urbanization," often ignoring the opportunities which that phenomenon provides, nevertheless, the result has been increasing efforts by governments, private and voluntary organizations, and bilateral and multilateral assistance agencies to address some of the consequences of rapid urbanization.

Against this background and within Agency policies and program priorities, the Office of Urban Development (DS/UD) for the past ten years has been responsible for

- helping the Agency understand and keep abreast of the urban and regional aspects of development,
- providing technical support to field missions and other units in the Agency, and
- engaging in selected research and development (R & D) activities to strengthen Agency and developing country capabilities in addressing the problems and opportunities of rapid urbanization.

These purposes continue to guide the focus and the emphasis in DS/UD's program and provide also the basis of the Annual Budget Submission (ABS) for Fiscal Year 1983.

HISTORICAL BACKGROUND

The Agency's program in urban development is based on two policy determinations, PD-54 of June 1973 and PD-67 of May 1976, which were reconfirmed in November 1979.

Although it has given priority to addressing rural development problems, nevertheless, A.I.D. has sought (1) to enhance the contribution of urban centers to rural, regional, and national development and (2) to help create urban environments in which basic human needs are met more equitably and the poor have an opportunity to improve their quality of life.

A related policy determination is PD-55 (revised) on shelter, which governs the Agency's Housing Guaranty and other housing programs.

These policies are carried out through four major channels:

- * Activities which are initiated by field missions and regional bureaus;
- * Sectoral programs in education, family planning, health, nutrition, water and sewerage, etc.;
- * Housing Guaranty program and other housing-related activities of the Office of Housing; and
- * Research and development activities and field demonstrations of the Office of Urban Development.

In DS/UD's monograph, FOCUS ON URBAN DEVELOPMENT: PERCEPTIONS, PROBLEMS, APPROACHES, AND NEEDS. A Potential Role for U.S. Foreign Assistance (October 1972), three major problems were cited as being central to addressing the consequences of rapid urbanization. They were the problems of perception and leadership, manpower, and information.

The limited mandate and resources which have been provided in A.I.D. have been no match for these problems. Nevertheless, DS/UD has addressed especially the problems of perception and leadership and of information and, to a lesser extent, the problem of trained personnel for urban and regional development. The state-of-the-art studies have been pioneering, generally speaking, and the resulting reports and other documents have enjoyed an excellent reputation and a wide circulation in this country and overseas in academic, development assistance, and professional circles. DS/UD's field demonstrations have addressed local needs, as well as advanced the overall state-of-the-art, and have made possible new approaches to collaboration between field missions and central bureaus. As a result, the intervening years have brought significant, if insufficient, improvements in all three problem areas.

Leaders and resource allocators at all levels are more aware of the unprecedented character of the current urbanization phenomenon. Some are beginning to recognize the dynamic relationships between urban places and surrounding areas, as well as the role of cities in national development. Others are seeking ways to accommodate and improve the current situation and to give direction to future growth and development. However, more traditional ways of thinking - e.g., the sectoral approach - still prevail in some quarters and there continue to be some lack of motivation and only limited resources to deal conscientiously with "things urban."

The number of skilled professional and technical personnel in developing countries has increased. On-the-job, in-service, and other training programs have been mounted during the past decade, sometimes as integral parts of field demonstrations and of other development assistance efforts. Nevertheless, trained personnel in urban and regional planning and development remains in short supply and is a serious constraint in dealing with regional development and the consequences of rapid urbanization.

It is, perhaps, in the area of information that some of the most significant advances have been made. There are more and more accurate measures of urbanization and of its consequences. Population and other data are more available in developing countries, not only because of census and other demographic exercises, but also as a result of special research and development activities (including field demonstrations as well as research studies), some of which DS/UD has sponsored. While additional effort is needed to improve the quality and content of basic information about conditions, processes, and "how to," the remaining critical shortages are in access to existing information, experience, and technological breakthroughs, especially for developing countries, and in institutional capacity in those countries to use effectively what exists already and to produce more information.

DS/UD undertook its first state-of-the-art study in FY 1974. This led to the first field demonstration project in FY 1975. Below in budgetary terms (\$000) is a summary by cluster of DS/UD's programming:

<u>Activity Cluster</u>	<u>Actual Obligations</u>			<u>Planned FY 1981</u>	<u>Proposed FY 1982</u>
	<u>Thru FY 1978</u>	<u>FY 1979</u>	<u>FY 1980</u>		
Regional Development	\$2,175	\$ 939	\$ 219	\$ 418	\$ 700
Employment and Productivity	525	434	628	202	250
Urban Finance and Management	0	10	100	30	200
Urbanization in Nat'l Devel.	0	1,019	459	950	550
TOTAL	\$2,700	\$2,402	\$1,406	\$1,600	\$1,700.

DS/UD'S CURRENT PROGRAM

The program of DS/UD includes the preparation and distribution of publications and other information on a variety of subjects in urban and regional development,

the holding of special workshops and seminars, and maintaining regular contact with other international assistance agencies, professional societies, universities, and private and voluntary organizations in the United States and overseas.

Technical support is provided to field missions, regional bureaus, and other units in the Agency directly, indirectly, and as a byproduct. Technical support is given directly through the provision of information and of advisory and consultative services by DS/UD staff members and contractors. Indirectly technical support results from the location and deployment of individual and institutional expertise. Technical support comes also as a byproduct of field demonstrations of interregional R & D projects.

R & D projects and a number of small research activities complete DS/UD's program.

DS/UD interregional R & D projects usually begin with preliminary state-of-the-art type studies. These studies delineate the problems to be addressed, synthesize the experience in dealing with these problems, identify and assess possible approaches and techniques which might be used, recommend next steps, and outline possible policy and program implications. The results of these studies are used to help design field demonstrations to address local problems and, thereby, to advance the state-of-the-art. Field missions have been encouraged to become involved in these DS/UD-funded efforts to the extent that they wish. In some cases DS/UD projects have been absorbed in field mission programs as a special emphasis.

The state-of-the-art and other studies have been useful also for wider dissemination to host country individuals and institutions and to people in domestic and international agencies and organizations. Three of them have been published by Praeger in its series of Special Studies in International Economics and Development.

Regional Development. Most of DS/UD's activities to date have addressed the interdependencies between urban and rural areas, focussing on urban-rural relationships and on the role of the urban place in rural, area, and regional development. Several factors prompted the initiation of this program emphasis. The spatial aspects of development were not receiving much attention from A.I.D. or from other development assistance organizations. The five-year development plans of many developing countries referred to "regional development" in varying ways and with an apparent lack of clear-cut approaches for doing something about it. At the same time DS/UD's program was just under way in an atmosphere dominated by the Congressional mandate on the "poor majority" and by A.I.D.'s decision to focus its attention primarily on the rural aspects of development.

A state-of-the-art study in 1976 explored the dynamics of urban-rural linkages and relationships and identified some of the roles played by urban centers in support of area, regional, and rural development. It suggested ways in which spatial analysis could be carried out and the results used in the design and implementation of area and rural development projects. Large field application and demonstration projects in Africa, Asia, and Latin America have resulted.

Employment and Productivity is a second cluster of activities. Employment was singled out for attention in the implementation of the Agency's policy concern with helping the poor gain an opportunity to improve their quality of life. Given the magnitude of the subject and its limited resources, DS/UD has focussed primarily on the micro-enterprises and small entrepreneurs in the informal sector, in order to help them improve their productivity and their job-creating and income-producing capacity. Attention has been given also to ways of deliberately enhancing the employment-generating capability of capital development loans. The Housing Guaranty (HG) loans are the immediate concern because of their nature and size. It is felt that increased employment might be a considered and intentional purpose in the design of HG loans.

Urban Finance and Management. The efficient and equitable delivery of essential services to meet basic human needs requires local capacity to provide and manage such services. That is the focus of the efforts in the urban finance and management cluster. As an initial activity, successful local government fiscal and financial management practices and policies are being identified and annotated and a mechanism is being developed to permit and encourage the exchange of experience between and among local governments in developing countries.

Urbanization in National Development. Some of the larger issues related to the role of urbanization in national development are the contents of the fourth cluster of activities. Included are: demonstrating improved ways of delivering services to meet the needs of the urban poor more equitably and efficiently; developing and field testing methodology for determining the nature and policy implications of urban migrant fertility patterns; and identifying areas in which efficiencies are possible in the resource consumption patterns of cities and identifying, adapting, and testing methods and techniques which can help cities increase the efficiency of resource consumption.

Small Research Activities. Given its very limited budgetary and staff resources over the years, DS/UD has had to rely heavily on the Bureau's small research activities fund to initiate probes into promising areas of programming in urban and regional development and to help keep the Agency on the growing edge. Many of these explorations have been pioneering and have broken new ground, adding to the state-of-the-art as well as providing useful program leads for A.I.D.

The reports of several of these studies -- there have been 16 publications in all -- have gone through several A.I.D. editions and have been published also by Praeger. Several more reports are awaiting final editing before they are published.

Currently DS/UD is funding a study of the income dynamics of urban poor households in several barrios of Tegucigalpa, Honduras, by an Honduran private agency; a state-of-the-art study of the role of alternative marketing organizations in moving the products of developing country cooperatives and small-scale and informal sector enterprises in world markets; a documentation and assessment of the social and economic impacts of the activities of the Self-Employed Women's Association of Ahmedabad, India, on its membership and on the community; and a state-of-the-art

study to analyze what makes middle-sized cities in developing countries "tick" -- that is, their characteristics, roles and functions, patterns and dynamics of growth and development, and programs and policies which stimulate their growth.

RELATIONSHIP TO THE CPSS

This program is consistent with DS/UD's Central Program Strategy Statement, FY 1980 - 1985 (CPSS), which was approved in May 1979, and is relevant to developing country needs. The review of the CPSS in last year's (FY 1982's) ABS noted the reaffirmation and clarification of A.I.D.'s urban development policies, some initial efforts at developing regional bureau strategies for urban and regional development, and only a slight improvement in the technical capacity of regional bureaus and of field missions in this field. There has been no change in the status of any of the foregoing, except for some further work on an urban development strategy in Africa Bureau.

The trend, which had begun earlier and was described in the CPSS and in last year's ABS, of increased attention on the part of field missions to the significant role urban centers play in rural, regional, and national development, has continued. Field missions also are taking greater notice of the urban dimensions of development and of the needs of the urban poor. Employment and particularly the role of the small-scale enterprise sector in increasing employment opportunities and productivity have continued to grow in importance in field mission programming. As a result, DS/UD has been called on increasingly to assist field missions in the identification, design, and implementation of strategies, programs, and projects along these lines.

Progress continues to be made in those more pioneering aspects of DS/UD's program, including the improvement of local government resources and management capability, demonstration of better ways of delivering essential services, and understanding and utilizing some of the dynamic linkages between urbanization and other aspects of development -- e.g., migration and fertility and resource conservation.

As has been stated before, the pace and efficiency with which the CPSS strategy can be implemented and the objectives realized effectively are functions of the resources which the Agency and host countries can make available for these purposes.

PROPOSED PROGRAM FOR FY 1983

The proposed program for FY 1983 supports the trends which were just outlined above. It seeks to consolidate the gains made in addressing certain aspects of urban and regional development and to redirect resources into new activities which will continue to respond to Agency and developing country needs and priorities.

DS/UD-funded field demonstrations in the regional development cluster of activities are to be completed and phased out in FY 1981 and FY 1982. They are to be replaced, beginning in FY 1981, with a project which provides the capacity to deliver a range of technical assistance support services to the Agency in urban and regional

planning and development. In FY 1983 field demonstrations will be completed in the employment and productivity and the urban finance and management clusters of activities. The expectation is that further demonstration of the new concepts and approaches, which were introduced by these projects, will not be required. However, field missions will need technical support in order to be able to make use of them appropriately in their programming. In anticipation of that need and of the larger and growing need for technical assistance in developing employment strategies and projects, a new project is proposed in FY 1983. Also, beginning in FY 1983 DS/UD will take over funding responsibility (as caretaker for the planned Small Enterprise and Employment Unit) for the former PDC/OLAB Labor Force Planning Development and Utilization project, management responsibilities for which were transferred in 1981.

The completion and phasing out of some activities make possible new initiatives beginning in FY 1982 and continuing in FY 1983 (e.g., focussing on the development and management of secondary cities), a new activity in FY 1983 (e.g., in employment), and the exploration of other possibilities through small research activities in FY 1983. Given DS/UD's limited budgetary resources, it is this "roll over" in projects which permits DS/UD to maintain a dynamic and responsive program.

The recent budget history of DS/UD (see table above) reveals a sharp decline in available Agency financial resources from FY 1979 to FY 1980 and essentially a straight-lining of the budget subsequently. The indicated budget for FY 1983 shows a reduction at the Minimum level (of 12%) and increases at the Current (of 12%) and Proposed (of 26.5%) levels over the proposed FY 1982 budget. These figures do not include the resources allotted in FY 1983 on a caretaker basis to cover the PDC/OLAB project mentioned above.

The personnel resources also remain in short supply. As a result of legislative requirements, Agency regulations and procedures, and executive prohibitions, DS/UD has had two vacancies in its five-member professional staff and also has not been able to have additional Graduate Work/Study students. A resolution of this situation which is favorable to DS/UD is not certain.

In view of these considerations, DS/UD's program in FY 1983 will include the provision of technical support to field missions and to other Agency units, the continuation and completion of several research and development activities, and the initiation of one or two new ones. There will be continued work on

- the development, strengthening, and use of systems of cities in developing countries;
- the promotion of employment opportunities and enhanced productivity for poor workers;
- the development of urban marketing and markets for the improved distribution and use of food and of other resources;
- the nature and effect of urban population dynamics (migration, fertility differentials, etc.); and
- urban centers as potentially more efficient service organizations and users of energy, land, and of other resources.

There will be new initiatives to

- increase the capacity to deal with the technological and managerial problems of large agglomerations;
- prevent the deterioration of the urban environment;
- increase knowledge and understanding of global patterns of urban growth and urban unrest; and
- understand and exploit the revolution in communications for its potential impact on human settlement planning and development.

The foregoing translates into the following budget allocations by cluster (and in comparison with those for FY 1981 and for FY 1982):

(a) In thousands of dollars (\$000):

<u>Cluster</u>	<u>Planned FY 1981</u>	<u>Proposed FY 1982</u>	<u>Indicated FY 1983</u>		
			<u>Minimum</u>	<u>Current</u>	<u>Proposed</u>
Regional Development	\$ 418	\$ 700	\$ 650	\$ 800	\$ 800
Employment and Productivity	202	250	450	550	550
Urban Finance and Management	30	200	100	150	150
Urbanization in National Dev.	<u>950</u>	<u>550</u>	<u>550</u>	<u>650</u>	<u>900</u>
TOTAL	\$1,600	\$1,700	\$1,750	\$2,150	\$2,400

(b) In percentages (%):

<u>Cluster</u>	<u>Planned FY 1981</u>	<u>Proposed FY 1982</u>	<u>Indicated FY 1983</u>		
			<u>Minimum</u>	<u>Current</u>	<u>Proposed</u>
Regional Development	26	41	37	37	33
Employment and Productivity	13	15	26	26	23
Urban Finance and Management	2	12	6	7	6
Urbanization in National Dev.	<u>59</u>	<u>32</u>	<u>31</u>	<u>30</u>	<u>38</u>
TOTAL	100	100	100	100	100

There are five large and continuing projects and a new project to be funded in FY 1983, plus the inherited labor force project from PDC/OLAB. (These seven projects compare with seven projects in FY 1981 and six projects in FY 1982. Funding is to be completed for two projects in FY 1981 and for one project in FY 1982, while one new project is to begin in FY 1982.) They are as follows:

<u>Projects*</u>	<u>Planned FY 1981</u>	<u>Proposed FY 1982</u>	<u>Indicated FY 1983</u>		
			<u>Minimum</u>	<u>Current</u>	<u>Proposed</u>
912-0007.01 Integrated Improvement Program for the Urban Poor (IIPUP)	\$ 400	\$ 400	\$ 150	\$ 150	\$ 400
931-1110 Urban Financial Management	30	200	100	150	150
931-5402 Energy and Resource Efficient Cities	200	150	400	500	500
936-5405 Central Support for Employment Programming	0	0	200	300	300
938-0600 Labor Force Planning, Development and Utilization	0 ⁺	0 ⁺	250	250	250
936-5411 Support Services for Urban and Regional Development	300	0	300	400	400
936-5414 Economy of Secondary Cities	0	450	350	400	400
931-0058 Land Use Programming	100	0	0	0	0
931-1090 Small Enterprise Approaches to Employment	170	250	0	0	0
931-1228 Rural Demand for Urban Services System	0	250	0	0	0
936-5412 Urban Migrant Fertility	<u>300</u>	<u>0</u>	<u>0</u>	<u>0</u>	<u>0</u>
TOTAL	\$1,500 [#]	\$1,700	\$1,750	\$2,150	\$2,400

* The last four projects have been included in order that the total amounts are comparable for the three fiscal years. Of them, only the Small Enterprise Approaches to Employment project has a continuing life into FY 1984, although no funding in FY 1983.

+ Although nominal management responsibility for this project passed to DS/UD (as caretaker for DS/SEEU) during FY 1981, funding for FY 1981 and FY 1982 was provided through PDC/OLAB. FY 1983 is the first year in which funding responsibility falls to DS/UD.

With \$100,000 in small research activities, the total for FY 1981 is \$1,600,000, as was noted earlier.

At the Minimum level the first two projects would be funded for termination and that, at a very reduced level. Instead of developing more field applications and demonstrations of the Integrated Improvement Program for the Urban Poor (IIPUP) and Urban Financial Management projects, it would be possible to do only the overall evaluations of these projects and to limit the nature and amount of synthesizing the lessons learned and dissemination of the results. Three other projects would continue with reduced funding, thereby limiting the nature and kind of field applications and demonstrations that would be possible. A new project, Central Support for Employment Programming, would be started, and the inherited PDC/OLAB Labor Force project would be funded through to completion.

Funding at the Current level would permit the continuation or completion of all projects as planned, except the IIPUP project, and additional funding for the new employment project. At this funding level, there would not be another IIPUP field demonstration; rather, just a limited wrap-up and termination of it.

Another field demonstration of the IIPUP project, a new employment project, and the planned continuation or completion of the other projects could be realized with funding at the Proposed level.

It is expected that other new initiatives would begin with funding from the Bureau's small research activities fund, in keeping with past Bureau and DS/UD practice.

PROJECT MANAGER: Eric Chetwynd, Jr.

TITLE Program for the Urban Poor (IIPUP)		FUNDS Selected Development Activities	PROPOSED OBLIGATION (In thousands of dollars)		LIFE OF PROJECT	2,530
NUMBER 912-0007.01 GRANT <input checked="" type="checkbox"/> LOAN <input type="checkbox"/>		NEW <input type="checkbox"/> CONTINUING <input checked="" type="checkbox"/>	PRIOR REFERENCE FY 1981 ANNEX V, Centrally Funded, p. 195	FY 83 400	ESTIMATED FINAL OBLIGATION FY 84	ESTIMATED COMPLETION DATE OF PROJECT FY 85

Purpose: To help determine and demonstrate ways in which human services for the urban poor can be made more adequate, equitable, and efficient and with more desirable socio-economic impacts.

Background and Progress to Date: This is a joint program with DS/H. That Office already has underway a number of field activities in conjunction with the HG Program. DS/UD has completed and is publishing for wide distribution a state-of-the-art piece and has initiated field demonstration IIPUP projects in Panama (community employment and income improvement), Costa Rica (community services and transportation) and Ghana (squatter and low-income household settlement guidance and service integration). In collaboration with the LAC Bureau, DS/UD is supporting a Population Council proposal to find ways to help low-income women influence the planners, policy makers and program and project operators who are in a position to improve women's participation in development.

Host Country and Other Donors: Host countries are the central collaborators in DS/UD's IIPUP projects and contribute significantly to field demonstrations. IIPUP projects have not been done in conjunction with other donors but this remains an open possibility.

Beneficiaries: Urban poor recipients of urban services in conjunction with HG or mission programs. Host country institutions to service the urban poor will be developed or strengthened. Personnel in the host countries will be trained in service delivery.

FY 1983 Program: Field demonstration in one country and commencement of wrap-up activities.

PROPOSED OBLIGATION (in thousands of dollars)		
FY 83 150	START OF PROJECT	END
INITIAL OBLIGATION FY 80	ESTIMATED FINAL OBLIGATION FY 84	ESTIMATED COMPLETION DATE OF PROJECT FY 85

Purpose: To improve the financial resource base for the equitable provision of essential services to and access to them by the urban poor.

Background and Progress to Date: Developing country cities, experiencing rapid growth, are hard-pressed to maintain acceptable standards of livability. Demographic pressures produce increasing demands on already inadequate and insufficient essential services and, in turn, create severe stress on fiscal, managerial, and other resources. The situation is compounded by higher service delivery costs, growing difficulties in generating sufficient revenue, and the insufficiency of intergovernmental transfers to satisfy local government needs. Customary budgetary processes and approaches to financing services are no match for expanding local needs. Improved financial management systems and practices are needed to utilize available resources more effectively, to strengthen internal controls, and to make available better economic information on which financial management decisions can be made.

This project is designed to help local officials increase their capacity to evaluate the local revenue base, to adjust financial planning to reflect economic trends, to gauge more accurately the benefits of differing fiscal strategies, and to match more effectively available resources and the longer range needs of their city.

In the first phase of the project successful existing financial management practices at the local government level in developing countries are being identified and reviewed. The assessment of those practices is being done within the broader socio-economic and political operational contexts in which they are utilized. A comparative analysis of urban financial management practices, rather than a set of discrete case studies, is being used, and sites which are broadly representative of intermediate-sized cities are being selected. A mechanism for fostering the better exchange and utilization of such practices and information at the local level between and among countries is also a part of the first phase. The second phase will be devoted to promoting the use of the exchange mechanism and to demonstrating some of the financial management practices.

A state-of-the-art study was completed in FY 1980. This led to the identification and comparative analysis of practices now underway. The second phase is to begin in FY 1982.

Host Country and Other Donors: Host countries are to contribute professional, institutional, and other resources in support of each field demonstration.

Beneficiaries: Local officials, especially fiscal and revenue officers, city administrators and decision-makers, in terms of improved financial management capability. Businessmen and other interested citizens, in terms of the availability of better information. The general public, including the urban poor, in terms of a better resource base for providing essential services.

FY 83 Program: There will be further field application of local financial management practices and expanded use of the exchange mechanism in this final obligation year.

Major Outputs:

ACTIVITY DATA SHEET

PROJECT MANAGER: Eric Chetwynd, Jr.

TITLE Energy and Resource Efficient Cities		FUNDS Selected Development Activities (Energy)	PROPOSED OBLIGATION (In thousands of dollars) FY 83 150		LIFE OF PROJECT 1,400
NUMBER 936-5402	NEW <input type="checkbox"/>	PRIOR REFERENCE None	INITIAL OBLIGATION FY 81	ESTIMATED FINAL OBLIGATION FY 84	ESTIMATED COMPLETION DATE OF PROJECT FY 86
GRANT <input checked="" type="checkbox"/>	LOAN <input type="checkbox"/>	CONTINUING <input checked="" type="checkbox"/>			

Purpose: To improve efficiency in the consumption and use of energy and other key resources in rapidly growing small and intermediate-sized cities.

Background and Progress to Date: The notion of assisting small and intermediate-sized cities in developing countries to achieve greater efficiencies in consumption of scarce resources (i.e., energy, water, agricultural land, food and construction materials) has been of increasing interest to A.I.D. and LDC countries in recent years. Many field missions are identifying energy and resource costs and constraints as a serious developmental problem. Consumption of energy in urban areas in developing countries already is ten times greater than per capita consumption in rural areas.

The project is to assist host countries to achieve greater economy of resource consumption in key sectors of rapidly growing small and intermediate-sized cities and help create and strengthen the skills and institutions needed to continue and expand this work. The heart of the project is the development and implementation of a resource-efficient or resource conserving strategy by the individual small or intermediate-sized city. An exploratory research paper has been completed which contributed to project development. In late FY 1981, a contractor was selected to carry out the project in close collaboration with participating countries which will help with initial state-of-the-art work, including assembly of necessary analytical tools, identification of practical conservation approaches and technologies and formulation of skill and institution-building approaches. These countries also will be the sites for field testing of project concepts and approaches. Examples of some of these approaches are tax laws, zoning restrictions, building codes, energy efficient transport systems, waste and water recycling for industrial or agricultural uses, co-generation of heating and cooling in utilities, public campaigns, etc.

Host Country and Other Donors: Host countries will be involved from the outset in this project and will be expected to make substantive contributions during the field test stage. The work is being coordinated with the UN and IBRD which also are interested in this concept.

MINIMUM (400)	CURRENT (500)	PROPOSED (500)
1) One field test started	1) Two field tests started	1) Two field tests started

Beneficiaries: The project is aimed at reduction of resource consumption in general although the wealthy and middle-income groups would be expected to conserve the greatest share of urban resources since they consume far more resources than the poor. Short term beneficiaries of the project would be the field missions and host country government entities who would be given the technical means and resources to address pressing resource problems. Long term beneficiaries would include a wide spectrum of the population -- studies have shown, for example, that severe energy and resource shortages affect all classes of society, but first and most severely the poor. There will be scope within the project for such targeting of benefits.

FY 1983 Program: The contractor will initiate development of resource efficient strategies in two collaborating host country cities.

Major Outputs:

State-of-the-art study and policy development guide	1
Design of field test	2
Field tests	2
Evaluation report	1
Final report and field guide	1

PROJECT MANAGER: Michael Farberman

TITLE Central Support G. Employment Programming		FUNDS Selected Development Activities	PROPOSED OBLIGATION (In thousands of dollars) FY 83 300		TYPE OF PROJECT 1050
NUMBER 936-5405	NEW <input checked="" type="checkbox"/>	PRIOR REFERENCE FY 1980 CP Annex V, P. 166	INITIAL OBLIGATION FY 83 300	ESTIMATED FINAL OBLIGATION FY 86	ESTIMATED COMPLETION DATE OF PROJECT FY 87
GRANT <input checked="" type="checkbox"/>	LOAN <input type="checkbox"/>	CONTINUING <input type="checkbox"/>			

Purpose: To develop resources, managed centrally, with a capability of providing technical support to A.I.D. central bureaus, field missions, and host country governments for identifying, designing and developing employment-related projects and programs.

Background and Progress to Date: Underemployment and unemployment are problems of which most developing country authorities are increasingly becoming aware, while at the same time the majority of them are recognizing their weakness in employment planning and policy analysis, and are requesting external assistance. Correspondingly, in some cases derivatively, many A.I.D. missions have responded to the Small Enterprise and Employment Unit (DS/SEEU) survey that they wish to direct their thinking toward employment strategies and employment generation projects so as to have maximum positive employment impacts. Inasmuch as this explicit employment concern is a new focus for A.I.D. assistance, central technical support capabilities are not yet well established, and adequate resources have not been identified. This project will develop these Agency capabilities.

Host Country and Other Donors: There already have been exchanges of information with other donors, and collaborative approaches in programming are likely. Various degrees of participation by host country institutions and organizations are expected, particularly with respect to the building of employment planning, promotion and policy analysis capabilities.

Beneficiaries: Developing country men and women for whom new productive employment opportunities and the associated income will have been generated.

FY 83 Program: As FY 83 will be the first year of project implementation, resources obligated will cover to a large extent front-end organizational costs, including substantial canvassing and familiarizing by the contractor inside AID/W with current bureau and mission needs. Through the agency of the SEEU and the Employment Steering Group, interviews, small workshops, and writing and distribution of working papers on technical assistance approaches and state-of-the-art will be used to effect this exchange of information. Before the end of this first year, a few short- and long-term technical assistance activities will have begun. Also, the central staff of the contracting organization will organize a monitoring and evaluation capability for the purpose of tracking both operationally and technically the experiences of the technical assistance teams, so that lessons may be learned and advances in the state-of-the-art in employment project/program assistance may be assessed, consolidated and disseminated.

Major Outputs:

State-of-the-art studies and working papers	4
Missions provided technical assistance	20
Workshops	8
Resources roster	1

PROJECT MANAGER: William R. Miner

TITLE Support Services for Urban and Regional Development		FUNDS Selected Development Activities	PROPOSED OBLIGATION (In thousands of dollars) FY 83 400		LIFE OF PROJECT 1,300
NUMBER 936-5411 GRANT <input checked="" type="checkbox"/> LOAN <input type="checkbox"/>	NEW <input checked="" type="checkbox"/> CONTINUING <input type="checkbox"/>	PRIOR REFERENCE FY 1982 Annex V, Centrally Funded Programs, Pp. 99 and 105	INITIAL OBLIGATION FY 81	ESTIMATED FINAL OBLIGATION FY 86	ESTIMATED COMPLETION DATE OF PROJECT FY 86

Purpose: To provide a central support service to meet the demand for assistance in identifying, designing, implementing, and evaluating projects in urban and in regional development.

Background and Progress to Date: Host country development plans and field mission strategies are giving increasing attention to the spatial and regional aspects of development and to the interdependence between rural and urban areas in the development process. There is growing recognition of the economic, social, and developmental relationships between and among various sections and segments of a developing country. Because they lack professionals in this field, the regional bureaus, field missions, and host governments have relied on the Agency's small central staff in urban and regional development to assist them in understanding and exploiting these linkages and relationships in their country programming.

The central staff has undertaken state-of-the-art studies in urban and regional development, developed guidelines for urban and regional analysis, sponsored field demonstrations in a number of countries, and has assisted with the identification, design, and implementation of LDC projects. Most of these support services have been byproducts of field demonstrations. As these field demonstrations are concluding, the support services which were incidental to the field demonstrations are much more in demand. These services include assistance with developing area or regional strategies, conducting analyses, designing and implementing and evaluating programs and projects, and assisting with the recruitment of technical expertise and with the provision of training programs.

This project has established such a central service delivery capacity to be responsive to these programming requirements. An institutional arrangement was concluded in FY 1981 and a contract was let to it to implement the project. The new resource became operational in FY 1982.

Host Country and Other Donors: None.

Beneficiaries: Regional bureaus and field missions will be able to identify and develop components of their programs. Host country government officials and technicians will acquire the planning and analytical capacity in urban and regional development. The people in host countries will benefit from the programs and projects which result.

FY 1983 Program: This will be the second year of funding. There will be a doubling of short-term consultancies to provide for the expected increased demand for technical advisory services over that in FY 1981-FY 1982. Slight increases

are provided in the level of training and of research and development activities.

Major Outputs:

Strategies developed	20
Analyses completed	10
Projects identified/designed	12
Programs developed/evaluated	20
Training opportunities planned	12

TITLE The Economy of Secondary Cities		FUNDS Selected development activities	PROPOSED OBLIGATION (in thousands of dollars) 2,450	EST. OF PROJECT 2,450
NUMBER 936-5414	NEW <input checked="" type="checkbox"/>	PRIOR REFERENCE None	INITIAL OBLIGATION FY 82	ESTIMATED FINAL OBLIGATION FY 86
GRANT <input checked="" type="checkbox"/>	LOAN <input type="checkbox"/>			ESTIMATED COMPLETION DATE OF PROJECT FY 87

Purpose: To help stimulate growth and development of secondary (intermediate-sized) cities in support of national development strategies.

Background: Developing countries have been turning increasingly in recent years to decentralization of urban growth as a major developmental strategy. Often this strategy is adopted to slow the rapid growth of major cities. It also is seen as a means of spreading the benefits of development away from central regions, stimulating development of backward or lagging regions, or integrating remote regions of the country into the national economy and polity. Sometimes a combination of these motives is involved.

Whatever the motive, the problems always remain the same. Which cities should be selected for priority attention and how can their growth be stimulated? Unfortunately relatively little is known about the economy of medium-sized cities and what makes them function. A few of the basic axioms of location economics explain why some cities rise and why they fall when the key is an important natural resource or a major industry. However, in general, where obvious stimulants and deterrents to growth are not present, the chemistry of growth or of decline in intermediate-sized cities still is a very inexact science. Moreover, most of the theories put to test in the past several decades have been discredited or have been disappointing; among them, growth poles, industrial centers, and new towns.

This project will examine past experience, the economic structure of secondary cities, and the effects of national policies, political commitment and cultural inhibitions in an attempt to determine how to stimulate and sustain secondary city growth and development. The project is different from yet related to DS/UD's completed project, Land Use Programming for Intermediate Sized Cities. This latter project was designed to help control and guide the physical growth of intermediate-sized cities which already had entered the stage of rapid growth. Thus, the experience gained in the Land Use Programming project will be a valuable input to this proposed new activity.

A small research study will be completed in FY 1981 which explores the problems outlined above. This will be used as a key resource in preparation of the project paper. Principal activities will commence in FY 1982. During FY 1982 a contractor will be secured to (1) perform an analysis of experience to date with secondary city economic development, (2) identify critical problem areas and knowledge gaps, (3) formulate an international program of research and development, and (4) outline a system of field analysis and design workshops to assist participating countries and field missions in development of strategies and programs for secondary city economic development. The contractor will be expected

also to be responsible for subsequent information sharing, technical assistance and institution building in the field.

Host Country and Other Donors: Other donor involvement probably will not go beyond the usual sharing of information. For example, the small research study in FY 1981 is examining IBRD and other international Agency interests and programs in this area. As the project moves into the field application phase, substantial contributions will be expected from participating host countries.

Beneficiaries: (1) Residents of lagging or remote regions of the host countries; (2) unemployed and underemployed people in and around the targeted secondary cities; and (3) the planners and decision-makers who will have better tools with which to design and implement national development strategies.

FY 1983 Program: During FY 1983, the contractor will intensify work with field missions and host countries on analysis, planning and strategy development. Consolidation, synthesis and sharing of research results also will begin during FY 1983 and institutional development and training approaches will be explored.

			ESTIMATED COMPLETION DATE OF PROJECT FY 85		

Purpose: To promote, support and facilitate employment-related activities within AID by enhancing ability of missions and bureaus to develop and implement employment-related projects, and by meeting their specific requests for technical assistance.

Background and Progress to Date: This project was transferred in mid-FY 81 to DS/UD as caretaker (pending the formal creation of the Small Enterprise and Employment Unit) from the former Office of Labor Affairs (OLAB) in the PDC Bureau. As initially designed for PDC/OLAB's purposes, the project was to provide four distinct types of products in support of AID employment project programming: (1) technical support to AID bureaus and missions for developing and implementing labor/employment projects; (2) identification/evaluation of professional/technical resources available elsewhere in government and the private sector for designing and implementing labor/employment projects; (3) information on current labor/employment development assistance activities; and (4) evaluative services. Much of this assistance was envisaged as being provided through a RSSA with the US Department of Labor (DOL) toward which end one DOL person is already at work full-time, with a second person being recruited. In addition the project has supported and/or will support the procurement of private sector technical services through IQC contractors, purchase orders and competitive RFPs. Thus far the project has been focussing its efforts on the labor supply aspects of employment, but is expected to broaden the scope of its activities during CY 1981 and 1982, including supporting the upgrading and translation of Bureau of Labor Statistics training manuals for developing country trainees in labor market and employment analysis and planning, and to respond to mission-requested support for employment project design, implementation, evaluation and strategy activities.

Host Country and Other Donors: There has been technical collaboration, though no financial co-operation, on project activities with the ILO. Frequent contacts are anticipated with other multi-laterals and bi-laterals with project interests in the employment area, as well as with counterpart individuals and institutions in host countries.

Beneficiaries: Developing country men and women, worldwide, for whom employment opportunities, training, greater productivity, and therefore higher incomes and enhanced well-being will be provided.

FY 83 Program: Emphasis will be on providing to field missions and bureaus assistance in areas of project identification, design, implementation and evaluation, and in assisting them to locate appropriate external resources for these purposes. Assistance to field missions in the preparation of employment strategies will continue to be provided.

Major Outputs:

Missions provided project-related technical assistance	12
Employment strategies	6
Employment/labor force studies and reports	6
Training manuals (set)	1
	<u>FY 83</u>
A.I.D. Financed Inputs:	
Professional services through DOL RSSA (including overhead)	120
Other professional services	80
Travel	30
Evaluation	5
Other costs	<u>15</u>
TOTAL	250
