INVENTORY OF A.I.D. MICRO-DATA COLLECTION ACTIVITIES
FOR DEVELOPING COUNTRIES

INTRODUCTION

Background: For many years program and project officers and researchers have been carrying out studies and small-scale surveys in developing countries that include the collection and analysis of statistical data. Although the data included in these special studies are valuable for a multitude of current and future uses, the data are frequently unavailable or lost to succeeding analysts. The uses to which the data from these studies could be put are numerous, but they are especially important as sources of information on socioeconomic conditions and trends in developing countries and as models for other studies with similar objectives. These are the kinds of data that are crucial for local policymakers and development cadres to be able to access if they are to plan and carry out their programs and projects efficiently and effectively.

Since its inception, the Agency for International Development has been a major generator of micro-data studies. Micro-data as used here is understood to mean information collected through surveys, case studies or censuses, where the unit of observation is the individual farmer, household head, fertile female, migrant, or some other person or organization, such as enterprise or farm. The purpose of the data collection activity could have been project design, monitoring, evaluation and/or sector assessment. The full extent of AID's work in this area is difficult to know, but it is estimated that several hundred such studies have been undertaken. For example, through the Surveys and Evaluations Unit of the Bureau of the Census alone in the last 3 years USAID has funded over 5 million dollars in local level and project studies, many of which included micro-data collection. Currently studies collecting these data, if available at all, can be located only after arduous, expensive and time-consuming individual searches. It has been frequently asserted that if information on all the studies carried out by the Agency that contain micro-data collection were systematically and centrally available to AID personnel and the developing countries, substantial savings could be realized in time, effort and money.

Through the Development Information Utilization Service in the Bureau for Science and Technology (S&T/DIU), an organizational framework exists which would make it possible for information on AID projects which include a micro-data component to be collected in one centralized location and to be disseminated to AID and host country personnel on a routine basis. This is consistent with DIU's role of serving as the guardian of AID's development information memory and providing information awareness services to Agency personnel and to Agency counterpart personnel and institutions in developing countries.

However, at the present time the Development Information System (DIS), developed by DIU to record abstracts of project documents submitted to DIU, generally lacks specific information about data collection activities. For example, entries in the DIS can be searched by the type of data collection, such as "survey" (e.g., a household survey), but in the printout of the abstract there is no systematic display of specific variables for which data were collected in the survey, nor any clear indication of where one may find the questionnaire utilized in the data collection. Perhaps more importantly, there is little, if any, information on principal contacts who are knowledgeable about the data collection activity. Although the system of abstracting from Agency documents can be modified to be responsive to users' needs regarding information on data collection activities, it will require some time and cost to incorporate this capability. Meanwhile, we believe there is much to be gained from reviewing recent Agency projects to identify those with data collection components and to making information on these studies centrally available.

The Present Effort: As a first step toward making information on Agency-financed micro-data sets available, the Economic and Social Data Services Division in DIU (S&T/DIU/ESDS), which serves as the AID focal point for data collection efforts, contracted with Abt Associates Inc., Cambridge, Massachusetts,* to carry out an inventory of AID-sponsored micro-data sets. The emphasis of the inquiry was social, demographic and economic data sets relevant to development planning. Major subject areas were agriculture, housing, demography, health and nutrition, economics, education and energy and natural resources.

*IQC Contract No. AID/SOD/PDC-C-0389.

The scope of the inventory of micro-data collection activities prepared by the contractor included projects that were funded wholly, or in part, by AID including loans, grants and major technical assistance contracts conducted since 1974. While most of these projects are already completed, those still in the design and implementation stage have been included. Although the scope of the listing extends backwards to 1974, greater emphasis was placed on most recent years.

Data collection projects were conducted by a diverse group of researchers from AID, other United States Government departments and private firms. AID is most often the primary sponsor and implementor. In some cases funding is bilateral, with assistance from AID going to or through recipient countries, ministries, and private and voluntary organizations such as the Food and Agriculture Organization and the United Nations Fund for Population Activities.

The data collection instrument utilized to gather information concerning AID-sponsored data collection activities was a questionnaire. It was developed by the contractor in consultation with AID/W. The principal concerns in the design of the questionnaire were to collect all information important to the needs of the users of the system, while simultaneously keeping the form brief and minimally burdensome to the respondent.

To identify both projects involving data collection activities, as well as appropriate respondents to complete the questionnaires, the contractor utilized a three-pronged approach: (1) a direct personal contact approach with personnel in AID Bureaus and Offices, (2) a search of computer printouts of document abstracts from the present DIS system, followed up by a mailing of questionnaires to project managers or project officers identified through the automated query, and (3) sending a memo from S&T/DIU to all Bureau Heads requesting project lists. The lists received in response to this memo were the most useful in the identification of respondents as they contained titles of data collection activities, project numbers and names of people familiar with the actual data collection. Personal interviews with those identified using this approach netted the largest number of responses.

During the project 470 data collection activities were identified, including separate counts for multi-country survey efforts, such as the World Fertility Survey.* Of these 470 identified activities, a total of 204 questionnaire responses were judged usable and were entered into the computerized data base that was utilized to produce the present "Inventory of A.I.D. Micro-Data Sets for Developing Countries."

*The contractor reported that, based on information obtained during the course of the contract, a conservative estimate of the total AID-assisted data collection activities between 1974 and 1981 was in excess of 1000.

Aggregate statistics concerning the 204 data sets included in this Inventory, while not suitable for making statistical inferences about the "true" universe of all AID funded data collection activities, are nonetheless interesting. The contractor provided the following summary findings:

All questionnaires used for our data entry contain at least one title (project title or title of data collection). A great majority of them have the AID project number provided too. About one-eighth of the questionnaires pertain to multi-country data collection activities; three-fifths are nation-wide studies, and one-sixth are provincial or regional activities. A little over half of the activities have been completed, and the rest are still in the implementation stage. Seventy percent of the questionnaires with known years of completion of the data collection indicate that they are/were between 1978 and 1981, with a plurality being in 1980.

As regards the purposes of the data collection activities, over half are for sector assessment, one-third for project evaluation, and one-seventh for miscellaneous purposes like technical support. Less than 10 percent of the returned questionnaires indicated that the data collections are primarily for project design, and that almost none are for monitoring on-going projects. As far as the methods of data collection are concerned, about three quarters of the questionnaires are sample surveys. Other methods commonly used are institutional records (20 percent) and case studies (16 percent). Over half of the data collection activities are multi-round (including periodic surveys). Individuals and households are the most frequently mentioned physical units of observation, each with 50 percent to 60 percent of all cases.* Farms/farm enterprises, communities/neighborhoods and other special units are also common (10 percent to 20 percent). Sample sizes of data collection activities are distributed roughly as follows: one-third below 1,000, one-third between 1000 and 5000, and one-third above 5000. Large samples are probably over-represented in the present inquiry. Nevertheless, small (less than 200) samples are shown to comprise at least one-fifth of all the cases.

*Total over 100 percent because more than one type of unit of observation can be indicated.

Over 70 percent of the micro-data referred to in the questionnaires are available in some form of machine-readable medium (magnetic tapes or punched cards). About two-thirds had "hard copies" available. Less than 10 percent of the questionnaires indicated either an inaccessible or an unknown status of data availability. Very few questionnaires contain comments on the quality and usability of data. When comments are provided, however, the descriptions are detailed.

In terms of frequencies of subject matters being mentioned in the returned questionnaires, demographic and economic variables are most often cited. The specific variables most often cited within subject areas are listed below:*

- o Demographic items: age, marital status, fertility, and household composition.
- o Economic variables: employment, occupation, and income.
- o Health and nutrition: lactation, nutrition status, child health, and morbidity
- o Agriculture: crop area, livestock, and various factors of production
- o Housing: construction materials and household size and water supply.
- o Energy and natural resources: consumption, demand, cost, and supply.
- o Education: attainment of formal education, literacy, non-formal education and training.

Respondents have entered many other variables that cannot be adequately described by categories printed on the questionnaire.

Finally, every questionnaire contains at least one name and address of a contact person/organization so that a future inquirer can be referred to them for further information. In most instances, telephone numbers are written on the questionnaire as well. From various references and personal interviews, the present effort has obtained two contact sources for 73 percent of all the computerized questionnaires.

*Variables within a subject are ordered by frequency.

Future Work Concerning Information on Data Collection Activities in AID: In addition to providing a valuable core set of information on AID micro-data collection activities, this project provided practical estimates of the resources needed to build a full inventory of AID-sponsored data collection activities if we should choose to do so. However, at this time ESDS is planning to use the project experience primarily as a base from which to derive guidelines for developing procedures for collecting, computerizing, disseminating and utilizing information about AID sponsored micro-data sets in future AID work.

It is anticipated that in the future we will be modifying the Development Information System (DIS) to provide for abstracting information on data collection activities from AID project documents on a routine basis. This information will then be available as an integral part of AID's development information memory.

Request For User Response: The present inventory was developed to provide information useful to local policymakers and planners in developing countries, the staff of USAID and other AID-affiliated agencies, organizations and researchers. For the information to be maximally useful, it is important that there be a continuing process of evaluation, expansion and revision. Therefore, S&T/DIU/ESDS requests that users of this volume and these data provide us with their responses and suggestions for improvement in the information included. Several tear-out copies of USER COMMENT forms have been bound into this volume (blue pages) for use in submitting such suggestions to the DIU Office in AID/Washington. In order to ensure that the strong points of this inventory are retained in future issues, such "feedback" should identify those features of the present volume that are considered especially useful as well as suggestions for future modifications.

One comment that can be readily anticipated concerns the need to expand the coverage of this report -- the present volume contains reports for perhaps as few as 20 percent of all data collection activities. Plans are currently being made for periodically updating in this volume, both to include new AID-funded data collections efforts, as well as to complete the coverage of previously existing efforts. These efforts should lead to major improvements in coverage of historical data and complete or nearly complete coverage of ongoing or newly begun data collection activities.

We look forward to your comments and suggestions.

Baseline Report

TITLE(S):

A Baseline for Rural Development in Central Tunisia

BASIC INFORMATION ABOUT DATA COLLECTION ACTIVITY:

PRIMARY PURPOSE = Project Design
STATUS = Completed
SAMPLE SIZE = Below 200 Observations
METHOD = 1. Sample Survey
SURVEYED UNIT(S) = 1. Community/Neighborhood

LIST OF SUBJECT CATEGORIES INCLUDED:

HOUSING - CONSTRUCTION MATERIALS
ECONOMIC - WEALTH OWNERSHIP
AGRICULTURE - AGRICULTURAL YIELD

COVERAGE = Provincial (including state and region)
FIELD WORK COMPLETED IN YEAR = 1980
NUMBER OF ROUND(S) = Single Round
FORM OF DATA ACCESS = 1. Non-Machine Readable Medium

HOUSING - WATER SUPPLY AND SANITARY FACILITIES
ENERGY AND NATURAL RESOURCES - COST/PRICE ASPECTS
AGRICULTURE - AGR. PRICE, COST, INCOME, FARM CREDIT

INVENTORY OF A.I.D. MICRO-DATA SETS FOR DEVELOPING COUNTRIES
(Produced by AID/S&T/DIU/ESDS as of 05/14/82)

YEAR OF SURVEY COMPLETION: 1981

COUNTRY: TUNISIA

TITLE OF DATA COLLECTION:

Vehicle Inspection/Postcard Pilot Survey

COUNTRY-NAME: Tunisia

PROJECT TITLE UNDER WHICH DATA COLLECTION WAS CARRIED OUT:

Tunisia Energy Assessment

DATA COLLECTION DOCUMENTS AVAILABLE:

TYPE(S):

Questionnaires;Survey Designs;Field Manuals;Guides;
 Code Books

TITLE(S):

Basic Documentation

BASIC INFORMATION ABOUT DATA COLLECTION ACTIVITY:

PRIMARY PURPOSE = Sector Assessment
 STATUS = Implementation Stage
 SAMPLE SIZE = Over 5000 Observations
 METHOD = 1.Sample Survey

COVERAGE = Multi-Country

FIELD WORK COMPLETED IN YEAR = 1983

NUMBER OF ROUND(S) = Single Round

FORM OF DATA ACCESS = 1.Non-Machine Readable Medium
 2.Machine Readable Medium

SURVEYED UNIT(S) = 1.Individual
 2.Household/Family
 3.Farm/Farm Enterprise
 4.Community/Neighborhood

LIST OF SUBJECT CATEGORIES INCLUDED:

DEMOGRAPHIC - DATE OF BIRTH
 DEMOGRAPHIC - MARITAL STATUS
 DEMOGRAPHIC - FAMILY PLANNING KAP
 DEMOGRAPHIC - RACE
 DEMOGRAPHIC - MIGRATION
 HOUSING - HOUSEHOLD SIZE
 HOUSING - ELECTRICAL ACCESS
 HEALTH AND NUTRITION - HEALTH SERVICE ADMINISTRATION
 ECONOMIC - EMPLOYMENT AND LABOR FORCE
 EDUCATION - EDUCATION ATTAINMENT-FORMAL
 AGRICULTURE - FERTILIZER, PESTICIDES, IRRIGATION
 AGRICULTURE - MARKETING, CONSUMPTION

DEMOGRAPHIC - FERTILITY
 DEMOGRAPHIC - RELATIONSHIP TO HOUSEHOLD HEAD
 DEMOGRAPHIC - MORTALITY
 DEMOGRAPHIC - RELIGION
 DEMOGRAPHIC - HOUSEHOLD COMPOSITION
 HOUSING - TENURE AND RENT
 HEALTH AND NUTRITION - MORBIDITY
 HEALTH AND NUTRITION - LACTATION, POSTPARTUM MENORRHEA
 ECONOMIC - OCCUPATION/INDUSTRY OF RESPONDENTS
 ENERGY AND NATURAL RESOURCES - CONSUMPTION/DEMAND ASPECTS
 AGRICULTURE - OTHER AGR. PRODUCTION FACTORS

COUNTRY: LIMITED WORLDWIDE
 INVENTORY OF A.I.D. MICRO-DATA SETS FOR DEVELOPING COUNTRIES
 (Produced by AID/SET/DIU/ESDS as of 05/14/82)

YEAR OF SURVEY COMPLETION: 1983

TITLE OF DATA COLLECTION:

Maternity Care Monitoring

COUNTRY-NAMES: 50 countries (both developing and developed)

PROJECT TITLE UNDER WHICH DATA COLLECTION WAS CARRIED OUT:

International Fertility Research Program

USER COMMENTS

If subsequent efforts in preparing the Inventory of A.I.D. Micro Data Sets for Developing Countries are to be improved in a manner maximally responsive to user needs, the major ideas for such improvements must come from the people who actually use the Inventory to help meet policy, program and project needs for such information. This tear-out form is placed here in multiple copies to make it easy for successive users to submit constructive comments.

It would be helpful if the reader would clearly identify on this form the features of the Inventory considered particularly effective in contributing to its usefulness. Such supportive "feedback" is necessary to ensure that the strong points of this report will be retained in the future.

It is suggested that the Introduction be read once more before this form is completed, in order that the reader may have a clear idea of just what the Inventory is meant to be, as well as what it is not meant to be.

AID field officers should air pouch the completed form to the address on the left, and others mail it to the address on the right:
