Improving the Efficiency of Educational Systems (IEES) is an initiative funded in 1984 by the Agency for International Development (AID), Bureau for Science and Technology, Office of Education. The principal goals of the IEES Project are to help developing countries improve the performance of their educational systems and strengthen their capabilities for educational planning, management, and research. To achieve these goals, a consortium of U.S. institutions has been formed to work collaboratively with selected host governments and USAID Missions for ten years. The Consortium consists of The Florida State University (prime contractor), Howard University, the Institute for International Research, and the State University of New York at Albany.

There are seven countries working with the IEES initiative to improve educational efficiency: Botswana, Haiti, Indonesia, Liberia, Nepal, Somalia, and Yemen Arab Republic.

Documents published by IEES are produced to promote improved educational practice, planning, and research within these countries. All publications generated by project activities are held in the IEES Educational Efficiency Clearinghouse at The Florida State University. Requests for project documents should be addressed to:

*These materials were prepared for an IEES training workshop for educators from the Yemen Arab Republic (YAR) in January 1989. They consist of three volumes:*

**Volume 1: DOS/SPSS-PC+/ENABLE/LOTUS 1•2•3  
Introduction to Statistics**

**Volume 2: Manpower Education Model**

**Volume 3: Manpower Education Model (Exercises, Reference, Summary)**

*An English/Arabic glossary of Labor Force and Manpower terms is provided in Volume 1.*

## **Project Team**

**Institute for International Research**

Jerry Strudwick  
Mohammed Allak

**State University of New York at Albany**

Anthony Cresswell  
Michael Green

## **Other Team Members**

*Manual Editing and Design:*

**State University of New York at Albany**

Alan Taylor

**The Florida State University**

Jerry Messec

*Workshop Administration:*

**State University of New York at Albany**

Natalie Waschull  
Kelly Van Aller

*English as a Second Language Consultants:*

**State University of New York at Albany**

Helen Bakker  
Lisa A. Wolpert

*Gratitude is expressed to the World Bank, who made their Manpower and Education Model available for training purposes during this workshop.*

## BASIC INFORMATION

### Components of a Typical Computer System

A typical computer system consists of these six components:

1. the central processing unit (CPU)
2. the memory (RAM and ROM)
3. one or more disk drives (internal and/or external)
4. a keyboard
5. a monitor
6. a printer

#### *The Central Processing Unit (CPU)*

The CPU is the part of the computer which directs the computers operations. It performs all the analytical and computational functions that occur inside the computer system. The CPU operates by performing a list of instructions (programs) which are controlled by the **disk operating system** (DOS). The disk operating system is discussed in a separate section of this manual.

#### *The Memory*

The memory stores information that will be processed by the CPU. The memory is made up of bytes. A byte is a single character of information. (Each letter or number is a character.) For example, a computer with 256,000 bytes of memory can store in its memory 256,000 characters. A common computer memory capacity is 640KB. KB (sometimes just K) stands for kilobytes. There are 1024 bytes to a kilobyte.

There are two types of memory:

- 1) Random Access Memory (RAM) - The computer has mostly this type of memory, and it can be used to store and retrieve any type of information.
- 2) Read Only Memory (ROM) - The contents of this memory are not readily changed. ROM stores the information that the computer needs when it is first switched on.

## *The Disk Drives*

The disk drives are used to "read" and "write" information to and from a diskette. (The disk stores information on its surface.) Whenever a drive is in use, a light will be on. It is important that you do not move the computer or (if it is a floppy drive) open the drive door when the light is on, as damage or loss of information may result. All disk drives have two important elements:

- 1) A read-write head - This is used to read information that is on a disk and to write information onto the disk. (The read-write head performs a similar function as the recording heads in a tape recorder.)
- 2) A means of spinning the disk - The read-write head can only read from or write to a small part of the disk's surface at one time. Therefore, the disk must turn in order to allow the head access to its entire surface.

Computers may have two types of disk drives:

- 1) **Floppy disk drives** - Usually known as the A or B drive on a computer. The floppy disk drive gets its name from the type of disk (the floppy disk) that is inserted into the drive. Each floppy disk typically can hold 256KB of memory. Closing the door of a floppy drive also informs the computer that a disk has been inserted. It also prepares the disk turntable to spin the disk across the read-write head, thus allowing access to the information on the disk.

**NOTE:** Always take care when handling floppy disks, and when you insert them into the computer do so gently. Damaged disks are unreadable.

- 2) **Hard disk drives** - These are usually known as the C drive, and are also called "fixed" drives. They support the computer's resident "hard disk." The hard disk is capable of storing a large amount of information, for example, a common hard drive would might have a memory capacity of 20MB (MB is short for megabytes. There are one million bytes in a megabyte.). Hard drives are often preferred as they permit the user to store both their software programs and files inside the computer. They are also faster to work with than floppy disks and don't damage as easily. The read-write heads on a hard drive are permanently positioned very close to the

surface of the hard disk. Therefore, moving the computer must be done with care, as it is possible that any sudden movement may cause the hard disk drive to scratch against the magnetic surface of the disk, and this will result in a loss of information and quite possibly permanent damage to the disk.

**NOTE:** There is a program in DOS which you can use to lock the read-write heads in place for greater safety in moving.

### *The Keyboard*

The keyboard allows the user to communicate with the computer. There are over 80 keys, some of which serve specialized functions, and on many keyboards most keys can represent both Arabic and English characters. The keys include:

- Letters - a,b,c, etc.
- Numbers - 1,2,3, etc.
- Functions Keys - F1, F2, F3, etc. These keys serve a different purpose for each type of software used.
- Arrows to move the cursor around the screen.
- Caps Lock and Num Lock
- Insert and Delete
- Alt and Ctrl (control)

**NOTE:** As you progress, the particular uses of the keys which are unfamiliar or not self-explanatory will be made clear to you as you need them.

### *The Monitor*

The monitor is the screen that displays information following instructions that the user keys into the CPU using the keyboard. The monitors are either monochrome (one color only) or color ("full color," usually 16 or 32 colors.) Color monitors are an aid to graphics use and some word processing programs.

## *The Printer*

The printer provides a paper copy of your file, or just a few parts of it. The paper copy is often referred to as a "hard copy." A special cable connects the printer to the CPU.

**NOTE:** Printers can be permanently adjusted to print in both Arabic and English.

## **Using the System**

### *Turning on the System*

Most computer systems which have hard disk drives have DOS loaded onto the default drive, which is the C drive. When you turn on the computer, the following will appear on the screen:

**Current date is day nn/nn/nnnn  
Enter new date (dd-mm-yy):**

You will type either **[Return]** (or **< >**), or correct the date as necessary using the format shown on the screen, then press **< >**.

For example, you would type: **(08-11-88) < >** if today is November 8, 1988.

You will then see on the screen:

**Current time is nn:nn:nn,nn  
Enter new time:**

Now you will type either **[Return]** (or **< >**), or correct the time as necessary using the format shown on the screen, then press **< >**.

For example, you would type: **09:15:00,00 < >** if the time is 9:15 in the morning.

You will then see:

**IBM Personal Computer DOS version 3.30**  
**Mode prepare codepage function competed**  
**Arabic Support Version 4.0**  
(c) Copyright IBM Corp. 1984, 1987  
**ARABIC SUPPORT SPECIFIED AND LOADED**  
**C:\>**

*Locating files on disks*

The floppy disk drives are typically A and B. Drive A is the floppy disk drive that is an internal part of the CPU. Drive B may be an internal floppy disk drive or one which is external. Drive C is a hard disk drive that is resident in the computer.

The computer will recognize these drives as:

**A:            B:            and            C:**

The colon (:) is always used after the drive letter, as it is used to separate the drive name from the file name.

*The system prompt*

The prompt contains the default (automatically selected) drive and a symbol:

**A:>            B:>            or            C:>**

It may also contain the name of your current directory (a sort of electronic file folder in which contains you place files that are somehow related to each other). For example:

**A:\LETTERS>**

indicates you are using the disk in drive A, and are in the directory called LETTERS.

If you are working in drive C the computer will have a C:> prompt (typically known as the C prompt). Typing LETTER1.DOC after the prompt (the screen will display this: C:>LETTER1.DOC) and pressing < > tells the computer to locate that file on the C

drive. The computer then opens that file and displays it on the screen.

The same procedure is followed to call up a file which is on a disk located in either the A or B drive, except that the prompt will be either the A prompt (A:>) or the B prompt (B:>).

If you are working in one drive and the file you wish to locate or use is in another drive, you will first have to change drives before the file can be brought to the screen. Word processing programs will do this within themselves. Other software, including DOS, requires you to identify the file you need by using its pathname. For example,

**A:\LETTERS\LETTER5.DOC**

will cause the computer to look on the disk in drive A in a directory called LETTERS for a file named LETTER5.DOC.

### *To Change Drives*

Changing from the A to the C drive is easily done.

|                        |     |                             |
|------------------------|-----|-----------------------------|
| On the screen you see: | A:> | (the on-screen prompt)      |
| You now type:          | C:  | (A:C: is now on the screen) |
|                        |     | press < >                   |
| You now see            | C:> | (the new on-screen prompt)  |

If you do not specify a drive, DOS automatically searches the default drive. On computers with hard disk drives, the C drive is usually the default drive.

### *Backing up your data*

It is best to always make copies of your software program disks and your data disks. This provides you with a second copy, just in case you accidentally delete needed files or you damage your disks. You can then use the program copies you made instead of the expensive originals. Back up your copies frequently, particularly if you repeatedly add data or modify your files.

Establishing a routine of backing up any files you have worked on when you are

finishing a session at the computer is an excellent idea.

*Turning off the system*

To turn off the computer, return from the root directory, C:\>, and remove any floppy disks from the drives. Then you can turn off the computer. Do not turn the computer on again for at least two minutes.

# DOS

## Introduction

DOS is a disk operating system consisting of a variety of programs which allow you to run application programs (programs designed to do a particular task or set of tasks, such as ENABLE™, LOTUS 1•2•3™, and SPSS-PC+), store, and interact with files on your disk. It also provides the capability to use a printer and other peripheral devices. Basically, DOS translates information received from the keyboard into the binary code which the computer's CPU understands. Knowledge of a variety of DOS commands is both necessary and useful to the PC computer user. Knowing these commands will allow you to format your disks so they may be used, copy and store files, and delete files which are no longer useful. There are two versions of DOS, each developed by a different company but both very similar. The commands presented here will work in either version of DOS.

## *Using DOS*

### DOS Commands

DOS commands must be typed exactly as they appear in these notes or a DOS manual. Small differences may seem trivial because humans can infer meaning despite errors in text, but computers cannot. You will quickly find out that typing “;” when you should type “:” will result in an error message being displayed and your command not being executed. This sort of mistake is common, particularly when beginning, so don't worry when it happens to you. Just retype the command.

The only exception to the rule of exact typing is that you may type in either upper case (CAPITAL) letters or lower case letters. For ease of instruction, all DOS commands will be in capitals throughout this manual. To send the command typed on the keyboard to the CPU, you must always press either the [Return] or [ENTER] key. Examples do not include the [ENTER] (< >) command, because it is always used, but be sure to press it unless instructed not to do so.

### Starting DOS

Starting DOS (also called “booting DOS”) can be done in two ways. The first way, used when the computer is off, is to put the diskette containing DOS (the “DOS disk”)

into disk drive A and turn the computer on. This is called a "cold boot." The second way, when the computer is turned on, is to put the DOS disk into drive A and type simultaneously the [Ctrl] - [Alt] - [Del] keys. (The easiest way to type all three at once is to hold down two of them and then press the third.) Rebooting when the computer is turned on is called a "warm boot." If you are starting from a hard disk, you may have DOS start automatically.

### Stopping a DOS Command

To stop DOS from completing a command once you have pressed < >, press [Ctrl] and [Break]. This is a DOS command which does not require that you press the < > key.

### Useful Keys

Some useful keys to know about when using DOS, and their functions, are presented below.

|  |  |
|--|--|
| Press [Enter] (< >)                                | To enter a DOS command                         |
| Press [Break]                                      | To stop a DOS command from completing its task |
| Press [Backspace]                                  | To correct an error when typing a DOS command  |
| Press [Print Screen]<br>(Prt Sc on some computers) | To print whatever is on the screen             |

### *Working with Files*

#### Files and Where they are Kept

A file is a collection of information that is stored together for preservation or reference. You can preserve Ministry records, data files, or useful documents. For reference you can store current reports, personnel information, and correspondence.

Creating a file may be viewed as grouping related information so that it can be easily accessed. Files are stored on either floppy diskettes (disks) or fixed (hard) disk drives.

#### Naming files

Good filenames are descriptive and easily remembered. These rules apply when

naming a file: (1) Files have a filename and an optional extension. For example:

LETTER1.TXT

LETTER1 is the filename and TXT is the extension. A filename with an extension is usually called the file specification (filespec).

**NOTE:** You cannot use the following characters in a filename or extension: “ \ / [ ] : ; | < > + = . , \* ? nor can you insert a blank or space in a filename. You can mix letters, numbers, and symbols as desired.

Filenames can be up to 8 characters long (7 in Arabic/DWA). Extensions can be up to 3 characters long (2 in Arabic/DWA). Filenames and extensions are always separated by a period. If you use both a filename and an extension you must use both whenever you call up that file on the computer.

The following extensions have special meanings and are used by DOS. Avoid using them unless the computer automatically adds them to your filename, as will occur when using some programs.

|      |      |      |      |      |
|------|------|------|------|------|
| .BAK | .BAS | .BAT | .CHK | .COM |
| .EXE | .MAP | .OBJ | .REC | .SYS |

### Pathnames

For DOS to locate a file that is not located in the current directory, you must tell DOS where to locate it. You do this by specifying a pathname. The pathname is a sort of electronic road to the file.

A **pathname** lists a **drive**, a **directory** and a **filespec** with a series of backslashes (\) separating each of them. A **path** is a list of directory names separated by backslashes. A complete pathname is written as:

d:\DIRECTORY\FILENAME.EXT

where d: is the drive name (usually A:, B:, or C:), DIRECTORY is the name of your directory (enter as many directory names as there are in the branch to the file you want to use), and FILENAME and EXT is the file that you want.

If the diagram shows the tree for your fixed drive C, then the pathname for the file REPORT2.DOC would be:

**C:\PROGRAMS\MOCSAR\REPORT6.DOC**

### Wildcards

Wildcards give you access to several files with just one command. You can use either \* or ? as wildcards in either filenames or extensions. You can substitute the wildcard characters for any character or group of characters in the filespec. The wildcard \* can be used in place of 1 - 8 characters, and the wildcard ? in place of one character.

**NOTE:** Be careful when using wildcard characters. If they are not used properly you may accidentally erase important files. For example:

**DEL LET\*.TXT**

will delete all the .TXT files that begin with LET. These may include:

**LETTER1.TXT**

**LETTER2.TXT**

**LETDOWN.TXT**

and so on, when you may have wanted to delete only the "letter" files.

**NOTE:** \*.\* specifies all files in the default (current) directory. Therefore, \*.\* must be used with great care.

### **Directories**

Files are stored in a directory. Usually related files are stored together. DOS updates the directory each time you add, delete, or revise a file. In addition to the filename, the directory stores other information about your files. The screen typically looks like this when displaying a directory:

Volume in drive A has no label

Directory of A:\Mamoud

|              |       |      |         |                             |
|--------------|-------|------|---------|-----------------------------|
| .            | <DIR> |      | 8-12-88 | 2.35p                       |
| ..           | <DIR> |      | 8-12-88 | 2.35p                       |
| letter1 txt  |       | 3207 | 8-13-88 | 9.00a                       |
| letter4      |       | 6754 | 8-23-88 | 11.45a                      |
| demand87 doc |       | 4332 | 8-23-88 | 1.37p                       |
| supply87 doc |       | 3321 | 8-24-88 | 9.56a                       |
|              |       |      |         | 6 file(s) 345876 bytes free |

The first column lists the filenames, for example: demand87.

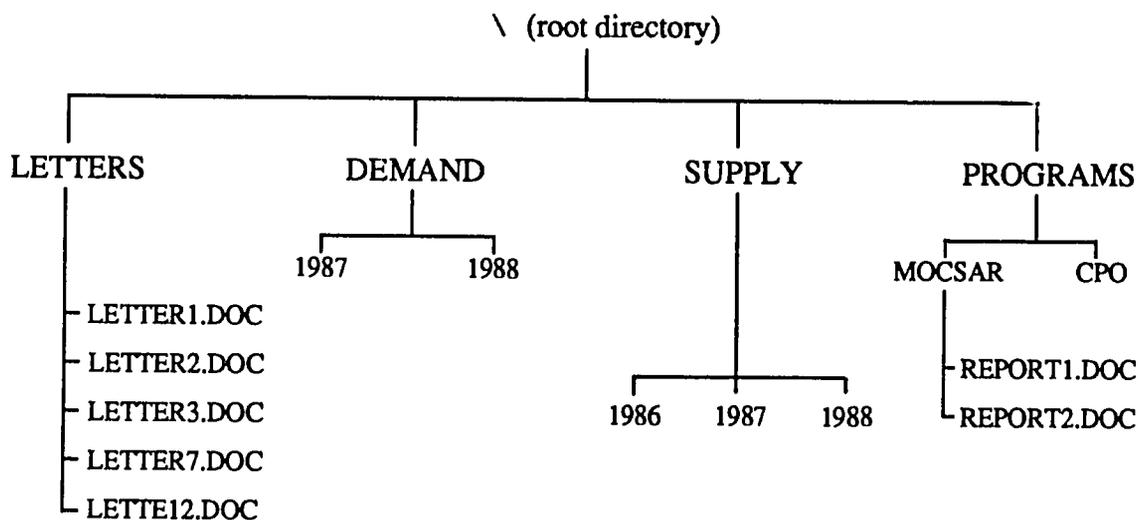

The second column lists the extensions, for example: txt.

The third column lists the current size of the file in bytes, for example: 3207.

The fourth and fifth columns list the date and time the file was last changed, for example: 8-12-88, 2.35 p.

### The directory structure

DOS has a directory system that allows you to group files. First, you can group related files into directories and subdirectories, such as LETTERS or 1986 (see below), then you can group related directories in a structure called a tree. The tree is also called the root directory. The root directory is the main directory on a disk, and it cannot be deleted. The "tree" grows as directories are added. This is illustrated on the following chart:

### *Deleting a directory: RMDIR*

You can only delete a directory if it is empty. It cannot contain any files or subdirectories. You cannot delete the root directory.

Use the **DIR** command (see page D-11) to list the files and subdirectories on your disk, and use the **DEL** command (see page D-17) to delete the files. To delete the subdirectory **MOCSAR** you must first delete the subdirectory **LETTERS**. After deleting all files the following command would delete the **LETTERS** subdirectory:

**RMDIR\MOCSAR\LETTERS**

Then to delete the **MOCSAR** subdirectory, type:

**RD\MOCSAR**

Both directories will then be deleted.

**NOTE:** You should backup any files you need (copy them to another drive or directory) prior to deleting the files from a directory which is to be deleted.

**NOTE:** **RD** is usable as a short form of **RMDIR**, as shown above.

### *Changing directories*

To work in another directory you use the change directory command, **CHDIR**. If you are working in the root directory and wish to change to the **MOCSAR** subdirectory, you enter:

**CHDIR\PROGRAMS\MOCSAR**

This will take you to the **MOCSAR** subdirectory of the **PROGRAMS** subdirectory. If you are moving to a directory that is an immediate subdirectory of the one you are working in, do not type the backslash. For example, if you are moving from the root directory to the **DEMAND** subdirectory, you could type **CD** as a short form of **CHDIR**:

## CD\DEMAND

If you want to display the name of the current directory, type:

CD

## DOS Command Summary

### *What is a DOS command?*

A command is an instruction telling DOS what to do. You can use DOS commands to:

- copy, display, compare, rename, and delete files
- backup and restore files
- format disks so they may be used in the computer
- copy entire disks
- perform many other functions

Command syntax refers to how the command is written: what words and symbols are used, and in what order they are. Order is very important. The syntax consists of two parts: the name of the command followed by the options that give instructions or information to DOS. It is important to type the command exactly as shown. For example:

### **DIR/P**

where **DIR** is the name of the command (short for directory) and requests a listing of the contents of a directory, and **/P** is an option which requests that it be presented page-by-page (one screen at a time).

### Selected DOS Commands

The following most commonly used DOS commands are explained in detail:

|                 |  |
|-----------------|--|
| <b>DIR</b>      | Gives a directory listing  |
| <b>FORMAT</b>   | Prepares a disk for use with DOS   |
| <b>COPY</b>     | Copies files   |
| <b>DISKCOPY</b> | Copies the contents of an entire disk  |
| <b>DELETE</b>   | Deletes specified files  |
| <b>TYPE</b>     | Displays the contents of a file  |
| <b>RENAME</b>   | Renames files  |
| <b>CHKDSK</b>   | Checks the directories and files on a disk for errors and provides a disk and memory status report |

**BACKUP**  
**RESTORE**

Backs up files (stores)

Transfers files from a backup disk to another disk

When you are completing the exercises for each command, take time to write down what you see on the screen. The already formatted disk given to you as part of this manual is called SAMPLES. The other disk provided to you is blank.

## DIR

The **DIR** command is used to get a listing of all the files and subdirectories in a specified directory.

A directory typically looks like this when displayed on the screen:

```
Volume in drive A has no label
Directory of A:\Mamoud
.                <DIR>          8-12-88    2.35p
..               <DIR>          8-12-88    2.35p
letter1 txt      3207          8-13-88    9.00a
letter4          6754          8-23-88   11.45a
demand87 doc    4332          8-23-88    1.37p
supply87 doc    3321          8-24-88    9.56a
                6 file(s) 345876 bytes free
```

The files are listed with their filenames, extensions, the size of the file, and the date and time when information was last entered into the file. After the file listing, **DIR** displays the amount of free space on the disk (in bytes) and returns you to the drive prompt ( for example, C:>).

DIR has several options available, which can be combined:

|                            |  |
|----------------------------|--|
| <b>DIR</b>                 | will list all the files in the current drive   |
| <b>DIR A:</b>              | will list all the files in the A drive   |
| <b>DIR/P</b>               | will list all the files on the C drive (the current drive) page-by-page (screen-by-screen) |
| <b>DIR A:/W</b>            | will list all the files on the A drive across the width of the screen                      |
| <b>DIR\PROGRAMS\MOCSAR</b> | will list all the files in the MOCSAR subdirectory of the PROGRAMS subdirectory            |

## FORMAT

The **FORMAT** command is used to instruct the computer to prepare disks for use with DOS. **FORMAT** also analyzes the entire disk for any defective tracks and prepares the disk to accept DOS files.

All new disks must be formatted before they are usable.

**Important:** **FORMAT** erases any existing data on a floppy or hard disk. If you format a disk that already has files on it, they will be destroyed, and you will lose the information in those files.

To format a disk, type:

### FORMAT A:/S

This command specifies the drive that the disk to be formatted is in, and the **/S** option.

The **/S** option copies three system files to the formatted disk:

|             |  |
|-------------|--|
| IBMBIO.COM  | this is a hidden file and will not appear in the directory listing |
| IBMDOS.COM  | this is a hidden file and will not appear in the directory listing |
| COMMAND.COM | this file will appear in the directory listing                     |

You can also use the following command to format a disk:

### FORMAT A:/V/S

This command will copy the system files to the disk and allow you to assign a volume label to the disk.

After formatting is complete you will be asked:

**Enter current volume label for drive A:**

During formatting the screen will provide information on the process:

**0 heads 0 cylinders**

This is followed by:

**Format Complete**

**xxxxxx bytes total disk space**

**xxxxxx bytes available on the disk**

**Do you wish to format another disk? Y/N**

Use the **DIR** command to see the directory of your disk. This will assure you the formatting procedure was accomplished correctly.

## **COPY**

The **COPY** command has several options. You can use the **COPY** command to copy one or more files:

- to the same disk and the same directory by specifying a new filename
- to the same disk but another directory and the same filename
- to the same disk, another directory, and a new filename
- to another disk with the same filename
- to another disk with a new filename

Here are examples of each of the above:

- Copying to the same directory with a new name.

Typing:

**COPY A:LETTER1.DOC BUDGET1.DOC**

will copy the file LETTER1.DOC into the same directory, naming it BUDGET1.DOC.

- Copying with the same filename to another disk.

Typing:

**COPY C:LETTER1.DOC A:**

will copy the file LETTER1.DOC from the C drive to the A drive.

- Copying with a new filename to another directory.

Typing:

**COPY C:LETTER1.DOC \DEMAND\BUDGET1.DOC**

will copy the file using the name BUDGET1.DOC to the directory called DEMAND.

- Copying with the same filename to another directory.

Typing:

**COPY A:LETTER1.DOC A:NEWTEXT.TXT**

will copy the file LETTER1.DOC directly from the A drive into another directory.

- Copying to a different disk with a different filename.

Typing:

**COPY C:LETTER1.DOC A:NEWTEXT.TXT**

will copy the file LETTER1.DOC from the C drive to the A drive and also rename it NEWTEXT.TXT.

When copying files you must always include a file specification, or use the wildcard character options. If you use any of the wildcard characters during copying, DOS will display the filenames as they are copied.

**CAUTION:** You should be very careful in using the wildcard characters in the **COPY** command, because you may destroy data. Always use the **DIR** command to display your filenames so you can be sure of the files you want copied.

You should always check your copying by looking at the directory which the copied file(s) went to.

## **DISKCOPY**

The **DISKCOPY** command copies the contents from one disk to another. The **DISKCOPY** command copies floppy disks only. It will not copy a hard (fixed) disk. The command is written like this:

**DISKCOPY A: B:**

this will copy the entire contents of the disk in the A drive to the disk in the B drive. DOS will display the following message when it is ready to make the copy:

**Insert source diskette in drive A:**

**Insert target diskette in drive B:**

**Press any key when ready...**

If you use an unformatted disk as your target disk, **DISKCOPY** will format it automatically. **DISKCOPY** copies the entire disk including the hidden files, and is much faster than copying files individually.

**NOTE:** Any files on the target disk prior to copying will be erased during the **DISKCOPY** procedure. If any files are on the target disk, be sure they have been copied to another diskette or are no longer useful.

## **DELETE**

The **DELETE** command allows you to delete specified files. For example, typing:

**DEL LETTER6.DOC**

will delete the file **LETTER6.DOC** from the current directory. **DEL** is a short form of **DELETE**.

You should be sure that you know the contents of a file before you delete it. Once a file is deleted, the information is gone, so take a little time to check the contents unless you are positive about them.

If you use the wildcard character **\*.\*** when deleting, DOS will ask you:

**“Are you sure (Y/N)?”**

Typing **Y** will delete all files in the specified directory.

**CAUTION:** You should be very careful in using the wildcard characters in the **DELETE** command, because you may accidentally destroy data you wish to keep. This can happen particularly easily if more than one person is using a given computer or set of disks. Always use the **DIR** command to display your file names so that you can be sure of the files you want to delete.

You should check your deleting by looking at the directory listing after the delete command is performed.

## **TYPE**

The **TYPE** command displays the contents of a file. Some files (program files, for example) will not be readable because they contain special control characters. Typing:

**TYPE LETTER6.DOC**

will display the contents of the **LETTER6.DOC** file on the screen.

You can also use the **MORE** command to display the contents of a file on the screen:

**MORE LETTER6.DOC**

This will display the contents on the file **LETTER6.DOC** one screen at a time.

## **RENAME**

The **RENAME** command allows you to change the name of one or more files. For example:

```
RENAME A:\LETTERS\LETTER6.DOC NEWTEXT.TXT
```

renames the file **LETTER6.DOC** located in the directory **LETTERS** to **NEWTEXT.TXT**.

If you do not specify a drive, DOS assume the current drive contains the file you wish to change. If you do not specify a path, DOS will assume the current directory of the default drive contains the file you are changing.

DOS will not permit you to rename a file to a name that already exists in that directory.

**REN** is a short form of **RENAME**. You may use either one.

**NOTE:** The **RENAME** command is valid only within the current directory. Use the **COPY** command when going to another directory.

## **CHKDSK (Checkdisk)**

The **CHKDSK** command allows you to check the files, directories, and subdirectories on a disk. It will identify errors which may be on the tracks of the disk, and will provide a disk and memory status report.

Simply type:

**CHKDSK**

DOS will check the disk and display a status report similar to this when finished:

**750000 bytes total disk space**  
**1024 bytes in hidden files**  
**620500 bytes in 26 user files**  
**128476 bytes available on disk**

**1024000 bytes total memory**  
**645884 bytes free**

## BACKUP

The **BACKUP** command allows you to backup (store) files on other disks. For example:

**BACKUP C:\LETTER\\*. \* A:**

will backup all files from the LETTERS subdirectory on the C drive (the source drive) on to the A drive (the target drive). You must indicate a target drive, and have a formatted disk in that drive. You can backup from any disk to any other disk, but the disk must be formatted in DOS. If you are backing up a fixed (hard) drive you may easily need more than one floppy backup disk.

**NOTE:** Files placed on a disk using the **BACKUP** command can only be accessed with the **RESTORE** command.

**NOTE:** If you do use more than one backup disk, you must take care to number them in the order which you use them, as the **RESTORE** command requires that you restore the files in order.

## **RESTORE**

The **RESTORE** command allows you to transfer one or more files from a backup disk to another disk.

### **RESTORE A: C:\LETTERS**

will transfer all files to the subdirectory LETTER, and to all subdirectories below it. Likewise, typing:

### **RESTORE A: C:\*.\***

will transfer all the files from the backup on drive A (the source drive) to the current directory in drive C (the target drive).

**RESTORE** displays the name of each file as it is transferred to the target disk.

**NOTE:** If you are restoring files from a series of disks take care to make sure that the disks are entered in the correct order.

**NOTE:** It is important that you follow the DOS messages carefully.

## DOS Exercises

1. a. Use the **DIR** command to find out what files are on your diskette. You may want to write the names of these files down for future reference.
  - b. Use the **DIR** command with the **/W** option, first looking on drive C, then on drive A.
  - c. Create a subdirectory using the **MKDIR** command. Call the subdirectory "BACK-UPS."
  - d. Create a subdirectory using the **MKDIR** command. Call the subdirectory "PRACTICE."
  - e. Look on your floppy disk using the \* wildcard as the filename and ASC as the extension. How many files are there?
2. a. Format a new disk using the **/S** option. Look at the directory on the newly formatted disk. What files are listed? Which ones have been placed on the disk? Are there files which have been placed on the new disk which have not been listed?
  - b. Reformat the disk you just formatted using the **/V/S** options. Use your name as the volume name. Look at the directory on this disk. What files are listed? Which ones have been placed on the new disk?
3. a. Copy the file, MEMO.ASC on your SAMPLES disk to the PRACTICE directory which is on that disk, using the same filename. Check the directory to be sure it is there.
  - b. Copy the file named PROGRAM1.ASC to the PRACTICE directory, changing the filename to EAPS.DES. Remember to look in the directory to be sure it was copied.
  - c. Try to copy file PROGRAM2.ASC into the same (current) directory using the same filename. What happens?

d. Copy the file PROGRAM1.ASC to the same directory under the filename CHOICE1.ASC. Is it in the directory?

e. Copy the file CHOICE1.ASC to the disk you formatted in Exercise 2. Use the same filename.

f. Copy the file PROGRAM2.ASC to the disk you used in (e) above, using the new filename CHOICE2.ASC.

4. Use the **DISKCOPY** command to copy the SAMPLES diskette containing the five practice files onto your other disk. Remember to look in the directory.

5. a. Use the **DELETE** command to discard the files (MEMO.ASC and EAPS.DES) you had copied into the subdirectory PRACTICE.

b. Delete the now-empty subdirectory, PRACTICE.

6. a. Using the **TYPE** command, display the file named PROGRAM1.ASC.

b. Now use the **MORE** command to examine the file named MEMO.ASC.

7. a. Using **RENAME**, change the name of PROGRAM2.ASC on your disk to:

### Practice.123

After you use the **RENAME** command, check the directory using the **DIR** command to be sure the name has been changed.

b. Now change the name back to what it originally was, using **REN**. Again, check the directory to be sure the name has been changed.

8. Use **CHKDSK** to check both the **SAMPLES** disk and the disk you copied using the **DISKCOPY** command. Write down the status reports for each one.

9. Using the **RESTORE** command, transfer the files you recently made backups of (**LETTER.ASC** and **REFERENC.ASC**) onto the **SAMPLES** disk into the subdirectory **BACKUPS**. What do you see in the directory which had the backup copies? What is in the **BACKUPS** subdirectory?

## ENABLE WORD PROCESSING

### Introduction

The information, instructions, guidelines, and exercises included in this section are designed to provide you with a basic working knowledge of Enable word processing. Once you have carefully read the first seven sections and the worked through the series of exercises you will be able to create and revise (edit) your own files (documents) and copy text from one file to another.

Almost every process in Enable can be performed using different commands, however, the commands listed in this text are the simplest Enable command for that process. When you become more familiar with Enable and the Enable documentation you may find it useful (and interesting) to work through all the top-line menu options at your leisure. After doing that you will rapidly become aware of the value of many of Enable's impressive features.

A few rules that apply to this text:

- When keys need to be pressed together the instruction will read:

press **Alt+C**

Meaning press the Alt and C keys at the same time.

- When keys need to be pressed in sequence the instruction will read:

press **F9**

**M**

**+**

Meaning press F9 then M then +.

The explanation on the right is simply to illustrate what each keystroke in the command represents.

Throughout the text, the symbol < > will be used to indicate that the Enter key must be pressed.

Section 7 is a comprehensive listing of Enable commands.

## Screens, Menus, and the Status Line

Getting to know your way around the Enable menus is essential if you are to become familiar with all Enable's features. Like most word processors Enable is menu driven; that is to say, you can select options from a series of menus. Although many of the instructions in this text do not rely on using the menu options, a working knowledge of the basics (listed below) is necessary to function within Enable.

### *The Sign-On Screen*

When you sign on to Enable from DOS the first thing you will see is the sign-on screen. The screen asks for the **date** and the **time**. It also asks whether you use **profiles**. DOS will automatically set the date and time so there is no need to respond to those prompts, and as installation of Enable involves the setting of a default profile you can simply access Enable by following the instructions on the bottom of the screen:

**Press End**

**NOTE:** A **profile** is a set of data that tells Enable how you want the software to function and what kind of hardware you are using. Enable users set a default profile that fits their own requirements.

### *The Main Menu*

After pressing End on the sign-on screen, the Main Menu appears. The Main Menu lists the sections of Enable that you can access. It moves from system options to program options to sub-options. You can use the arrow keys to move around the screen, selecting options.

## ENABLE(tm)

Select an option with the cursor and < >

Press Esc if you change your mind and F1 if you need help.

(System  
Options)

Use System Help MCM Return to DOS

(Program  
Options)

Word Processing Spreadsheet/Graphics Telecom DBMS/Graphics

(Sub-options)

Create Revise Print Dictionary Mail Merge

(This last line on the Main Menu shown lists the word processing options.)

### *The Top-Line Menu*

The top-line menu can only be accessed once you are working on a file. To access the top-line menu press **F10** and the top-line menu will appear across the top of the screen.

### Enable's Top-line Menu

EditOpts Layout Copy Delete Find MCM Print Save 1-DBMS 2-Spell Quit  
Displays draft/final reformat attributes comments paperclips blocks

The second line on the top-line menu displays the options available under **EditOpts** (Editing Options).

If you select an option from the top line menu (either by using the arrow keys and pressing the Enter key (< >), or by typing the first letter or number of the option) a pull-

down menu will appear on the screen listing the sub-options.

Enable's pull-down menu for the **Layout** option:

Select the layout option you want by typing the option number.

1. Insert a ruler
2. Insert default ruler
3. Set line spacing
4. Insert a page break
5. Insert a header
6. Insert a footer
7. Use special characters
8. Create a footnote
9. Table of contents options
0. Index Options
- A. Shorthand

Pressing **Esc** will delete the pull-down and top-line menus one by one. Press once to delete the pull-down menu, and once again to delete the top-line menu.

### *The Status Line*

The status line is located at the bottom of the screen. It provides information about the file you are currently working on:

**#1 REF/B A:SAMPLE.WPF DRAFT L00010C060**

- |                     |   |
|---------------------|---|
| <b>#1</b>           | Refers to the window that is open and currently in use.   |
| <b>REF/B</b>        | Refers to the Reformat mode. If the text is edited it will adjust to fit in the margins set for the document. |
| <b>A:SAMPLE.WPF</b> | The drive (A:) the filename (Sample) and the extension (.wpf).  |

**DRAFT**

The document appears on the screen in the draft mode; this is not the way it will look when it is printed.

**L00010C060**

Gives the exact location of the cursor in the document. In this case Line 10 and Column 60.

**Accessing Files***Revising a file*

- 1 - Access **ENABLE** by typing **EN** at the **C:** prompt. (An autoexec batch file on the C drive simplifies access to **Enable**; if the autoexec file is not installed on your C drive, type **EN200**.)
- 2 - View the next screen, follow the instructions at the bottom of the screen. Press **End** to get the Main Menu.
- 3 - Using the arrow keys select: **Use System**  
**Word Processing**  
**Revise**
- 4 - Type in the name of the file you wish to revise: **A:filename.ext** if the file is on A drive, or **C:filename.ext** if the file is on the C drive.

*Creating a File*

- 1 - Access **Enable** by typing **EN** at the **C:** prompt.
- 2 - View the next screen, follow the instructions at the bottom of the screen. Press **End** to get the Main Menu.
- 3 - Using the arrow keys select: **Use System**  
**Word Processing**  
**Create**
- 4 - Type in a name for the file you wish to create **A:filename.ext** to create a file on the A drive, or **C:filename.ext** to create a file on the C drive.

*Setting a Ruler for a Document*

The ruler defines the width of the text that your document is restricted to and contains

any tab markers you may wish to set. The ruler appears at the **top of the document**.

### The Enable Ruler

L-----T-----T-----+-----R

When you create a file, you will be asked if you wish to accept the default ruler (the default ruler that was set when Enable was installed). If you do press < >. If you wish to change the default ruler, use the following letters:

L for the Left Margin.

T for the position of a Tab.

R for the Right Margin

Move the cursor to the position you select for the left margin and press **L**.

Position the cursor for any tabs you would like, and at each tab position press **T**.

Move the cursor to the position you would like for the right margin and press **R**.

Press < >.

### *Saving a File*

1 - Press **F10** (to get the top-line menu)

2 - Select Save by typing its first letter: **S**

3 - Select Accept by pressing < >

The status line will show a **BUSY** notation as the file is saved.

You can also save a file by typing **Alt+F10** then < >.

### *Quitting a file*

1 - Press **F10**

2 - Press **Q** for Quit

3 - Press **Y** for Yes

**NOTE:** This will **not** automatically save your file.

## Enable Commands

### *Function Keys*

|                          |  |
|--------------------------|--|
| <b>F1</b>                | Displays the help screen. (Try this function to get help from Enable.) |
| <b>F2</b>                | Used in cursor control (with other keys) for moving around the screen. |
| <b>F3</b>                | Inserts a line above the cursor.                                       |
| <b>F4</b>                | Deletes a word at the cursor.  |
| <b>F5</b>                | Repeats the current text find activity.                                |
| <b>F6</b>                | Repeats the current text find and replace activity.                    |
| <b>F7</b>                | Marks a block of text.   |
| <b>F8</b>                | Copies a block of text.  |
| <b>F9</b>                | Used in expert commands (with other keys).                             |
| <b>F10</b>               | Displays the Top-Line Menu.  |
| <b>Alt+F1</b>            | Displays function key chart (this chart).                              |
| <b>Alt+F2</b>            | Prints the file.   |
| <b>Alt+F3</b>            | Deletes a line at the cursor. (Esc will undo the delete.)              |
| <b>Alt+F4</b>            | Centers the text on that line.   |
| <b>Alt+F5</b>            | Copies a block from another window.                                    |
| <b>Alt+F6</b>            | Inserts a ruler above the cursor.                                      |
| <b>Alt+F7</b>            | Deletes block markers.   |
| <b>Alt+F8</b>            | Moves a block.   |
| <b>Alt+F10 &lt; &gt;</b> | Saves a file.  |

### *Expert Commands*

#### Moving Around the Screen

|                  |  |
|------------------|--|
| <b>PgUp</b>      | Moves the screen up half a page.               |
| <b>PgDn</b>      | Moves the screen down half a page.             |
| <b>Ctrl+PgDn</b> | Moves the screen down a full page.             |
| <b>Ctrl+PgUp</b> | Moves the screen up a full page.               |
| <b>Ctrl+Home</b> | Moves the cursor to the beginning of the file. |
| <b>Ctrl+End</b>  | Moves the cursor to the end of the file.       |
| <b>Tab</b>       | Moves the cursor to the next tab marker.       |
| <b>F2+Home</b>   | Moves the cursor to the beginning of the page. |
| <b>F2+End</b>    | Moves the cursor to the end of the page.       |

## The Insert and Delete Keys

|               |                                  |
|---------------|----------------------------------|
| <b>Insert</b> | Turns the insert function On/Off |
| <b>Delete</b> | Deletes the letter at the cursor |

## Working with Blocks - Moving, Copying, and Deleting

Text to be copied or moved is first put into a block. Before you can move, copy or delete a block of text the block has to be highlighted on the screen. This is done by marking (setting) the beginning and end of the text to be blocked.

### • Setting a Block:

#### 1. To set a block of text across the screen:

- a. Position the cursor on the first character of the text to be marked and press **F7**.
- b. Move the cursor to the last character of the block to be marked and press **F7** again. This will highlight the text in the block.

#### 2. To set a column of text as a block:

- a. Position the cursor on the first character of the text to be marked as a column block (the upper left corner of the column) and press **F7**.
- b. Move the cursor to the last character of the block to be marked as a column block (the lower right corner of the column) and press **Shift+F7**. This will highlight the text in the block.

### • Removing a Block Setting:

If you make a mistake setting a block, simply place the cursor anywhere on the block, press **Alt+F7**.

### • Moving a Block

Position the cursor at the new position, press **Alt+F8**.

- Copying a Block

Position the cursor at the position for the copy to appear, press **F8**.

- Deleting a Block

Press **F9**

**Del**

**B**

### Copying Text from File to File

If you are working in one file and wish to copy text into that file from another file, it is necessary to bring that second file to the screen. This is done by opening a second window (the file you are working on occupies the first window). Window numbers can be located at the bottom left corner of the screen on the status line.

- When you are working on one file and wish to open another:

Press **F9**

**W**

**O**

Enable will then display the Main Menu and you can proceed to recall your first file.

Press **F9**

**W**

**B**

to go back to your first file. You can use **F9 W B** to switch between windows.

Find the text in the second window that you wish to copy and mark it as a block (using **F7** and **F7**, or **F7** and **Shift+F7** if the text is in a column). Use **F9 W B** to return to your first window, place the cursor at the place you want the copied block to appear.

Press **F10**

**C**

**1**

Enable will now display:

|                |                                  |
|----------------|----------------------------------|
| Accept Options | Change Options                   |
|                | What: Block<br>From: This Window |

Select Change Options < >, select Block < >, select Other Window < >.

Enable will display a Window Summary Options screen. Select the number of the screen you wish to copy from, press that number and that window will appear showing the highlighted block.

Press **Alt+F5**

The block will be copied to your first window.

**Remember to save your file.**

To close the second window:

Use **F9 W B** to return to the second window,

Press **F9**

**W**

**C**

Enable will close that window and return you to your first file.

### Deleting

Deleting may be done quickly on single characters, words, sections of text.

- To delete a single space:

Press **Del** or Backspace (**BkSp**)

- To delete words:

Position the cursor on the word you wish to delete,

Press **F4**

By holding down the **F4** key you can delete many words quickly.

- To delete lines:

Position the cursor on the line you want to delete, press **Alt+F3**.

To delete sections of text:

- To delete everything from the cursor to the top of the screen:

Press **F9**

**Del**

**Home**

- To delete everything from the cursor to the end of the screen:

Press **F9**

**Del**

**End**

- To delete everything from the cursor to the top of the file:

Press **F9**

**Del**

**Ctrl+Home**

- To delete everything from the cursor to the end of the file:

Press **F9**

**Del**

**Ctrl+End**

- To delete everything from the cursor to the end of the sentence:

Press **F9**

**Del**

**S**

- To delete everything from the cursor to the end of the paragraph:

Press **F9**

**Del**

**P**

### Restoring Text

Text may be recovered immediately after being deleted by using the following commands:

- To restore the last deleted piece of text,  
Press **F9**  
**U**

This will restore the text where the cursor is resting.

- To restore a line that was deleted using the **Alt+F3** command, press **Esc**.

### Finding and Replacing Text

If you wish to replace one word with another word in your text, it may be made easier by using Enable's find and replace feature. If, for example, you wish to replace the word assessment with the word evaluation,

Press **F9**  
**F**  
**R**

Enable then asks you to type in the string of letters you wish to find:

**Enter String to Find:**

You are then asked to type in the string of letters that you wish to replace them with:

**Enter Replace String:**

**NOTE:** When using computers you will find that any list of characters or symbols are referred to as a string.

You will then be asked if you wish to accept or change the options:

| Accept Options | Change Options  |
|----------------|---|
|                | <b>Case: Ignore</b><br><b>From: Current</b><br><b>To: Bottom</b><br><b>Col: All</b> |

If you select Accept Options the search will ignore whether the text has upper or lower case letters and search for any instance of the text. It will begin to search from the current position of the cursor and will search to the bottom of the document, searching for the text in all columns of the text.

If you select Change Options you will be asked to make the following choices:

- |                                      |  |
|--------------------------------------|--|
| <b>Case: Ignore</b>                  | (The computer will search for any instance of the word regardless of how it is typed - upper or lower case.)   |
| <b>As entered</b>                    | (Type exactly the text you are looking for.)   |
| <b>From: Top<br/>and To: Current</b> | (Search will begin at top of document.)<br>(If From - search begins at cursor. If To - search ends at cursor.) |
| <b>Bottom</b>                        | (Search will end at the bottom of the document.)   |
| <b>Cols:</b>                         | (Type all, or the starting and ending column numbers for your search.)   |

Enable has a default feature on the find and replace option that only changes the first occurrence of the word you wish to change. In order to continue the find and replace option, press **F6**.

Then press **F6** for each progressive word replacement. If you wish to find the word before you replace it, press **F5**. Then, if you wish to replace it once you have found it, press **F6**.

### Draft and Final Form

Draft form is the name given to the form of the document as you type in the text and make various adjustments and additions. Final form is the name given to the document as it will appear when printed. It often helps to change your document from draft to final form, as this will permit you to see the exact layout of the document before you print it.

- To change the document to final form:

Press **F9**

**O**

**D**

- To change the document back to draft form, again:

Press **F9**

**O**

**D**

You can move between these two forms at will, the only thing that will happen is that page breaks will appear in your draft document.

The status line indicates whether the document on the screen is in draft or final form. When the document is in final form, a line of x's will be displayed on the side of the screen to show where you cannot enter text. These represent the top and bottom margins of the printed document

### Inserting a page break

When viewing your document in final form you may decide that you are not happy with the places that Enable assigns as page breaks. (Page breaks occur exactly between pages, and indicate what will appear on each printed page.)

You can define your own page breaks for a file. This can be done in either draft or final form - so you may define page breaks as you review your document just before printing. Place the cursor where you want the page break to occur:

Press **F10**

**L**

**4**

**<>**

This process will add a user defined page break to your document. The user defined page break can be removed by placing the cursor on the page break line and pressing **ALT+F3**. This can only be done in the draft mode.

#### Saving files under a different Filename

To save a file under a different filename (changing the filename):

- 1 - Press **F10**
- 2 - Select Save by typing **S**
- 3 - Use the arrow key to select **Change** and press **< >**
- 4 - Select **ENABLE** by pressing **< >**
- 5 - Select **ENTIRE FILE** by pressing **< >**
- 6 - Select **NEW NAME**
- 7 - Type in the new name (including a drive specification if the file is to be saved to a different drive than the one currently in use) and press **< >**. (The extension .wpf will be added automatically unless you specify a different extension)
- 8 - Select **EDIT** to continue working on the Sample file

#### Printing Files

Check that the printer is on and has paper, then press **Alt+F2**. This will print using the settings already in the printer command. Changes to certain aspects of the appearance of the printout (font type, margins, etc.) may be done from within the **Print** subsection of the Top Line Menu (or in some cases from within the file itself.)

#### **Advanced Features**

##### *Text Enhancement using Enable's Attributes*

To enhance the appearance of your finished document you may choose from a series of text attributes (underlining, bold, etc). To view the range of available text attributes:

Press **F10**

**E**

**E**

To turn off the display, again:

Press **F10**

**E**

**E**

You can use attributes either when you are entering text or while revising or editing a file. The status line will display the attribute(s) currently being used.

Attribute selection commands:

|                                    |              |
|------------------------------------|--------------|
| Bold text                          | <b>Alt+B</b> |
| Underlined text                    | <b>Alt+U</b> |
| Compressed printing                | <b>Alt+C</b> |
| Wide printing                      | <b>Alt+W</b> |
| Changing lower case to upper case  | <b>Alt+F</b> |
| Changing upper case to lower case  | <b>Alt+K</b> |
| To remove attributes (text Normal) | <b>Alt+N</b> |

Attributes may be used together, for example to have bold, underlined, text that is wide printed, press **Alt+B**, then **Alt+U**, then **Alt+W** or, hold down the **Alt** key and then press **B** then **U** then **W**.

Attribute use commands:

|                                   |               |
|-----------------------------------|---------------|
| To apply attribute to a character | <b>Ctrl+C</b> |
| To apply attribute to a word      | <b>Ctrl+W</b> |
| To apply attribute to a line      | <b>Ctrl+L</b> |
| To apply attribute to a sentence  | <b>Ctrl+S</b> |
| To apply attribute to a paragraph | <b>Ctrl+P</b> |

To use Enable's attributes:

- 1 - Position the cursor on the character where you want the attribute to begin.
- 2 - Use an attribute selection command to set the attributes you require.
- 3 - Press the attribute use command you want.
- 4 - Turn off the attribute by repeating the attribute selection command used in 2 above.

### *Line Spacing*

Under normal (default) conditions Enable will print a document single spaced. However, there are times when you will want to change the spacing on either part or all of a document. Position the cursor at the point in the document at which you would like to change the spacing:

Press **F9**  
**Ins**  
**(n)** (spacing number)  
**S**

For (n), type 2 if you want double spacing, 3 if you want triple spacing, and so on.

**NOTE:** Setting the line spacing in a document will cause the spacing to change throughout the remainder of the document. If you want to change back to single spacing (or to any other spacing) repeat the F9 Ins (n) S command at the point in the document at which you wish to change the spacing.

### *Setting New Margins*

If you are already working in a document and wish to change the margins (set a new ruler),

Press **Alt+F6**.

A new ruler line will be displayed, adjust the margins and tabs to your specifications (see setting a ruler in Section 3 A) press < > when finished.

### *The Enable Calculator*

The Enable calculator will permit you to perform calculations in two ways:

1. Across the page - in this mode your mathematical expression will be replaced with the answer when the calculation is performed. The process involves using your line of text as a spreadsheet cell. You can add, subtract, divide, multiply, and

raise a number to a power. You must use the following symbols:

- + add
- subtract
- \* multiply
- / divide
- () enclose an expression
- \*\* raise to a power

You must not leave a blank space anywhere in the calculation. Type the expression to be calculated, then place the cursor in the space immediately after your last character and press:

**F9 +**

Example:  $(54*18)+(564-76/897)**2$

Place the cursor immediately after the 2 and press **F9 +**. The expression will disappear and be replaced with the answer (**318,972.44**) correct to 2 decimal places.

2. Down the page (by the column) - in this mode the column of figures remains when the calculation is performed. Only addition and subtraction can be performed. Type your numbers in a column, any that are to be subtracted must be preceded by a minus sign (-).

Mark the entire column as a block, position the cursor under the block:

Press **F9**

**M**

**+**

The column will remain, and the answer will be displayed on the last line.

Example:

|      |
|------|
| 459  |
| -98  |
| 97   |
| -987 |
| 4321 |
| 1876 |

Mark the entire column as a block (place the cursor to the right of the 4 in 459, press **F7**. Move the cursor under the 6 in 1876, press **Shift+F7**. The column will be highlighted. Move the cursor under the 1 in 1876 and press **F9 M +**. The answer (5,688.00) will be displayed under the column.

### Checking Spelling - Spell/Check

To utilize Enable's Spell/Check:

- 1 - Press **F10** (top-line menu)
- 2 - Select 2 (Spell)

You will be asked:

|                |                   |
|----------------|-------------------|
| Accept Options | Change Options    |
|                | Double Words: Yes |
|                | Scan From: Top    |

The Double Words option permits you to ask the computer to indicate when you have typed the same word twice sequentially.

**Check Double Words: Yes No**

The other option, **Scan From**, asks where you would like the spell check to begin.

**Scan From: Top Current**

Select **Current** if you want the spell check to begin at the cursor. Select **Top** if you want the spell check to begin at the top of the document. The default spell check is from the top of the document to the bottom.

Once you have selected the options you require, the spell check begins to verify your spelling. When a word is identified that Enable does not recognize, the **Word-Not-Found** menu is shown under the suspect word:

## Word-Not-Found - Albanny

0. Enter Replacement
1. Choose Replacement
2. Ignore Word-Not-Found
3. Add - Lower Case
4. Add - As Entered
5. Add - Retyped Word
6. Exit Enable/Check

### Word-Not-Found Options:

Enter a Replacement:  
(Option 0)

Selecting this option permits you to enter a word or string up to 35 characters in length. Pressing < > causes Enable to replace the Word-Not-Found with the typed string and to continue scanning for the next Word-Not-Found.

Choose Replacement:  
(Option 1)

Selecting this option tells Enable to list up to four possible spellings for the Word-Not-Found. If you wish to select one of the words Enable offers as the replacement for the Word-Not-Found type the number corresponding to that word. If the word you want is not there type Esc to return to the Word-Not-Found menu, or 0 to enter your own replacement.

Ignore Word-Not-Found:  
(Option 2)

Selecting this option instructs Enable to ignore the Word-Not-Found and to continue scanning the text.

Adding Words-Not-Found  
to the User Created  
Dictionary:

Selecting any of these options instructs Enable to add the Word-Not-Found to the user created dictionary. You may add the Word-Not-Found in either (using Options 3,4, and 5):

Lower Case - Option 3

As Entered - Option 4

Retyped Word - Option 5

If you select Option 5 Enable asks:

**Should Word-Not-Found be Replaced with Retyped Word.**

Select either yes or no.

Exiting Spell/Check:  
(Option 6)

Selecting this option instructs Enable to stop the spell/ check and return you to your document. A summary screen will be displayed, press Esc and Enable returns to the document.

**The Word Duplication Option.** If Enable meets a word that occurs twice in succession in the text the following will be displayed on the screen:

**Word Duplication - Yemen**

- 1. Delete Duplication**
- 2. Ignore Error**
- 3. Exit Enable/Check**

Delete Duplication:

Selecting this option will cause Enable to delete the duplication leaving the word to occur only once at that place in the text.

Ignore Error:

This option instructs Enable to ignore the duplication and continue the spell/check.

Exiting Spell/Check:

Selecting this option instructs Enable to stop the spell/ check and returns you to your document. A summary screen will be displayed, press Esc and Enable returns to the document.

## Expert Command Listing

Remember that commands listed as **Ctrl+S** require that the two keys listed be pressed simultaneously.

Commands listed as **F9 O C B** require that the keys listed be pressed sequentially.

Remember, the command **< >** represents the Enter key.

|                       |   |
|-----------------------|---|
| <b>&lt; &gt;</b>      | Closes a paragraph or section of text         |
| <b>Ctrl+&lt; &gt;</b> | Creates a paragraph at the cursor             |
| <b>Esc</b>            | Restore the last deleted line (at the cursor) |

### Function Keys

|                          |   |
|--------------------------|---|
| <b>F1</b>                | Displays the help screen                      |
| <b>F2</b>                | Used in cursor control (with other keys)      |
| <b>F3</b>                | Inserts a line above the cursor               |
| <b>F4</b>                | Deletes a word at the cursor                  |
| <b>F5</b>                | Repeat current text find activity             |
| <b>F6</b>                | Repeat current text find and replace activity |
| <b>F7</b>                | Marks a block of text                         |
| <b>F8</b>                | Copy block                                    |
| <b>F9</b>                | Used in expert commands (with other keys)     |
| <b>F10</b>               | Displays the Top Line Menu                    |
| <b>Alt+F1</b>            | Displays function key chart                   |
| <b>Alt+F2</b>            | Prints the file                               |
| <b>Alt+F3</b>            | Deletes a line at the cursor                  |
| <b>Alt+F4</b>            | Centers the text on that line                 |
| <b>Alt+F5</b>            | Copy block from another window                |
| <b>Alt+F6</b>            | Insert a ruler (above the cursor)             |
| <b>Alt+F7</b>            | Deletes block markers                         |
| <b>Alt+F8</b>            | Move block                                    |
| <b>Alt+F10 &lt; &gt;</b> | Save  |

### Calculator

|               |                               |
|---------------|-------------------------------|
| <b>F9 +</b>   | Calculate expression          |
| <b>F9 M +</b> | Calculate columnar expression |

Draft and Final Form

F9 OD Draft Form - Final Form ON/OFF

Inserting a Page Break

F10 L 4 < > Inserts a page break at the cursor

Changing the Line Spacing

F9 Ins (n) S Changes line spacing to the number (n) specified

Finding Text

F9 F T Find text

F9 F M Find and mark text

F9 F R Find and replace text

Deleting

F9 Del B Delete marked block

F9 Del < > Delete paragraph marker

F9 Del P Delete from cursor to end of paragraph

F9 Del End Delete from cursor to end of screen

F9 Del Home Delete from cursor to top of screen

F9 Del S Delete from cursor to end of sentence

F9 U Undo last delete (replaces text at the cursor)

Attributes

Alt+B Bold text

Alt+U Underlined text

Alt+C Compressed printing

Alt+W Wide printing

Alt+F Changing lower case to upper case

Alt+K Changing upper case to lower case

Attributes may be used together, for example to have bold, underlined, text that is wide printed, press Alt+B, then Alt+U, then Alt+W, or, hold down the Alt key and then press B then U then W.

Attribute Use Commands

|               |                                   |
|---------------|-----------------------------------|
| <b>Ctrl+C</b> | To apply attribute to a character |
| <b>Ctrl+W</b> | To apply attribute to a word      |
| <b>Ctrl+L</b> | To apply attribute to a line      |
| <b>Ctrl+S</b> | To apply attribute to a sentence  |
| <b>Ctrl+P</b> | To apply attribute to a paragraph |

Special Characters

|                 |                              |
|-----------------|------------------------------|
| <b>F9 O C B</b> | Characters to draw boxes     |
| <b>F9 O C O</b> | Turns off special characters |

## Exercises

*Text of Sample.wpf*

### MOCSAR - FULL PUBLIC SECTOR SURVEY

**PROPOSED SURVEY DATES: JUNE - SEPTEMBER 1989**

#### Element 1: Activity Planning

The formation of the MOCSAR survey team (most probably the six MOCSAR/IEES counterparts, Saeed Nasher and Ali Saeed Kaid) and setting of survey schedule and internal MOCSAR supervisory structure.

The modification of MOCSAR/IEES documents ("pre-final" survey instruments and code book) as necessary.

The development of training materials.

Document finalization; printing distribution, etc.

#### Element 2: Field Staff Training

The training of some 200 field staff and data coders, to be completed as a series of two to three day workshops given by MOCSAR/IEES counterparts with assistance from the consultants.

#### Element 3: Survey

To be conducted entirely by Yemenis, consultant assistance will concentrate on data integrity concerns and trouble shooting.

#### Element 4: Data Coding and Entry

Possibility/probability exists that CPO may enter all data once coded by MOCSAR. Consultants will oversee process and establish and implement quality control procedures.

#### Element 5: Data Analysis

To be conducted at MOCSAR by MOCSAR/IEES counterparts with assistance from the IEES team.

#### Element 6: Report Preparation

To be conducted at MOCSAR by MOCSAR/IEES counterparts with assistance from the consultant team.

## Exercise 1 - Revising, Editing, Saving, Printing, and Quitting a File

- 1 - Access **ENABLE** by typing **EN** at the **C:** prompt
- 2 - View the next screen, follow the instructions at the bottom of the screen. Press **End** to get the Main Menu
- 3 - Using the arrow keys select: **Use System**  
**Word Processing**  
**Revise**
- 4 - Type in the name of the file **A:Sample.wpf**
- 5 - Press **< >**
- 6 - Read through the text
- 7 - In the section **Element 1** replace the word **formation** with **preparation**
- 8 - Insert **a** between of and survey
- 9 - Delete the sentence **The development of training materials** and replace it with **A comprehensive set of training materials will be developed at this time.**
- 10 - Set the section that begins **Element 5** and ends with **IEES team** as a block and move it to the end of the document. Change the numbers of Elements 5 and 6. Insert any lines or spaces that are necessary to improve the look of the document.
- 11 - Save the file
- 12 - Save the file again under the new name **A:test1.wpf**
- 13 - Print the file
- 14 - Quit the file

## Exercise 2 - Using the Text Attribute Options and Changing Margins

- 1 - Retrieve the working file test1.wpf
- 2 - Set Enable for bold text (Alt+B)
- 3 - Change each title Element 1, Element 2, etc., to bold
- 4 - Remove the bold text option and replace it with the underline option, and underline the Element titles
- 5 - Change the title of the file so that it is both bold and underlined
- 6 - Print the file
- 7 - Remove all attributes from the text
- 8 - Put a blank line between each Element
- 9 - Using the Move Block command reverse the order of the Elements. (That is, change them so they begin with Element 1 and end with Element 6.)
- 10 - Go to the top of the page and insert a ruler (Alt+F6), setting the left margin at 4, tabs at 15 and 25 and the right margin at 65, press < > to reformat the document to that ruler.
- 11 - Center the titles, and change them to bold print
- 12 - Center the Element titles (Element 1, 2, 3, etc.) and underline them.
- 13 - Go to the blank line between Element 2 and 1, insert a ruler, setting the left margin at 15 and the right at 50, press < >
- 14 - Print the file
- 15 - Quit the file and return to DOS

### Exercise 3 - Creating and Editing a Short Budget

- 1 - Access Enable and create a file **test2.wpf**
- 2 - Set the margins at **5** and **65**, with a tab at **33**
- 3 - Type the following:

#### **SLEC Botswana - Proposed Budget**

October 1988 - February 1989

|  |                 |          |
|--|-----------------|----------|
| 1. Country Team Leader*                  | 5 mths. @ \$495 | \$ 2,475 |
| 2. Research Associate*                   | 3 mths. @ \$440 | 1,320    |
| 3. Secretary                             | 5 mths. @ \$200 | 1,000    |
| 4. CTL and RA Taxi                       |                 | 250      |
| 5. Computer Time at UB                   |                 | 250      |
| 6. Software                              |                 | 800      |
| 7. Misc. Supplies                        |                 | 300      |
| 8. Reports, drafts, Seminar papers, etc. |                 | 500      |
| 9. DHL                                   | 5 @ \$50        | 250      |
| 10. Telex                                | 10 @ \$30       | 300      |
| 11. Telephone, Mail                      |                 | 350      |

- 4 - Use the Enable calculator to total the dollars and print the file
- 5 - Change the document to look like the following (use the text attribute and block commands):

Botswana Survey - Proposed Budget

October 1988 - February 1989

Personnel

|                      |                 |          |
|----------------------|-----------------|----------|
| Country Team Leader* | 5 mths. @ \$495 | \$ 2,475 |
| Research Associate*  | 3 mths. @ \$440 | 1,320    |
| Secretary            | 5 mths. @ \$200 | 1,000    |

Travel

|      |  |     |
|------|--|-----|
| Taxi |  | 250 |
|------|--|-----|

Supplies

|                |  |     |
|----------------|--|-----|
| Misc. Supplies |  | 300 |
|----------------|--|-----|

Photocopying

|                                       |  |     |
|---------------------------------------|--|-----|
| Reports, drafts, Seminar papers, etc. |  | 500 |
|---------------------------------------|--|-----|

Communication

|                 |           |     |
|-----------------|-----------|-----|
| DHL             | 5 @ \$50  | 250 |
| Telex           | 10 @ \$30 | 300 |
| Telephone, Mail |           | 350 |

Data Processing Costs

|                     |  |     |
|---------------------|--|-----|
| Computer Time at UB |  | 250 |
| Software            |  | 800 |

**TOTAL**

- 6 - Save the file
- 7 - Print the file
- 8 - Return to DOS

## **Exercise 4 - Copying**

- 1 - Access Enable and retrieve test2.wpf
- 2 - Insert a line at the top of the file and type in the top left hand corner of the document:

### **Proposition 1**

- 3 - Set the entire document as a block and copy it underneath itself
- 4 - Call the second budget (the one you have just created),

### **Proposition 2**

- 5 - Use the Enable calculator to double all costs except Personnel and communication
- 6 - Calculate a new total
- 7 - Create a new file by opening a new window, call the new file test3.wpf
- 8 - Set the margins at 5 and 65
- 9 - Copy the proposition 2 budget to the new file
- 10 - Save the file test3.wpf and then print it
- 11 - Quit the file
- 12 - Save the file test2.wpf and then print it
- 13 - Quit Enable

## SPSS/PC+ REVIEW

### Introduction

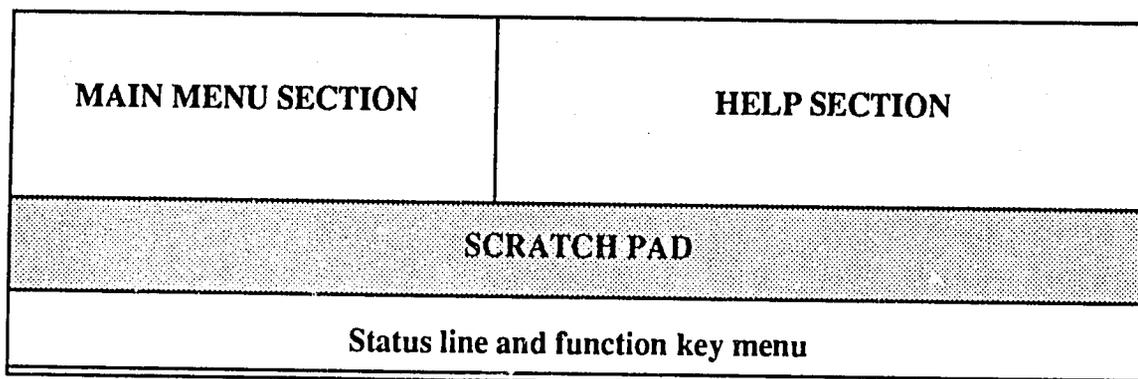

SPSS/PC+ is a program for the analysis of data gathered in social science research. SPSS stands for "Statistical Package for the Social Sciences." This section is not intended as a short course on the use of SPSS/PC+, but rather as an overview and reminder for those who have some knowledge of the package.

SPSS is a program originally developed for mainframe computers, and is based on a special language designed to ease the work of analysis, offer many options, and to use a series of consistent commands and procedures which are useful over many different analyses and studies. The current version designed for the PC maintains the features of the mainframe program, adding new features and adaptations to the PC.

SPSS/PC+™ Ver. 2.0 has three main components: (1) shell, (2) data entry and processing, and (3) analysis/reporting. The **shell** is what the user sees and uses to do the other tasks. It consists of menus and special key combinations to accomplish the tasks of the other two parts. The **data entry and processing** section has programs to help key the data into the computer files, check and clean the data, rearrange the data, and change it where desired. The **analysis** section contains programs for answering analytical questions about the data (such as, "What is the average age of the employees in each agency?," "Is there a relationship between the years of service and salary of an employee?," etc.). There is also a section for translating data files to be read into SPSS/PC+™ Ver. 2.0 from other programs or moved from SPSS/PC+™ Ver. 2.0 to other programs. Results of analyses and reports may also be moved into most word processing programs.

### Using the Program

The shell presents information in **windows**. A window is a portion of the contents of the computer's memory (RAM) which is displayed on the screen. SPSS/PC+™ Ver. 2.0 uses two windows, with one of the windows divided into two sections. When the SPSS/PC+™ program begins, it normally starts in REVIEW mode, with the Main Menu and windows displayed. The screen is divided into three sections roughly as shown here:

- The top window, in the top half of the screen, contains the menus and related information.

- The bottom window, in the bottom half of the screen, contains the work in progress and/or the results; it is called the SCRATCH PAD.

- The status line/function key menu displays information about the current task or choices available when function keys are pressed; for example, when the F1 Help key is pressed, the Help options appear on the bottom line menu.

- The top window may be made smaller to allow more of the current work in progress to show and be worked on, or the menu window (top half) may be turned off (Alt/M key combination).

The user may do desired tasks by making choices from the menus. Choosing a command from the menu writes that command into the SCRATCH PAD; choosing options from commands writes the options into the SCRATCH PAD also, in the correct order for the SPSS/PC+ program to execute.

Running the program is therefore a matter of:

1. Using the menus to find the desired command.
2. Pasting the desired command into the SCRATCH PAD by choosing the option from the menu.
3. Executing the commands from the SCRATCH PAD by pressing F10

and ENTER to run the commands from the cursor down.

4. Viewing the results on the screen, and modifying or adding to the commands as desired.

Move through the menus by highlighting the choice and hitting the < > ([ENTER]) key. Proceed through the levels until the desired choice is found. You may move backward through the menu structure with the Esc key.

5. The results of the choices are displayed in the bottom window or SCRATCH PAD.

The user (you) causes SPSS/PC+™ Ver. 2.0 to do the desired work by having the program execute commands in a special coded language. These written commands are referred to as the “code” which the computer understands. This code is a special language which the user must learn in order to use SPSS/PC+™ Ver. 2.0.

The **Shell** helps the user to choose and write the correct code by using the menus.

There are four general kinds of code, or SPSS/PC+™ Ver. 2.0 commands. Each code has a title, which simply tells the person reading the code what it is about. The title section of the code does not do anything besides give a heading to the file.

- The data definition and identification code. These commands tell the program where to find the data, what the data mean, and how they are to be labelled in any printing of results.
- The data processing, reorganizing, changing codes or commands. These commands tell the program how to order the data, divide it into sections, change or recode values, or produce lists and records of the contents of the data.
- The analysis commands. These commands tell the program what analyses you want done, cause the analysis to be performed and results to be printed and/or shown on the screen. The analysis commands include many options about the way the analyses are to be performed, how the results are to be presented, and other details of reporting. The options for each analysis differ and will be discussed in detail in the section on each analysis command.

- The session control commands are special commands which determine the various options on the particular PC in use and peripherals such as printers, display, etc.

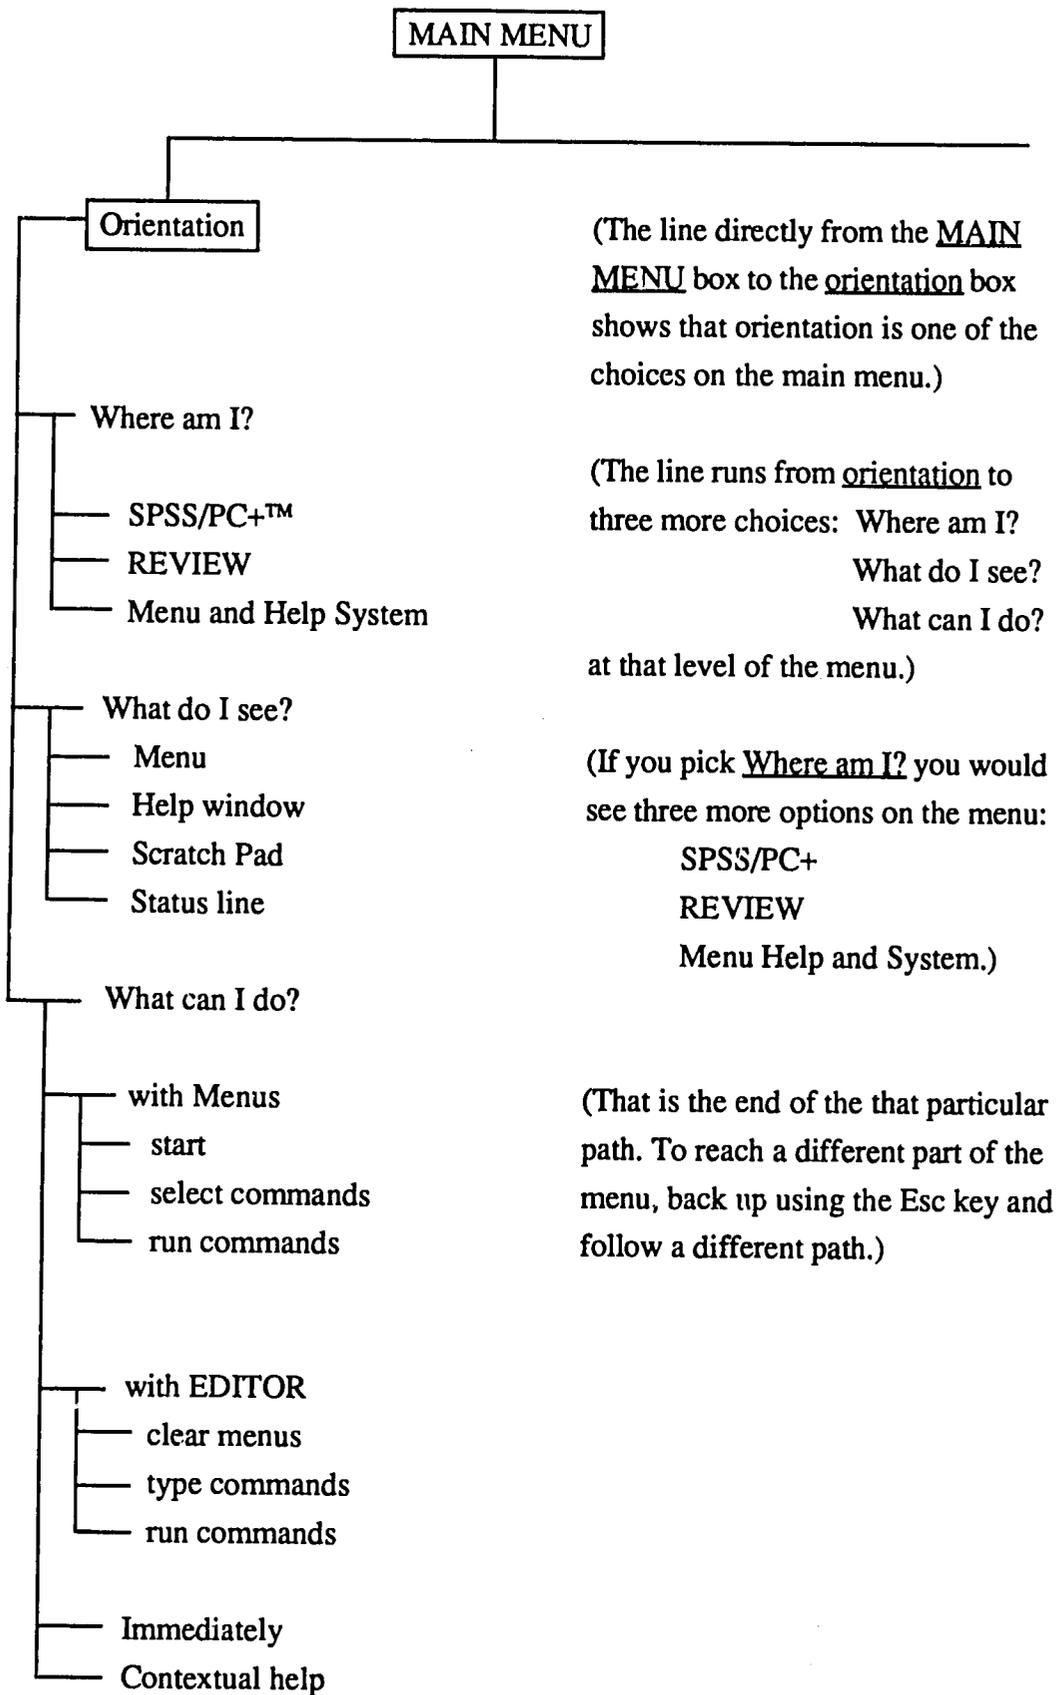

### *Menu System*

SPSS/PC+ provides a system of menus to help you perform all the program tasks. You may also use what we will call Command Mode to execute SPSS/PC+ commands directly without using the menus. Using Command Mode is somewhat faster for someone who is thoroughly familiar with the program and commands. For the beginner, however, it is usually better to use the menus.

The SPSS/PC+ program normally begins in REVIEW mode, with the main menu displayed. To move into Command Mode you press **F10** and choose the Exit to Prompt option. From that choice, the program displays the SPSS/PC+ prompt and simply waits for a command. To use the menus, you choose one of the options from the main menu and proceed.

In order to use the menus effectively, you must become familiar with the arrangement of options available and how to use them. The menu maps below show the arrangement of options in a kind of map. The lines on the map show what options are available at any particular point in the menus, and how to move from that point to any other part of the menus.

For example, examine the part of the menu map below:

(The line directly from the MAIN MENU box to the orientation box shows that orientation is one of the choices on the main menu.)

(The line runs from orientation to three more choices: Where am I? What do I see? What can I do? at that level of the menu.)

(If you pick Where am I? you would see three more options on the menu:  
 SPSS/PC+  
 REVIEW  
 Menu Help and System.)

(That is the end of the that particular path. To reach a different part of the menu, back up using the Esc key and follow a different path.)

In this way the map shows you the series of menu choices you must make to reach any particular part of the menu and execute any part of the program. To view the part of the orientation dealing with REVIEW, you would proceed as follows:

1. From the MAIN MENU, choose Orientation.
2. From the orientation menu, choose Where am I?
3. From the Where am I? menu, choose REVIEW.

### *Data and Data Entry*

There are essentially three distinct types of data which one encounters in social science research. The first type is numeric data. **Numeric data** is not any data that has a number or numbers involved with it. Our definition of numeric data is restricted to that data which are in either integer, decimal, or scientific notation in which the number has a true meaning. The second type of data is known as string (or text) data. This type is simply data which are consisting of words, phrases, and so on. The final type of data we group into a category called **special**. These data are phone numbers, dates, currency, etc. These data, although often consisting of numbers, the numbers may or may not have relevance in and of themselves as an interval scale. (For example, a phone number of 02-34581 is not a greater phone number than a phone number of 02-14431.)

It is important to make clear the distinction between variable definition and measurement. A variable definition is a choice of some observable characteristic of a thing (person, event, object, etc.) which stands for a concept. A measurement is making and recording an observation on one or more of the the unit(s) of observation chosen. The unit of observation is the thing (entity, object, person, event, activity, etc.) which is the focus of attention in an observation. It is defined by the researcher/analyst.

The unit of analysis is the thing (as above) about which the research questions are formed and is the focus of attention in the analysis. The unit of observation and unit of analysis are often the same, but this is not necessarily so (for example: activities v. jobs v. offices v. departments).

SPSS/PC+™ Ver. 2.0 defines the unit of observation and/or analysis as a **case**. The unit of observation in the Pilot Study is the individual employee. Therefore the case is the

collection of information about each individual. There are 1801 cases in the file.

The file consists of all the cases which contain the same kinds of information about the unit of observation (in this study, the employee). There may be more than one file in a study, depending on how the analyst wants to organize the data.

### *Defining Data in SPSS/PC+*

Example from the Data Dictionary for Pilot Study:

|                            |                              |
|----------------------------|------------------------------|
| Variable: Y1               | Label: NAME OF WORK PLACE    |
| Value labels follow        | Type: Number Width: 2 Dec: 0 |
|                            | Missing: 99.00               |
| 22.00 CUSTOMS AUTHORITY    | 27.00 TEXTILE FACTORY        |
| 42.00 MINISTRY-ROADS,BLDGS | 51.00 AL-THAWRA HOSPITAL     |
| 59.00 MINISTRY OF TRANSPOR | 77.00 CARE-MARTYRS FAMILY    |
| 99.00 ALL OTHER RECORDS    |                              |

The DATA LIST command is used to identify variable name, type, and width. The DATA LIST command follows this general structure:

```
DATA LIST [FILE='filename'] [FIXED] [TABLE] / varlist columns [{"(0)}"  
{"(n)"  
{"(A)"
```

How to read the symbols in a command specification:

[ ] square brackets contain optional parts of the command.

{ } braces show alternative entries or specifications; one of the alternatives must be entered to complete the specification correctly.

UPPER CASE (capital letters): part of the command that must be entered as shown.

lower case: information supplied by the user, which will probably differ for each variable or case.

For example:

DATA LIST FILE='c:\spss\pilot.dat' /index 1-5 y2 6-8 sex 9 (A).

Name of the file  
containing the data

The first variable name

Columns containing data for 1st variable

The second variable name

Columns containing data for 2nd variable

The third variable name

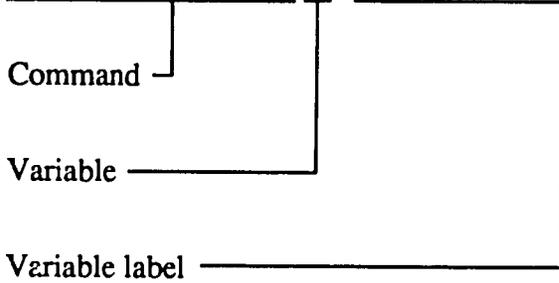

Column containing data for 3rd variable

Shows that this 3rd variable is alphabetic (string)

A number in parentheses following the column location is used to indicate the implied number of digits to the right of the decimal for numeric data. A value of 0 is the default (program-supplied value if none is specified). A decimal point in the data overrides the specification in the DATA LIST command.

Identifying variable labels and values is done in a similar manner, using the VARIABLE LABELS command. This attaches a string to the output (generated when the program runs) which describes the short variable name used for the SPSS program in a more thorough and meaningful manner. For example:

VARIABLE LABELS Y2 'Public Admin. Dept. or Bureau'.

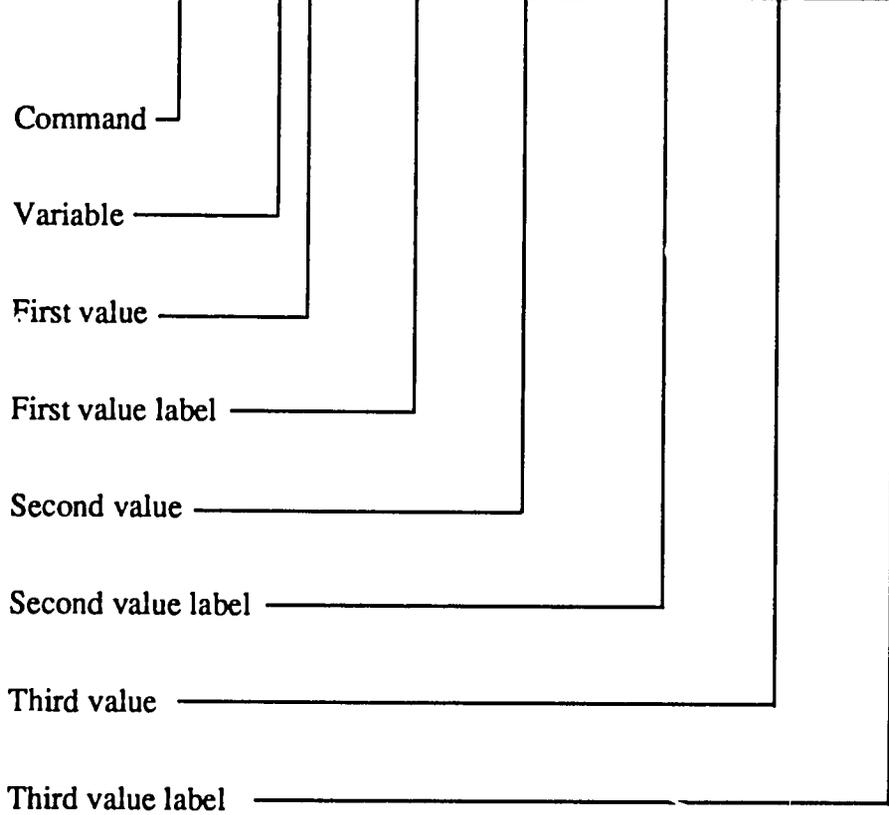

When the program runs, the string "Public Admin. Dept. or Bureau" will be printed whenever the Y2 variable is printed.

Similarly, the VALUE LABELS Command is used to add a string to the printed output for each specified value of the variable or variables desired.

Example:

VALUE LABELS y2 0 'No Subcode' 85 'Cust-Supervis' 87 'Cust-Admin'.

This structure continues for as many values as are needed for this variable. A “/” is used to separate variables. In the example above, for the value of “85,” the string “Cust-Supervis” will be printed whenever “85” is printed in conjunction with the variable, Y2.

**Exercise 1:** Write out the SPSS/PC+ Ver. 2.0 code for new DATA LIST, VARIABLE LABELS, and RECODE statements for two variables from the pilot study. Pilot study data and information are below.

**Exercise 2:** Write out an explanation of this statement:

DATA LIST FILE='data\survey1.dat' /name 1-30 (A) age 31-32 income 33-39 rate 40-44 (2) position 45-46.

#### Pilot Study Variable List

| Variable Name | Variable Label               | Variable Name | Variable Label               |
|---------------|------------------------------|---------------|------------------------------|
| Index         | - Index Number               | Y1            | - Name of Work Place         |
| Y2            | - Public Administration DE   | Y3            | - Original Ministry of Wor   |
| Y4            | - Employment Governate       | Y5            | - Sex                        |
| Y6            | - Age in Years               | Y7            | - Nationality                |
| Y8            | - Highest Level of Education | Y9            | - Year Highest Qualification |
| Y10           | - Area of Specialization     | Y11           | - Country of Study if Univ   |
| Y12           | - Length of Study in Years   | Y13           | - Attended Work Related Co   |
| Y14           | - Subject of Last Course # 1 | Y15           | - Subject of Last Course # 1 |
| Y16           | - Date of Last Course #1     | Y17           | - Date of Last Course #2     |
| Y18           | - Duration of Last Course    | Y19           | - Duration of Last Course    |
| Y20           | - Occupation Status          | Y21           | - Current Grade              |
| Y22           | - Occupation Grade           | Y23           | - Occupation Nature          |
| Y24           | - Year Entered Yemeni Gove   | Y25           | - Number of Years in Curre   |
| Y26           | - Basic Monthly Salary - Y   | Y27           | - Total Monthly Salary - Y   |

### *Defining and Entering Data*

The commands listed in the previous section (DATA LIST, VARIABLE LABELS, VALUE LABELS) are used when the data set to be used already exists in raw form. When building a new data set, the DATA ENTRY II section of the program should normally be used. DATA ENTRY II provides a fast and easy way to define the data dictionary, input the data, and clean the data set.

### *DATA ENTRY II Menus*

The DATA ENTRY II program consists of 6 parts or branches:

1. Dictionary branch for defining the names and characteristics of variables.
2. Forms branch for designing custom input forms.
3. Data branch for entering data.
4. Files branch for reading and writing files.
5. Cleaning branch for cleaning the data.
6. Skip and Fill branch for automating data entry.

When the D+ program starts, it displays the main menu which looks like this:

**DATA ENTRY II    Main Menu**

\_\_\_\_\_ **Current File** \_\_\_\_\_  
**<none>**

\_\_\_\_\_ **Main Menu** \_\_\_\_\_  
**!F1 Help    !F2 Files    !F3 Forms    !F4 Dictionary    !F5 Data**  
**!F6 Cleaning ! F7 Skip&Fill !F8 Options    !F9            !F0 Exit**  
\_\_\_\_\_ **Press !Function Key to Select** \_\_\_\_\_

\_\_\_\_\_ **Ctrl Menu** \_\_\_\_\_  
**^F1 Help        ^F2 Copy Text ^F3 CopyField ^F4 PasteText    ^F5 ShowText**  
**^F6 Blank Field ^F7 ReSearch ^F8 EditField ^F9 VarInfo    ^F0 Complete**  
\_\_\_\_\_ **Press ^Function Key to Select** \_\_\_\_\_

The top line of the menu shows the name of the system file that is currently active. When the program starts there is no active file (as in the example above). The center part of the menu shows the main branches, plus how to reach Help, Options, and Exit. You choose a branch of the main menu by holding down the SHIFT key (indicated by the !) and pressing the appropriate Function key. For example, SHIFT/F2 gets you to the FILE'S branch, etc. The lower part of the menu shows the CONTROL options. These are options for editing and working with screens in any of the branches. The CONTROL options are selected by holding down the Ctrl key (indicated by the ^) and pressing the appropriate Function key. For example, Ctrl/F2 copies text to the cursor position. The meaning of the CONTROL options is:

**^F1 - Displays help screens with explanations of the options.**

**^F2 - Copy text: The ^F2 key is used to mark out a block of text to be copied into a temporary storage place in memory (a buffer). The contents of the buffer can then be PASTED into some other position using the ^F4 key.**

To mark a block of text, move the cursor to the beginning of the block and press ^F2; a block of reverse video (light letters on a dark background) appears at the cursor. Then move the cursor to the end of the block; as you do so the reverse video marks the block. Press ^F2 at the end of the block, copying the text into the buffer for placement later.

**^F3 - Copy Field:** has the same effect as ^F2, except it works on an input or editing field. Place the cursor anywhere in the field and press ^F3 and the field will be copied into the buffer.

**^F4 - Paste Text:** copies the contents of the buffer onto the screen beginning at the position of the cursor.

**^F5 - Show Text:** displays the contents of the buffer in a small window on screen. The window is removed by hitting the SPACE bar.

**^F6 - Blank Field:** replaces the contents of the field at the cursor with blanks.

**^F7 - ReSearch:** searches for the same characters in a menu option that were searched for previously.

**^F8 - Edit Field:** allows editing of individual characters in a highlighted field. If you start typing new characters in a highlighted data field, the field will be blanked and the new characters will replace the old. If you press ^F8 first, a cursor appears in the field allowing you to move about and change any individual characters.

**^F9 - Var Info:** displays information about the variables in the active file.

**^F10 -Complete:** completes the activity or function in progress.

The Control Options are available in all Branches of Data Entry II.

### *DATA ENTRY II File set up*

The DATA ENTRY II section of the SPSS/PC+™ program can be used to define a new data set. This is the correct procedure to use to do this, with a few cases as examples.

1. From the SPSS/PC+ main menu choose **read and write files**.
  2. From the read and write files menu choose DE (for DATA ENTRY II). DE will then appear in the bottom window. Press **F10** to get the run from cursor option on the bottom line, then press **< >**. This will run the DATA ENTRY II program and present the DATA ENTRY II main menu.
  3. There are four main steps in creating a new data set using DATA ENTRY II:  
(a) create a new file, (b) create a dictionary containing the variable names, labels, and values, (c) enter the data, and (d) check and clean the data. The data may then be used directly in any desired analyses and also transferred to other programs for processing.
- 3 a. Choose **F2** from the Main menu to go to the FILES branch. This brings up the FILES menu which looks like this:

## FILES Branch Menu (F2)

### Main Menu

**!F1 Help    !F2 Files    !F3 Forms    !F4 Dictionary    !F5 Data**  
**!F6 Cleaning    !F7 Skip&Fill    !F8 Options    !F9    !F0 Exit**

Press !Function Key to Select

### Get/Save Files

|                    |    |     |                          |
|--------------------|----|-----|--------------------------|

Press ^Function Key to Select

From the DICTIONARY branch menu choose F2 (Define Variable.) Use the variable names, etc., from the table below to answer the prompts, or you may make up your own data set. After you have defined the first variable, just press F2 to define another, and so forth until the dictionary is complete.

| Variable Name | Variable Label        | Width Labels | Type | Value  |
|---------------|-----------------------|--------------|------|--|
| ID            | Identification No.    | 4            | n    |  |
| AGE           | Age in Years          | 2            | n    |  |
| TENURE        | Years in Current Pos. | 2            | n    |  |
| RATING        | Performance Rating    | 1            | n    | 1 Excellent<br>2 Very Good<br>3 Good<br>4 Poor<br>5 Unacceptable |
| COMMENT       | Rater's Comments      | 50           | A    |  |

When the Dictionary is complete return to FILES branch by pressing F2 and then choose F3 (Save File) to save the new file with the completed dictionary.

### *Entering data*

DATA ENTRY II provides two ways to enter data: a spreadsheet format in which there is a blank sheet created with a row for each case and columns for the variables, or a custom-made form with a box for each variable. This discussion describes how to enter data into the spreadsheet. The description of creating a custom form is found below.

When in the Dictionary Branch Menu, move to the DATA branch by pressing !F5. The DATA branch menu will appear, which looks like this:

## DATA Branch Menu (F5)

### Main Menu

**!F1 Help      !F2 Files      !F3 Forms      !F4 Dictionary !F5 Data**  
**!F6 Cleaning !F7 Skip&Fill !F8 Options !F9              !F0 Exit**

Press !Function Key to Select

### Enter/Edit Data

**^F6 Blank Field    ^F7 ReSearch    ^F8 EditField    ^F9 VarInfo    ^F0 Complete**

Press ^Function Key to Select

When DATA ENTRY II enters the DATA branch for a new file, it automatically creates a new blank spreadsheet, with the variable names at the top of each column, in the order they were defined. The first column is reserved for a case number, which is supplied automatically by the program as you enter data.

The DATA branch menu appears on top of the spreadsheet. To begin entering data, press the space bar to clear the menu and enter the first value for the first variable in case #1. When you press enter, the cursor will move to the next variable in that case, or from

the last variable in one case to the first variable of the next. Use the arrow keys to move to previous values to make any necessary changes. If you make a frequent or consistent error, the F5 key chooses the Search & Replace Value function, so that a change through many cases may be done in one step.

If you wish to have data checked for correct range or consistency with other variables, you may define Ranges and Rules (as described below) before entering the data. Whenever a correct Range or Rule has been defined for a variable, the program will check each entry and signal when an entry is invalid.

It is also possible to define SKIP & FILL rules (as described below). A SKIP & FILL rule provides for the program to skip to one or more variables and fill in their values depending on the value in some other variable. For example, suppose in an employment survey, there was a different subset of questions for respondents who worked for different agencies of government. A SKIP & FILL rule could be defined so that when the agency variable was entered, the program would skip to the appropriate questions for that agency and mark the questions for all other agencies as MISSING. If SKIP & FILL rules are to be used, they are defined before data entry.

### *Cleaning the Data*

The DATA CLEANING branch works by checking the data for values that are out of range—that is, the wrong value, too high, too low, etc. It also checks for combinations of values that are unlikely or impossible. The program does not change the data, however. It only marks cases as invalid according to the ranges or rules defined by the user. The program can print a list of all invalid cases or allow the user to scan through the cases, examining each invalid one in turn. The user then decides what the correct value should be and makes changes where desired.

To begin cleaning, press F6 to get to the CLEANING branch menu:

## CLEANING Branch Menu (F6)

### Main Menu

| ^F6 Blank Field | ^F7 ReSearch  | ^F8 EditField | ^F9 VarInfo   | ^F0 Complete |

Press ^Function Key to Select

Thus, there are three main steps in cleaning the data: (1) defining ranges and rules, (2) doing a cleaning pass on the data, and (3) scanning through the data to make desired changes. Doing a cleaning pass may also include printing a report of the invalid cases.

Defining or editing Ranges or Rules uses the same function keys. F2 defines either one; if you press F2 and the program prompts for a Range, you can switch to Rules with F10, or back to Ranges by pressing F10 again, and so forth.

Defining a range is accomplished by first choosing F2 from the DATA CLEANING

menu. The range values are written in the workspace using the operators thru and by. The following are all valid ranges for numeric variables:

20 thru 80 (marks as invalid any case whose value is less than 20 or over 80)

10 thru 50, 75 thru 100, 200 thru 500 (marks as invalid any case whose value is less than 10, between 50 and 75, between 100 and 200, or over 500)

0 thru 20 by 2 (marks as invalid any case whose value is an odd number, less than zero, or over 20; that is, only even numbers from 2 to 20 would be valid)

The entry of a range is completed by pressing ^F10.

For example, a survey of civil service employees should not have respondents 5 years of age, or who have worked for the agency for 87 years, or who have monthly incomes of over 20,000, etc. The analyst decides on what the correct ranges of values should be for the data and enters these as Ranges in DATA ENTRY II.

The analyst may also specify rules for data which make a case invalid or suspicious. For example, a person with a university level education would not be expected to hold a very low level job. Rules can be written to check for these unlikely combinations of values.

To write a Rule choose F2 from the DATA CLEANING menu. Then write the rule as a mathematical or logical expression using the operators shown in the upper window (see p. C-30 through C-32 in the DATA ENTRY II manual for an explanation of the operators and their use). For example:

AGE LE 12 IMPLIES STUDENT = 'T'

The rationale is that if a persons age is 12 or less, we would expect them to be a student. Therefore, for all cases where the variable AGE is less than or equal to (LE) 12, then the value of the variable STUDENT should equal T (for TRUE). If it doesn't, the case is marked invalid.

## 1988 - YREENTRY LE YRSERV

The respondent cannot have more years of service in a position (YRSERV) than the number of years from entry into service (YREENTRY) to the present (1988). They may have fewer years, due to interruptions, but cannot have more than from year of entry to the present.

To print a report press **F5** in the **CLEANING BRANCH** menu. The program will prompt you for more information. The program produces three kinds of reports in a cleaning pass:

- By Case - lists each invalid case in numerical order showing the range or rule violated.
- By Rule/Range - lists each rule or range violated with the number of each invalid case.

List Rules & Ranges - a list of the rules and ranges.

A report may be sent to a file on disk (to be printed later) or directly to the printer. If you wish the report to be printed immediately, type in **PRN** when prompted for a file name. **BE SURE THERE IS A PRINTER CONNECTED AND READY TO RUN IF YOU CHOOSE THIS OPTION.** If there is not, you may lose the entire SPSS session.

To practice the **DATA CLEANING** function, decide on three rules for the pilot study data and enter them into the data cleaning branch.

### *Custom Data Entry Forms*

The **FORMS BRANCH** allows the user to produce a custom form which will appear on the screen for data entry or editing in the **DATA BRANCH**. When using a form, data are entered or edited one case at a time on the screen. When using the spreadsheet, 20 cases can be viewed at one time. The use of form or spreadsheet does not affect the data, only the display. The form makes entry and editing easier in many applications because it allows for labels of variables and instructions on the screen. For example: a form for

entering name, age, and sex could look like this:

Please fill in the boxes below:

NAME: \_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_  
          last name                      first name                      initial

AGE: \_\_\_\_\_                      SEX: \_\_\_\_\_    m=male    f=female  
          years

The use of a standard form can speed data/information entry and reduce errors.

To create a form from main menu choose F3 for the Forms Branch and the FORMS branch menu appears:

## FORMS Branch Menu (F3)

### Main Menu

Press ^Function Key to Select

Begin to create a custom data entry ABC editing form by pressing **F2** (Generate Default Form). The form you design will then be the default form for this file and will be displayed whenever you call for it.

There are two parts of creating a form: (1) typing in the headings, labels, and instructions which show where the data fields are and what they contain, as well as editing or data-entry instructions to the person using the form; and (2) placement of the fields on the form, that is, marking the spaces where the data for each field will be entered or displayed. These steps can be done in any order. A typical sequence of steps in designing a form might be:

1. Create a drawing of the desired form on paper for reference.
2. Begin design by typing in the heading for the form.
3. Type in a label to show where the first field is located.
4. Choose F3 from the Forms menu to Place a Variable for the first field label just typed.
5. Move the cursor to the position for the first variable and press F3. Choose the variable to be placed from the menu that appears in the middle of the screen.
6. Press ^F10 to complete the process for that variable.
7. Repeat these steps for as many variables as desired.
8. Use the box drawing feature (F10) to draw a box around one or more variables or sections of the form if desired.

### SPSS File Types

There are seven types of files used in analysis and reporting with SPSS/PC+™. The table below lists each type of file, its contents and how it is used, the default file name, and how the file is written by the system or user. It is necessary to be fully familiar with these files and how to use them to make use of SPSS/PC+™.

Types of SPSS/PC+™ Files

| <u>Type</u> | <u>Contents &amp; Use</u>   | <u>Default Name</u> | <u>File</u>                     |
|-------------|---|---------------------|---------------------------------|
| scratch pad | commands pasted from the menu or typed from EDIT mode. Also contains the results of displays, but only the most recent version. | SCRATCH.PAD         | Replaced initialized on startup |

|                |   |              |                                    |
|----------------|---|--------------|------------------------------------|
| listing        | all output from commands and procedures when sent to the screen are also sent to this file. Holds error messages, tables, etc.                                    | SPSS.LIS     | initialized on startup             |
| log            | record of all command run, messages, location of output.  | SPSS.LOG     | initialized on startup             |
| system file    | all data, data dictionary, (including FORMS, RANGES, RULES, etc.) created in DATA ENTRY II.   | SPSS.SYS     | written by SAVE command only       |
| portable file  | contents of system file converted for transfer to some other machine/software. Created with the EXPORT command.   | (none)       | written by EXPORT command only     |
| results file   | results from particular commands and procedures. See list on p. A-16 of the SPSS/PC+ Base Manual.   | SPSS.FRC     | initialized on startup             |
| initialization | commands to initialize the SPSS/PC+ system according to your particular needs or preferences. See the options for the commands SET (p.C-179) and SHOW (p. C-192). | SPSSPROF.INI | written from EDITOR or DOS command |

**NOTE:** When a file is initialized by the system on startup, that means the previous contents of the file are erased. To save the contents of these files, they must be copied to another file name at the end of your SPSS/PC+ session or they will be lost.

### Practice Dataset Exercise

There is a practice data set at the end of this section. It has the same variables for all students, but different data. The coding for the variables is as follows:

| <u>Variable</u> | <u>Meaning</u>    | <u>Width</u> | <u>Type</u> | <u>Values</u>  |
|-----------------|-------------------|--------------|-------------|--|
| ID              | identification #  | 3            | numeric     |  |
| SEX             | sex of respondent | 1            | string      | m=male<br>f=female   |
| AGE             | age in years      | 2            | numeric     |  |
| POS             | position type     | 1            | numeric     | 1=Minister or Deputy<br>2=Department head<br>3=Bureau head<br>4=Professional staff<br>5=clerical staff<br>6=maint. &<br>operations |
| MOSAL           | monthly salary    | 6            | numeric     |  |
| AGENCY          | agency of work    | 1            | numeric     | 1=Finance<br>2=Civil<br>Service<br>3=Education<br>4=Transportation   |

1. Create an SPSS/PC+ system file for the data in your data set. The system file should contain the data dictionary and the data. Use DATA ENTRY II for this task.
2. Print a copy of the data dictionary.

3. RECODE the AGE and MOSAL variables into appropriate intervals.

4. Print a table of the frequencies for all variables.

5. Print a CROSSTABS table for:

- a. SEX BY MOSAL
- b. MOSAL BY AGENCY
- c. MOSAL BY POS

Each manual will have a copy of the original Pilot Study database in an SPSS/PC+™ System file (without the recoding of any variables). The exercises are to be done using this Pilot Study file. Be sure to keep a backup copy of your files on floppy disks in case files are erased or damaged on the hard drive.

## SPSS/PC+™ Exercises

In real life use, printed reports must be professionally presented. Therefore, it is important that the user of this manual take care to treat any printed output from these exercises as if it were to be used in a real situation and need. Use the SET command to be sure the results are printed with the proper margins and page breaks.

**Exercise 1:** The data for the pilot study must be cleaned. Use the DATA ENTRY II section of the program to clean variables Y1 through Y27. For your variables, decide what the appropriate RANGES and RULES should be. Print a report of the cleaning pass by RULE and a copy of the RULES and RANGES used.

**Exercise 2:** Use the COMPUTE command to create the following new variables:

QUALTIME - number of years since the person received his highest qualification; compute from Y9.

CRSTIME1 - number of years since the person took their last course #1; compute from Y16.

CRSTIME2 - number of years since the person took their last course #1; compute from Y17.

YEARSERV - number of years of government service; compute from Y24.

**Exercise 3:** Use the DESCRIPTIVES command to print the mean, median, and standard deviation of these variables: Y6, Y25, QUALTIME, CRSTIME1, CRSTIME2, YEARSERV.

**Exercise 4:** Use the WRITE /VARIABLES command to print the values for Y1, Y2, Y3, and Y4, for the first 20 cases.

**Exercise 5:** Do three CROSSTABS of your choosing and print the results showing the row percent, column percent, and table percent in each cell. Write a few

sentences on the print-out saying what you think the table shows about the data.

**Exercise 6:** Use DATA ENTRY II to change the value label in Y1 from Ministry of Roads to Ministry of Municipalities.

**Exercise 7:** Use the SELECT IF command to print separate CROSSSTABS of Y1 BY Y8 for Al Thawra, Customs Authority, and Ministry of Municipalities.

## A REVIEW OF BASIC STATISTICS

### *Definitions*

In order to acquire a basic introduction to the field of statistics, a few terms need to be defined. These terms will be used as we proceed with our discussions.

**population** - A set or collection of people, things, measurements, observations, etc., which are of interest. For example, the entire government work force in Yemen is one population. Another might be all registered voters in the United States. Usually populations are large, but there is no requirement that this be the case.

**sample** - Any subset of a population. For example, the people working in the Ministry of Education might be considered a sample of the population of government workers in Yemen while the registered voters in New York State would be a sample of all registered voters in the United States. Usually samples are much smaller than populations and normally samples are used when it is too expensive or unwieldy (too much time, too many in the population, etc.) to work with an entire population. Note, too, that one person's sample could be another person's population. The choice of sample and population is up to the researcher.

**parameter** - Any descriptive measure associated with a population. For example, the proportion of males in the Yemen government work force or the average age of voters in the United States. In statistics, parameters are usually denoted by Greek symbols.

**statistic** - Any descriptive measure associated with a sample. For example, the proportion of males in the Ministry of Education or the average age of voters in New York State. Statistics are denoted by regular alphabetic characters.

**variable** - A characteristic that can take on different values and is of interest to the researcher. For example, sex, age, salary, rank, etc. Variables are usually denoted as X or Y.

The whole process of statistics is one in which a population of interested is defined by the researcher who, because of certain constraints (such as time and money) draws from that population, at random, a sample. Statistics are then calculated on that sample and these statistics are used to infer the values of the population parameters.

**NOTE:** A random sample is a sample in which each member of the population has an equal chance of being included in the study.

### *Types of Data*

Different variables produce different types of data. Each type of data has its own properties and different statistical analyses require different types of data. (Likewise, the data you collect determine the statistical tests you may use.) The four types of data are: categorical (nominal), ordinal, interval, and ratio.

**Categorical** or nominal data are data that fall into categories. For example, sex is a categorical variable as it takes on the values of male and female. All that we can say about categorical data is whether two values are the same or different, or in other words, do two pieces of data fall into the same or different categories. Other examples of categorical variables would be occupation, region, race, etc.

**Ordinal** data are data that fall into ranks. With ordinal data we can place a piece of data on some continuum but we cannot say anything about the distance between pieces of data. An ordinal scale is one that tells us about order or rankings. For example, the results of a horse race is an ordinal scale. We know what horse came in first, which came in second, and which came in last. Another example is the Moh's scale for the hardness of rocks. In this case, rock A is ranked harder than rock B if rock A can scratch rock B. What we do not know from this scale is how much harder rock A is than rock B.

**Interval** data tell us order but we can also make statements about the distances between pieces of data. This is because equal distances on the scale mean equal differences on the variable being measured. A classic example is temperature in degrees Centigrade. The difference between 10° and 20° C is exactly the same as the difference between 40° and 50° C - 10 degrees. This was not the case in ordinal data. An interval scale does, however, lack a true zero point - a point which represents the complete lack of the variable being measured. In temperature, 0° C is merely the point at which water freezes. It

does not indicate the point at which there is no temperature. The choice of the zero point in an interval scale is completely arbitrary.

**Ratio** data, on the other hand, do have a true zero point in addition to all the other properties of interval data. The presence of a true zero point allows us to make statements about the ratios present in our data. For example, if one piece of wood is 1 meter long and another piece of wood is 2 meters long, we can say that the piece of wood 2 meters long is twice as long as the piece which measures 1 meter in length. Other examples of ratio data are weight, height, number of items correct on a test, etc.

### *Frequency Distributions*

When dealing with categorical data, one of the first questions to be answered is “How many people fall into a particular category?” To answer this question a frequency table needs to be constructed. Such a table summarizes very quickly the number of people in each category and allows the researcher to make comparative statements about the data. For example, which category has the most people, which has the least people, does category A have more people in it than category B, etc. The table, below, gives the frequency distribution for a sample of people who were asked their religion. (Note that this table is identical to that produced by SPSS/PC+.)

#### RELIGION

| Value Label | Value | Frequency  | Percent      | Valid Percent | Cum Percent |
|-------------|-------|------------|--------------|---------------|-------------|
| ISLAMIC     | 1     | 84         | 60.0         | 60.9          | 60.9        |
| CATHOLIC    | 2     | 34         | 24.3         | 24.6          | 85.5        |
| PROTESTANT  | 3     | 20         | 14.3         | 14.5          | 100.0       |
|             | .     | 2          | 1.4          | MISSING       | 100.0       |
|             | TOTAL | <u>140</u> | <u>100.0</u> | <u>100.0</u>  |             |

In this table we see that we had 84 members of the Islamic faith in our sample (which were coded as 1 in our data), 34 Catholics (coded 2), 20 Protestants (coded 3), and 2 people that did not tell us their religion. These raw frequencies translate to 60.0%, 24.3%, 14.3%, and 1.4%, respectively. The Valid Percent column recalculates the percentages with the missing cases removed, i.e., the percentages are based on a sample drops of 138 rather than 140 (the 2 missing people with missing data are removed). The Curn Percent column is just the sum of the Valid Percents — 60.9% of our sample is Islamic, 85.5% (60.9% + 24.6%) are either Islamic or Catholic, and 100.0% (60.9% + 24.6% + 14.5%) are either Islamic, Catholic, or Protestant.

**Exercise 1** - Using the TEACH.SYS file, produce frequency tables for the SEX and AGEGRP variables using SPSS/PC+. What percentage of the sample is male? How many people fall into the 31-40 age group?

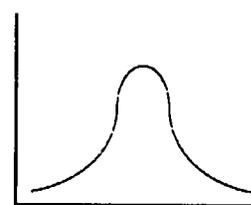

If frequency distributions are graphed, they sometimes show certain characteristics. If most of the scores fall at either the low end or the high end of the scale, the distribution is said to be skewed. If most of the scores lie at the low end, the distribution is said to be positively skewed while if most of the scores lie at the high end, the distribution is said to be negatively skewed. (The direction of the tail tells you the type of skew — if the tail points to the left, it is negatively skewed; if it points to the right, it is positively skewed.) If the distribution is shaped such that when a line is drawn down the middle, the two halves that are formed can be folded on top of one another, the distribution is said to be symmetric. The pictures below provide examples of these distribution shapes.

Negative Skew

Positive Skew

Symmetric

## *Measures of Central Tendency*

When dealing with either interval or ratio data, especially when the data extends over a wide range of values, using only a frequency table is insufficient to fully describe the data. There is just so much data present the researcher becomes lost in it. What is needed is some method by which a large amount of data can be reduced down to a few measures which provide the researcher with a picture of the data. Measures of central tendency provide just such measures. They are statistics that can be calculated from our sample and they provide us with information regarding the "average score" of our distribution. The one thing to remember is that there are many types of "averages." We will deal with only three of them but they are all measures of central tendency.

The easiest to calculate is the **mode**. The mode is simply the score that occurs the most frequently in our distribution. Given the following set of scores: 3, 4, 4, 9, 13; the mode would be 4. The mode is the only measure of central tendency that can be used with categorical data. In our RELIGION frequency table presented above, then, the mode would be Islamic as it is the category which contains the most people. Note that it is possible for a distribution to have more than one mode. For example, a distribution with two modes is called bimodal.

Another measure of central tendency is the **median**. The median is defined as the score at or below which 50% of the distribution lies. It can be thought of as the "middle score" of the distribution. When there is an odd number of cases in the sample, simply arrange the scores in order from smallest to largest and the median is the middle score. For example, in the set of scores 3, 4, 4, 9, 13, the median would be 4. When there is an even number of cases in the sample, the median is the average of the two middle scores. For example, in the set of scores 3, 4, 6, 8, the median would be  $[(4+6)/2]$  or 5.

The most well known of the measures of central tendency is the **mean**. It is what most people think of when they think of an average. It is just the sum of all the scores in a sample divided by the number of scores in a sample. In terms of a formula, the mean is defined as:

$$\bar{X} = \frac{\sum_{i=1}^n X_i}{n}$$

The  $\Sigma$  sign is the Greek letter *sigma* and it means "the sum of." It is just a statistical shorthand (abbreviation) that means add up all the scores which are designated (following the character). The  $X$  in the formula represents the score and the  $n$  represents the number of people (or whatever you are measuring) in the sample. When dealing with a population, the formula is:

$$\mu = \frac{\sum_{i=1}^n X_i}{N}$$

The  $\mu$  sign is the Greek letter *mu* and it represents the mean of a population. The  $N$  represents the number of people in the population. In the vast majority of cases you will not have a population so your attention will be on  $X$ , the mean of a sample.

If we use the following set of data as our sample: 3,4,4,9,13; the mean of this distribution would be calculated as follows:

$$\bar{X} = \frac{(3+4+4+9+13)}{5} = \frac{33}{5} = 6.6$$

**Exercise 2** - Calculate the mode, median, and mean of the following set of data:

11,11,12,12,12,12,12,13,13,14,14,15,15,15,16,16,16,16,16,16,17,  
17,18,18,19,20,20,21, 22,22

Note that the mean is the only measure of central tendency that takes into account every single case in the distribution. It can be thought of as the balance point of the distribution. This means that it is extremely susceptible to changes in the data. Adding a very large score to the distribution will cause the mean to increase while adding a very small score will cause the mean to decrease. For example, adding a score of 30 to our little 5 case sample causes the mean to increase to 10.5 [(3+4+4+9+13+30)/6].

If you know the three measures of central tendency, you also have a pretty good idea as to the shape of the distribution. If the mean is less than the median and the median is less than the mode, the distribution is negatively skewed. If the mean is greater than the median and the median is greater than the mode, the distribution is positively skewed. If the mean, the median, and the mode are the same score, the distribution is symmetric.

The most important thing to remember about measures of central tendency is that they are all scores. They can all be represented as points on the X-axis of a graph of the data.

**Exercise 3** - Measures of central tendency can easily be calculated by computer using the DESCRIPTIVES procedure in SPSS/PC+. Using this procedure with the TEACH.SYS file, find the descriptive statistics for the variables AGE, Q1, and Q2.

Note that the DESCRIPTIVES procedure provides the user with a variety of statistics. The skewness statistic indicates the degree of skewness present in the distribution—if the statistic is negative, the distribution is negatively skewed while if it is positive, the distribution is positively skewed. If it has a value of zero, the distribution is symmetric. The kurtosis statistic tells us how peaked the distribution is. If the statistic has a negative value, the distribution has a relatively flat top. If the value is positive, the distribution has a sharp peak to it. And if the distribution looks like a normal (or bell shaped) curve, the statistic will have a value very close to zero.

### *Measures of Variability*

Just knowing the “average” score of a distribution is not enough to fully describe a set of data. One must also have some idea about the amount of “spread” in the data. How similar are the scores? Are the scores all clustered around the mean or are they spread out across a wide range? Measures of variability allow us to quantify the amount of dispersion present in the data.

The simplest measure of variability is the **range**. The range is nothing more than the distance between the largest score and the smallest score:

$$\text{range} = \text{largest score} - \text{smallest score}$$

The range is very easy to calculate, but it is only based on two pieces of data. A more useful measure would be one that, like the mean, takes into account every score in the distribution.

One such measure is the **variance**. The variance measures the degree to which scores cluster around, or deviate from, the mean. The formula for the variance is as follows:

$$S^2 = \frac{\sum_{i=1}^n (X_i - \bar{X})^2}{n} = \frac{\sum X^2}{n} - \bar{X}^2$$

(The second of the formulas given is called the computational formula. It is easier to use when calculating the variance than the first one.)

As you can see, the variance involves taking the difference between every score and the mean:

$$(X - \bar{X})^2$$

The difference is squared because if you sum the differences without first squaring them, the sum is equal to zero. (This is because the mean is the balance point of the distribution.) Squaring the differences takes care of this problem. The variance can be thought of as the mean squared deviation from the mean. It can take on any value from zero to positive infinity. If the value is zero, it means that every person in the distribution had exactly the same score — hence, no variation. Note that the variance can never be negative. If it is, you have made a mistake in your calculations.

If we take our 5 case sample as an example, the variance would be calculated as follows:

$$\begin{aligned} S^2 &= \frac{(3^2 + 4^2 + 4^2 + 9^2 + 13^2)}{5} - 6.6^2 \\ &= \frac{291}{5} - 43.56 = 58.2 - 43.56 = 14.64 \end{aligned}$$

**Exercise 4** - Using the data from Exercise 3, calculate the variance of the scores.

The only problem with the variance is that it is a squared measure. It is not in the same units as the original data. To make the measure a bit more useful, the square root of the

variance is employed. This measure of variability is called the **standard deviation** (denoted as "s".) In other words, the standard deviation is nothing more than the square root of the variance. After taking the square root, the measure is now on the same scale as the original data. This allows us to say that score A lies 1 standard deviation above the mean while score B lies 1.5 standard deviations below the mean. For our 5 case example, then, the standard deviation is:

$$s = \sqrt{s^2} = \sqrt{14.64} = 3.8262$$

Note, then, to calculate the standard deviation, one must first calculate the variance.

Just like the variance, the standard deviation can be no smaller than zero, where zero would indicate no variation. The upper limit of the standard deviation is one-half of the range (range/2). This upper limit will only occur if exactly half of the distribution received the smallest score and the other half received the largest score.

**Exercise 5** - Using the data in Exercise 3, calculate the standard deviation of the distribution.

**Exercise 6** - As was the case for measures of central tendency, the DESCRIPTIVES procedure in SPSS/PC+ can be employed to calculate the measures of variability for a set of data. Using the TEACH.SYS file, find the range, variance, and standard deviation for the variables Q7, Q8, and Q9.

### *Crosstabulation*

Very often a researcher is interested in the relationship between two categorical variables. In survey work it is often useful to investigate whether responses to one item are related to responses on a second item. For example, is the sex of a respondent related to their educational level? This question can be answered through the use of cross-tabulations or contingency tables.

|                |           | Sex  |        | Total |             |
|----------------|-----------|------|--------|-------|-------------|
|                |           | Male | Female |       |             |
| Educ.<br>Level | Secondary | 100  | 100    | 200   |             |
|                | Bachelors | 80   | 70     | 150   |             |
|                | Masters   | 40   | 60     | 100   |             |
|                | Doctorate | 30   | 20     | 50    |             |
|                |           | 250  | 250    | 500   | Grand Total |

In the above table we are relating the sex of the subject to the subject's educational level. Each cell of the table contains a frequency so we know, for example, that 80 of the male subjects have a Bachelor's degree. The numbers at the end of each row and column are called the marginals. They indicate the total number of subjects in each row and column. The number in the lower right corner (500) is the total number of subjects in the table.

The question to be answered here is "Are the two variables being examined, sex and educational level, independent of each other or are they related in some fashion?" To say it another way, "Are the frequencies observed across categories in one variable the same for all categories of the second variable?" In the case of our example, "Are the frequencies observed for males across the educational levels the same as those observed for females?"

The statistic used to answer this question is a chi-square ( $\chi^2$ ). A  $\chi^2$  statistic allows us to test the independence of two categorical variables. The formula is as follows:

$$\chi^2 = \sum \frac{(O_{ij} - E_{ij})^2}{E_{ij}}$$

where:  $O_{ij}$  = observed frequency for cell  $ij$  and

The expected frequency is the number of people we would expect to find in a cell if the two variables are independent of one another. It is calculated as follows:

$$E_{ij} = \frac{(\text{row } i \text{ total})(\text{column } j \text{ total})}{n}$$

where:  $n$  = number of people in table

If the observed and expected frequencies are close to one another, we have independence. If they are very different, it indicates the variables are related.

The expected frequency for the Secondary-Males cell, the 1-1 cell would then be:

$$E_{ij} = \frac{(200)(250)}{500} = 100$$

**Exercise 7 - Calculate  $E_{12}$  (Secondary-Female) and  $E_{31}$  (Masters-Male).**

Once the expected frequencies have been calculated, the statistic can be readily calculated:

$$\begin{aligned} &= \frac{(100 - 100)^2}{100} + \frac{(100 - 100)^2}{100} + \frac{(80 - 75)^2}{75} + \frac{(70 - 75)^2}{75} \\ &+ \frac{(40 - 50)^2}{50} + \frac{(60 - 50)^2}{50} + \frac{(30 - 25)^2}{25} + \frac{(20 - 25)^2}{25} \\ &= 6.667 \end{aligned}$$

The degrees of freedom (df) for a chi-square statistic are  $(r-1)(c-1)$  where  $r$  equals the number of rows in the table and  $c$  equals the number of columns. For our example, then,

$df = (4-1)(2-1) = (3)(1) = 3$ . (A degree of freedom is the number of observations free to vary with the restrictions of a given dataset. That is, for a set of four data, the first three you pick can be any of the four; the fourth is not free to vary, as it is "chosen" by the other three. Therefore, in this sample dataset of four cases, the number of degrees of freedom equals three. In the chi-square statistic, the data are free to vary by column and by row.)

To say that the two variables are related, the  $\chi^2$  you calculate must be as large as or larger than a specific **critical value** which is obtained from a chi-square table and is dependent on the df for your table and the level of statistical significance you have chosen (usually .05). In our example, with  $df = 3$  and a significance level of .05, the critical value is 7.82. Therefore, as 6.667 is less than 7.82, we would conclude that there is no relationship between sex and educational level.

**Exercise 8** - Given the table below, determine row, column, and grand totals, then calculate a  $\chi^2$ . Are variables A and B related?

|            |            |    |     |
|------------|------------|----|-----|
|            | Variable B |    |     |
|            | 10         | 30 | 40  |
| Variable A | 5          | 20 | 25  |
|            | 25         | 10 | 35  |
|            | 40         | 60 | 100 |

The SPSS/PC+ CROSSTABS procedure can be used to calculate a chi-square for a contingency table. For the table in Exercise 2, the command would be as follows:

CROSSTABS TABLES=VARA BY VARB/STATISTICS 1.

The first variables specified becomes the row variable and the second the column variable. Statistics 1 indicates that a chi-square should be calculated. SPSS/PC+ does not tell

you the critical value, instead it tells you the exact probability associated with the chi-square for the table. If this probability is equal to or less than the significance level you have chosen (.05, for example), the chi-square is significant and the two variables are related.

It is often useful to request three of the options associated with the CROSSTABS procedure in SPSS/PC+. Options 3,4, and 5, produce row, column, and total percentages, respectively, for each cell in the table. Sometimes it is easier to understand the results of the chi-square test by looking at these percentages than it is to look just at the frequencies. Rewriting the SPSS/PC+ command shown above with this in mind, we get

```
CROSSTABS TABLES=VARA BY VARB/OPTIONS 3 4 5/STATISTICS 1.
```

**Exercise 9** - Using the TEACH.SYS file, do a CROSSTABS do see if the SEX and AGEGRP variables are related. Use both the OPTIONS and STATISTICS commands.

If you examine the output from Exercise 3, you will see that the chi-square for the table constructed is 4.826 with 4 degrees of freedom. There is a column marked "Significance." This column gives the probability (chance) that one could obtain the reported chi-square if the two variables under investigation were, indeed, independent of each other, given the indicated degrees of freedom. In other words, there is a probability of 30.56% that a chi-square of 4.826 with 4 degrees of freedom could have resulted from chance if SEX and AGEGRP were truly unrelated to each other. The question now becomes "Is this probability small enough for us to conclude that it could not have occurred if the two variables were unrelated, but rather, could only have occurred if the two variables were related?" Convention in the social sciences is to say that if the probability is .05 (5%) or less, then we conclude that the two variables are related. In other words, we say that the calculated chi-square is statistically significant at the .05 level of significance. This means that there is less than 5 chances in 100 that we will say the two variables are related, when, in truth, they are not.

One should also look at the column labeled "Cells with E.F.< 5." The E.F. stands for Expected Frequency and if too many of the cells in the table have expected frequencies less than 5, the chi-square statistic is no longer reliable. A good "rule of thumb" is that if more than 20% of the cells have expected frequencies less than 5, the chi-square statistic should not be trusted. One way to get around this problem is to reduce the number of cells in the table by combining some of the categories in one or both of the variables and recompute the chi-square using this new table.

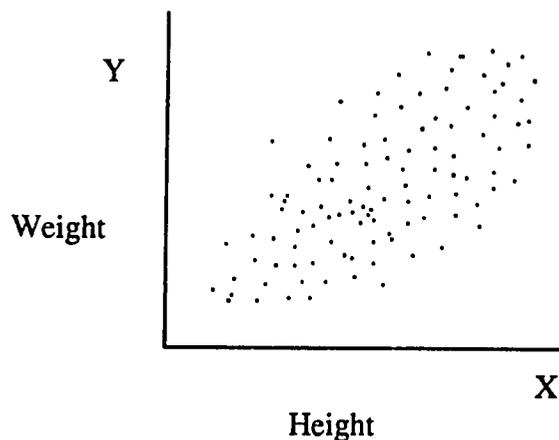

If the chi-square turns out to be significant, one must then examine the table in an attempt to figure out what is leading to this significance. This is done by examining the row

or column percentages (which are calculated by using **OPTIONS 3** and **4** in SPSS/PC+) in each cell. If the chi-square is nonsignificant, it means that as we go across the columns, the row percentages remain very similar as we go from one row to the next. Or, if you prefer, as we go down the rows, the column percentages remain very similar as we go from one column to the next. For example, in the SEX by AGEGRP table produced in Exercise 9 the chi-square statistics was nonsignificant. If you look at the column percentages for the first column they are 25.0 for the first row (Males) and 75.0 for the second row (Females). A similar pattern is observed in the second column (21.9 vs 78.1), the third column (28.9 vs 71.1), and the fifth column (25.0 vs 75.0). The fourth column is the only one that doesn't follow this pattern (50.0 vs 50.0) and even this difference is not enough to cause the chi-square to be significant. The more discrepant these percentages become, the larger the chi-square will become until, at some point, the discrepancies will become so great the chi-square will attain statistical significance.

### *Correlation*

In the previous section we discussed the chi-square statistic and how it could be used to test to see if two categorical variables were related to one another. A similar statistic exists for continuous variables. Correlation allows us to investigate the direction and strength of the relationship between two continuous variables. We shall confine our attention to one type of correlation coefficient, the **Pearson Product-Moment correlation coefficient**.

The Pearson Product-Moment correlation coefficient (denoted as  $r$ ) assesses the direction and strength and direction of the linear relationship between two variables. Say, for example, we wish to discover whether for a sample of adult Yemeni males, height in centimeters ( $X$ ) is related to weight in kilograms ( $Y$ ). Each person in the sample, then, has a height and a weight. If we graph these data points, we will produce what is called a **scatterplot** and it will look something like this:

If we draw an ellipse around these points, we will be able to say something about the direction and magnitude of the relationship between height and weight. If, by looking left to right, the ellipse goes from lower left to upper right (as is the case in the above example), the relationship is said to be a positive or direct relationship — as one variable increases, the other increases; as one variable decreases, the other decreases. If, on the other hand, the ellipse goes from upper left to lower right, the relationship is said to be negative or inverse. If the ellipse is very thin, the relationship between the two variables is strong. If the ellipse becomes a straight line, the relationship is said to be perfect and is the strongest it can be. If, however, the ellipse is thick, the relationship is a weak one and if the ellipse becomes a circle, no linear relationship exists between the two variables.

The Pearson Product-Moment Correlation Coefficient quantifies the direction and strength of the (linear) relationship. It varies between -1.0 and +1.0 with either -1.0 or +1.0 signifying a perfect relationship and 0.0 signifying no relationship. It is calculated as follows:

$$r_{xy} = \frac{\frac{\sum (X_i * Y_j)}{n} - (\bar{X} * \bar{Y})}{s_x * s_y}$$

Let us take the following set of height and weight data with X representing the height and Y representing the weight. In order to calculate the correlation, we need the means for X and Y, the standard deviation for X and Y, and the sum of the XY's, which is called "the sum of the cross products."

|   |     |     |     |     |     |
|---|-----|-----|-----|-----|-----|
| X | 176 | 140 | 196 | 150 | 180 |
|   |     |     |     |     |     |
| Y | 61  | 50  | 82  | 55  | 60  |

$$XY = (176)(61) + (140)(50) + (196)(82) + (150)(55) + (180)(60) = 52858$$

$$r_{xy} = \frac{\frac{52858}{5} - (168.4)(61.6)}{(20.49)(10.93)} = \frac{10571.6 - 10373.44}{223.9557}$$

$$= +0.88$$

The correlation between height and weight for our sample of adult Yemeni males, then, is +0.88, which indicates a strong, positive linear relationship between the two variables.

**Exercise 10** - Find the correlation between X and Y for the following set of data:

|   |    |    |    |    |    |    |    |    |
|---|----|----|----|----|----|----|----|----|
| X | 20 | 30 | 23 | 27 | 23 | 15 | 30 | 20 |
| Y | 13 | 27 | 22 | 23 | 24 | 17 | 29 | 20 |

**Exercise 11** - The Pearson correlation can easily be calculated using the CORRELATION procedure in SPSS/PC+. Using the TEACH.SYS file, find the correlation between AGE and Q1 (Request OPTIONS 5 and STATISTICS 1 as well).

Choosing OPTIONS 5 causes SPSS/PC+ to print two additional pieces of information besides the requested correlation. The number enclosed within parentheses is the number of cases on which the correlation is based. The "P=" portion refers to the probability of obtaining that particular correlation coefficient if the "true" correlation between the two variables is equal to zero. In other words, it is the probability of obtaining that correlation coefficient by chance alone assuming the two variables are really uncorrelated with each other. As was the case for the chi-square statistic we discussed above, if this probability is less than or equal to 0.05, we conclude that the reported correlation is significantly different from zero. Or to put it another way, we conclude that the two variables are, indeed, correlated with each other.

It is important to note that just because a correlation is close to zero, it does not mean the two variables are not related to each other. Remember, the Pearson Product-Moment correlation measures the degree of linear relationship between two variables. If the variables are related in a nonlinear or curvilinear fashion, the Pearson correlation will be close to zero. For example, performance on a test and anxiety level are related to each other. As anxiety level increases, subjects tend to do better on the test (perhaps a little anxiety prods them to study more and to pay closer attention to their work). However, once anxiety level reaches a certain threshold, it becomes counterproductive. It begins to interfere with performance and test scores go down. This is not a straight line or linear relationship, rather the graph looks something like an upside down letter "U," indicating

a curvilinear relationship between test score and anxiety. One must be careful about interpreting correlation coefficients without first examining the scatterplots.

Examining the scatterplots also allows a researcher to detect the presence of outliers. Outliers are data points that fall outside the range of the majority of the data. Outliers can have a profound impact on the Pearson correlation. It is possible that the presence of a few outliers will cause two variables that appear for the most part to be unrelated to have a correlation coefficient that is significantly different from zero. The reverse can also occur where two variables that are highly related can appear to be almost totally unrelated due to the presence of only a small number of outliers.

## LOTUS EXERCISES

1. Exercise 1: Making a Table .....L-2
2. Exercise 2: Modifying a Table and Deriving a Percentage .....L-4
3. Exercise 3: Inserting and Deleting .....L-7
4. Exercise 4: Additional Modification Practice .....L-11
5. Exercise 5: Adding a Column.....L-14

## LOTUS EXERCISES

These exercises are designed to be used along with a Lotus 1•2•3™ manual. This section is only a summary introduction, via exercises, to Lotus™.

### Exercise 1

In this exercise you are required to start making part of Table 1 using the Lotus™ spreadsheet by following these steps:

**NOTE:** Throughout these exercises, the symbols < > will be used as a short form of [Enter], as they are in the rest of the manual.

#### Steps:

- 1 - To get access to the spreadsheet,
  - type: **123**
- 2 - Move the cell pointer (CP) to cell d2 and type: **Table (1)** and press: < >
- 3 - Move the CP to cell a4 and type the heading of the Table and press: < >
- 4 - Move the CP to cell a7 and type: **Code** and press: < >
- 5 - Move the CP to cell b7 and type: **Occupation** and press: < >
- 6 - Move the CP to cell d7 and type: **Yemeni** and press: < >
- 7 - Move the CP to cell e7 and type: **non-Yemeni** and press: < >
- 8 - Move the CP to cell f7 and type: **Total** and press: < >
- 9 - Move the CP to cell g7 and type: **% non-Yem** and press: < >
- 10 - Follow steps 4 to 7 with the appropriate CP change to enter the code, occupation, number of Yemenis, and number of non-Yemenis starting from line 9, so the table will look like the following:

Table 1  
Public Sector Employment by Nationality and Occupation in 1986

| Code | Occupation          | Yemeni | non-Yemeni | Total | % non-Yem |
|------|---------------------|--------|------------|-------|-----------|
| 010  | Phys Sci & rel      | 146    | 26         |       |           |
| 020  | Engi & Archit       | 578    | 165        |       |           |
| 050  | Life Scient         | 152    | 43         |       |           |
| 060  | Doctors & Pharm     | 935    | 885        |       |           |
| 080  | Stat, Math, Comp    | 113    | 9          |       |           |
| 090  | Economists          | 353    | 5          |       |           |
| 110  | Accountants         | 1903   | 100        |       |           |
| 120  | Lawyers, Judges     | 797    | 10         |       |           |
| 130  | Teachers (Inter,Se) | 5400   | 6770       |       |           |
| 140  | Workers in Religion | 845    | 85         |       |           |
| 150  | Authors, Journ      | 230    | 1          |       |           |
| 190  | Social Workers      | 316    | 20         |       |           |
| 199  | Other Professions   | 872    | 40         |       |           |
|      | Total Prof. Occ     |        |            |       |           |

11 - To save your table on the disk in the A drive,

- press: / File Save < >
- press: Esc

12 - Give the table a name,

- type: A:table1 < >

13 - To exit from Lotus™:

- press: / to get to the menu
- choose Quit by pressing Q

Lotus™ will ask you if you have saved your work, and since you did in step 12:

•press: Y

## Exercise 2

In this exercise you are required to use Lotus™ to add the total of Yemeni and non-Yemeni workers in Table 1 and derive the percentage of the Yemenis to the row total by following these steps:

Steps:

- 1 - To get access to the spreadsheet:
  - type: **123**
  
- 2 - To retrieve your table,
  - press: **/** to get to the menu
  - choose **File** by pressing **F**
  - choose **Retrieve** by pressing **R**
  - press: **Esc**
  - now type: **A:table1.wk1**
  
- 3 - To get the total for the first occupation, move the CP to cell f9 under the word **Total** and type this formula:
  - **d9+e9** and press: **< >**
  
- 4 - To get the total for the following occupation you can copy the formula of the first occupation:
  - move CP to cell f9
  - press: **/** to get to the menu
  - choose **Copy** by pressing **C, < >**
  - move the CP to cell f10, **< >**
  
- 5 - Follow step 3 to obtain the totals of the other occupations with the appropriate changes in cell numbers.
  
- 6 - To get the total for the Yemeni workers in the first column, move the CP to cell d22 at the end of the column and type this formula:
  - **@sum(d9.d21)** and press: **< >**

- 7 - To get the total for the non-Yemenis you can copy the formula of the the first column,
- move the CP to cell f9
  - press: / to get to the menu
  - choose Copy by pressing C, < >
  - move the CP to cell f10, < >
- 8 - Follow step 7 to obtain the total of the other column with the appropriate changes in cell numbers.
- 9 - To get the percentage of non-Yemeni workers to the total for the first occupation, move the CP to cell g9 under the column heading % non-Yem and type this formula:  
 $+e9/f9*100$  and press: < >
- 10 - To get the percentage of the following occupation you can copy the formula of the first occupation:
- move the CP to cell g9
  - press: / to get to the menu
  - choose Copy by pressing C, < >
  - move the CP to cell g10, < >
- 11 - Follow step 10 to obtain the percentages of the other occupations with the appropriate changes in cell numbers.
- 12 - When finishing the totals and percentages the table will look like the following:

Table 1  
Public Sector Employment by Nationality and Occupation in 1986

| Code | Occupation          | Yemeni | non-Yemeni | Total | % non-Yem |
|------|---------------------|--------|------------|-------|-----------|
| 010  | Phys Sci & rel      | 146    | 26         | 174   | 15        |
| 020  | Engi & Archit       | 578    | 165        | 743   | 22        |
| 050  | Life Scient         | 152    | 43         | 195   | 22        |
| 060  | Doctors & Pharm     | 935    | 885        | 1820  | 49        |
| 080  | Stat, Math, Comp    | 113    | 9          | 122   | 7         |
| 090  | Economists          | 353    | 5          | 358   | 1         |
| 110  | Accountants         | 1903   | 100        | 2003  | 5         |
| 120  | Lawyers, Judges     | 797    | 10         | 807   | 1         |
| 130  | Teachers (Inter,Se) | 5400   | 6770       | 12170 | 56        |
| 140  | Workers in Religion | 845    | 85         | 930   | 9         |
| 150  | Authors, Journ      | 230    | 1          | 231   | 0         |
| 190  | Social Workers      | 316    | 20         | 336   | 6         |
| 199  | Other Professions   | 872    | 40         | 912   | 4         |
|      | Total Prof. Occ     | 12642  | 8159       | 20801 | 39        |

13 - To save your table on the disk in the A drive,

- press: / File Save Esc

14 - Since you have saved your table, now Lotus™ will ask you if you want to replace it or cancel the command, in this case we want to replace, so:

- press: R

15 - To exit from Lotus™:

- press: / to get to the menu
- choose Quit by pressing Q

Lotus™ will ask you if you have saved your work, and since you did in step 12,

- press: Y

### Exercise 3

In this exercise you are required to insert and delete rows and columns from the table you did in the previous Exercise using the Lotus™ spreadsheet by following these steps:

Steps:

- 1 - To get access to the spreadsheet,
  - type: 123
  
- 2 - To retrieve your table,
  - press: / for the menu
  - choose **File** by pressing **F**
  - choose **Retrieve** by pressing **R**
  - press: **Esc**
  - type: **A:table1.wk1**
  
- 3 - Insert a row between the first and second occupation, line 9 and 10. Move the CP to any cell in line 10 (choose cell a10). Then:
  - press: / for the menu
  - choose **Worksheet** by pressing **W**
  - choose **Insert** by pressing **I**
  - choose **Row** by pressing **R**
  - press: < >
  
- 4 - Insert a line between the rest of the occupations by following the above steps with respective changes in cell numbers.
  
- 5 - After inserting the lines the table will look like this:

Table 1  
Public Sector Employment by Nationality and Occupation in 1986

| Code | Occupation          | Yemeni | non-Yemeni | Total | % non-Yem |
|------|---------------------|--------|------------|-------|-----------|
| 010  | Phys Sci & rel      | 146    | 26         | 174   | 15        |
| 020  | Engi & Archit       | 578    | 165        | 743   | 22        |
| 050  | Life Scient         | 152    | 43         | 195   | 22        |
| 060  | Doctors & Pharm     | 935    | 885        | 1820  | 49        |
| 080  | Stat, Math, Comp    | 113    | 9          | 122   | 7         |
| 090  | Economists          | 353    | 5          | 358   | 1         |
| 110  | Accountants         | 1903   | 100        | 2003  | 5         |
| 120  | Lawyers, Judges     | 797    | 10         | 807   | 1         |
| 130  | Teachers (Inter,Se) | 5400   | 6770       | 12170 | 56        |
| 140  | Workers in Religion | 845    | 85         | 930   | 9         |
| 150  | Authors, Journ      | 230    | 1          | 231   | 0         |
| 190  | Social Workers      | 316    | 20         | 336   | 6         |
| 199  | Other Professions   | 872    | 40         | 912   | 4         |
|      | Total Prof. Occ     | 12642  | 8159       | 20801 | 39        |

- 6 - Now delete the rows inserted in the table by reversing the process. Move the CP to any cell in the line you want to delete (choose cell a10).
- press: / to get the menu
  - choose **Worksheet** by pressing **W**
  - choose **Delete** by pressing **D**
  - choose **Row** by pressing **R, < >**
- 7 - Delete the rest of the inserted lines between the occupations by following the above steps with the appropriate changes in cell numbers.
- 8 - After deleting the lines the table will look like the original one without the inserted lines.
- 9 - Insert one column between the **Total** and **% non-Yem** columns:
- move the CP to column i (**% non-Yem**)
  - press: / to get to the menu
  - choose **Worksheet** by pressing **W**
  - choose **Insert** by pressing **I**
  - choose **Column** by pressing **C, < >**
- 10 - Delete the column you inserted between the **Total** and **% non-Yem** columns:  
move the CP to the empty column before the **% non-Yem** column.
- press: / to get to the menu
  - choose **Worksheet** by pressing **W**
  - choose **Delete** by pressing **D**
  - choose **Column** by pressing **C, < >**
- 11 - After deleting the column, the table will look like the original one without the inserted column.

12 - Make the percentage of non-Yemeni workers in the last column 4 digits after the decimal point by typing:

- press: / to get to the menu
- choose **Range** and press: < >
- choose **Format** and press: < >
- choose **Fixed** and press: < >
- type **4** and press: < >

Define the range of the last column by typing the addresses of the top cell and the bottom cell, and press: < >

13 - Print Table 1 by giving the following commands:

- press / to get to the menu
- choose **Print** and press: < >
- choose **Printer** and press: < >
- choose **Range** and define the range of the table by typing the top left cell address and the bottom right cell address and press: < >
- choose **Go** and press: < >

#### Exercise 4

In this exercise you are required to continue to add to the table other groups of occupations. You need to add the labels of the additional occupations and enter their data for only Yemeni and non-Yemeni workers.

1) Use Lotus™ to derive the total workers (Yemeni and non-Yemeni) and the percentage of the non-Yemeni workers to the Total.

2) Derive also the sub-totals of the occupation groups as they are classified in Table 1 below.

The data and labels you need to enter are found in the same table. Follow the same procedures and steps outlined in previous exercises.

Table 1  
Public Sector Employment by Nationality and Occupation in 1986

| Code | Occupation          | Yemeni | non-Yemeni | Total | % non-Yem |

### Exercise 5

Add a new column at the end of Table 1 using Lotus™ spreadsheet commands and calculate in that column the percentage of Yemeni workers to the total workers for every occupation. Follow the same procedures and steps outlined in previous exercises. The table will look like the following:

Table 1

## Public Sector Employment by Nationality and Occupation in 1986

| Code | Occupation          | Yemeni | non-Yemeni | Total | % non-Yem | Yemeni |
|------|---------------------|--------|------------|-------|-----------|--------|

LABOR FORCE AND MANPOWER  
GLOSSARY

Active Employment Policy

سياسة العمالة الفعالة

Measures which effect labor as a factor in production.

الاجهزة التي تؤثر على العمل لغرضه من عناصر الإنتاج

Active Labor Force

القوى العاملة الفعالة

(See Economically active population.)

(إنظر السكان النشيطين اقتصادياً)

Activity Rate

معدل النشاط

(See Labor Force Participation Rate.)

(إنظر معدل مشاركة القوى العاملة)

Adult Education

تعليم البالغين

Education for adult (grown up) people, generally in ages after school age.

التعليم للبالغين من السكان، ويشمل عادة الأعمار بعد سن التعليم.

Apprentice

المقرن

Apprentice refers to a status of an occupation. It implies that the worker is in a learning status regarding the functions of the occupation and, as a rule, has entered into a formal agreement with his employer.

يشير المقرن إلى حالة معينة من الرتبة الوظيفية، ويعني أنه العامل يتعلم أداء الوظيفة بالتفاهة مع رئيس العمل.

Apprenticeship

مدة التمرين

Apprenticeship is the period of being an apprentice or the status of working as an apprentice (see Apprentice).

الفترة التي يقضيها المقرن كونه تحت التمرين

Artisan

Skilled workman or craftsman in industry or trade.

عامل ماهر او حرفي يعمل في الصناعة او الحرف .

Automation

Use of machinery to save manual labor.

الآلية  
استخدام المكننة لتوفير العمل اليدوي

Background

A person's cultural knowledge, education and experience.

الخلفية  
خبرة الشخص وتعليمه وعمله والتفاهيه

Budget

Estimate of probable future income and expenditure; manpower budget is estimated supply and requirements of manpower in a future period (e.g., Fourth Plan Period).

الميزانية  
تقديرات الدخل والنفق في المستقبل  
وميزانية القوى العاملة هي الميزانية  
بمجرد العرض والطلب من القوى  
العامله خلال فترة زمنية معينة

Business

Buying and selling (i.e., commerce), or commercial enterprise or shop.

التجارة  
البيع والشراء ( التجارة ) او عمل تجاري  
او عمل تجاري

Buyers Market

Condition where supply exceeds demand and prices are low.

سوق البائعين  
يكون في حالة زيادة العرض على الطلب  
وانخفاض الأسعار .

By-product

Substance obtained during the manufacture of some other substance.

المنتج الفرعي  
المادة التي تنتج خلال تصنيع مادة أخرى .

Capital Coefficient

معامل رأس المال

(See Capital-output Ratio.)

ر (انظر نسبة رأس المال إلى الإنتاج)

Capital-intensive

الاجلوب الكثيف لرأس المال

Input use of much greater capital than labor per produced unit.

هو الذي يستخدم رأس المال بسنة  
أكثره العمل لكل وحدة منتجة

Capital-output Ratio

نسبة رأس المال إلى الإنتاج

Relation of capital required to increase output by one unit per annum, adapted to one sector of economy or the national economy as a whole.

الاحتياجات من رأس المال للإنتاج وحدة  
واحدة من الإنتاج خلال سنة في  
قطاع معين أو في كافة القطاعات

Civil Servant

الموظف المدني

Government employee.

الشخص الذي يعمل في الحكومة

Civil Service

الخدمة المدنية

All government departments except the Navy, Army, and Air Force.

كافة الأقسام والهيئات الحكومية  
علا المؤسسات العسكرية .

Classification of Economically Inactive Population

تصنيف الطائفة غير النشطين اقتصادياً :

Classification recommended by the United Nations by: (1) homemakers (housewives and other relatives); (2) students; (3) persons in institutions; (4) income recipients; and (5) others.

التصنيف الذي ادرته الأمم المتحدة هو :  
١- ربات البيوت ، طلاب ، الجواري  
٢- الأشخاص الذين يعيشون في دور  
٣- آخرون .

## Classification by Status

## التصنيف حسب الحالة :

Classifying workers according to whether the individual is an employer or employee. Also another meaning of classifying workers according to whether at a given time the individual is employed or unemployed.

تصنيف العاملين حسب كون الشخص مستخدماً أو يعمل لحسابه ، ويعني أيضاً كما بعض الحالات تصنيف العمال في وقت معين فيما أنهم مستخدمون أو عاطلون .

## Classification of Type of Employment Status

## التصنيف حسب نوع الحالة الوظيفية :

In general a classification into four categories: (1) own account workers; (2) employer; (3) employee; and (4) unpaid family worker. (These four categories are recommended by ILO.) Classification of Type of Enterprise. In general a classification of enterprises into small-scale or large-scale enterprises, and public or private enterprises, sometimes also semipublic or other indications (as recommended by ILO).

أوصت منظمة العمل الدولية بتصنيف العمال إلى أربع مجموعات: (1) المتفعلون لحسابهم ، (2) الموظفين ، (3) الموظفون ، (4) العاملون بدون أجر . وتوصي المنظمة بتصنيف المؤسسات المتناهية في الحجم إلى مؤسسات صغيرة وأخرى كبيرة ، حسب طلبتها إلى أهلية وإهلية (خاصة) وتصان أحياناً مجموعات أخرى هي المؤسسات شبه الحكومية .

## Collective Bargaining

## المفاوضات الجماعية :

Negotiations for collective contracts between employers and workers on wages and conditions of work.

وهي المفاوضات التي تتم بين رؤساء العمل والعمال حول تنظيم الأجور وظروف العمل .

## Collective Contracts

## العقود الجماعية

Employment contract concluded after collective bargaining between employers and workers organizations.

وهي العقود التي تتم بين مؤسسات العمل والعمال بعد عقد المفاوضات الجماعية .

## Commerce

## التجارة

Exchange and distribution of goods.

وهي تبادل وتوزيع السلع والخدمات .

Commercial Education

التعليم التجاري

Vocational training and education of workers and professionals for commercial occupations.

التدريب المهني والتعليم الذي يهدف لإعداد العمال للمهن التجارية .

Comprehensive School

المدسة الشاملة

Large school that combines all types of secondary education (i.e., grammar school, secondary modern, and technical) for all children of a district.

وهي المدسة التي تتكون من كافة أنواع التعليم الثانوي (ثانوي عامة، فني، الخ)

Consumer Price Indices

معايير أسعار المستهلك

Measurements of changes in the cost-of-living at different periods.

معايير التغيرات الحاصلة في تكاليف المعيشة خلال فترات زمنية معينة .

Consumption

المستهلاك

Using up, (consuming) of food, energy and materials and also the quantity consumed.

استخدام أو استهلاك السلع والمواد الغذائية والطاقة والمواد الأخرى

Counter-inflationary Policy

السياسة ضد التضخم الاقتصادي

Policy to reduce the level of economic activity, using such measures as tighter credit, dearer money, or limited public expenditure.

وهي التي تستهدف تقليص النشاط الاقتصادي باتباع وسائل معينة كتمديد سياسات الائتمان وتمديد عرض النقود أو المصروفات الحكومية .

Cyclical Unemployment

البطالة الدورية :

Unemployment due to contraction of the economic activity caused by cyclical changes or recession of the economy.

هي البطالة الناتجة عن الانكماش الاقتصادي الناتج عن التغيرات الدورية في الاقتصاد .

Demographic Data

البيانات السكانية

Statistics on population, births, deaths, immigration, growth, etc.

الإحصاءات عن السكان، المواليد، الوفيات، الهجرة، النمو، الخ.

Denationalize (privatisation)

تقليص القطاع العام

Transfer a nationalized industry to private ownership again.

يتم منه تحويل ملكية الصناعات من القطاع العام إلى القطاع الخاص.

Density of Population

الكثافة السكانية

Number of persons living within a square kilometer.

عدد السكان الموجودين في كل كيلومتر مربع.

Dependent

التابع

As person who depends upon another for a home, food, etc.

الشخص الذي يعتمد في حياته على شخص آخر.

Depopulation

تقليص السكان

Lessening the number of people living in a place, a region, or a country.

تقليل عدد السكان في مكان، منطقة، أو بلداً.

Depressed Areas

الناطقم المتخلف

Areas of country with a less developed economic structure.

وهي المناطق ذات التركيب الاقتصادي الأقل تطوراً.

Depression

الانكماش

A period when business and economic activity are slackening, very often resulting in unemployment.

وهي الفترة التي تتلخص فيها الانحلال والضعف في النشاط الاقتصادي نتيجة من ارتفاع البطالة.

Dismissal

الخص :  
ويتم إنهاء عمل الموظف منه وظيفته

Ending of employment by action from the employer.

Displacement

سياسة التبديل

Changing from one method to another, or in labor market policy, displacement is used in the sense of displacement of human labor by machines (automation).

وتعني تغيير الطريقة المتبعة اذ في سياسة العمل تمنع تبديل العنصر البشري بالآلات .

Economy

الاقتصاد .

Control and management of the money, goods, and other resources of a community, society of household.

يعني السيطرة وإدارة الموارد المالية والسلع وغيرها من بيئته ، مجتمع ، أو عائلة معينة .

Economically Active Population

الطائفة النشطة اقتصادياً

The part of the population which is actually working.

الجزء من السكان الذين يعملون فعلياً .

Employment Agency

وكالة الاستقدام " التوظيف "

Business establishment which helps persons to find employment.

المؤسسة التي تساعد الأشخاص في الحصول على وظيفة او عمل .

Employment Market Analysis

تحليل سوق العمل :

Analysis of supply and demand of manpower.

تحليل الطلب والرضى من القوى العاملة .

Excess Demand

فائض الطلب

Instances where the demand for labor is higher than the supply of labor.

في هذه الحالة يكون الطلب على القوى العاملة أكثر من الرضى .

Fertility

المضوية

Children born alive.

الواليد الذي يولد في أحياار .

Foreman

رئيس "كبير" عمال

The foreman is normally a craftsman or other specialized worker who has been given additional duties. There are two main types of foremen, namely: a) those who work with a group of workers performing particular functions and who themselves carry out some of the duties in addition to exercising supervision, assigning work, and coordinating the efforts of the group, and b) those who do not as a rule perform any of the work themselves but carry out the other duties of foremen described in a), sometimes supervising workers in more than one occupation.

كبير العمال هو عامل حرفي او عامل متخصص يعطى رآآ اضافية . وهناك نوعين من رؤساء العمال : (أ) هؤلاء الذين يعملون مع العمال في تأدية الرآآ بالاضافة الى اعمال الإشراف ، توزيع الرآآ ، وتسيير الجهد ، (ب) هؤلاء الذين يمارسون الرآآ الإشرافية فقط ، واهيئات يشرفون على أكثر من وحدة او وظيفة واحدة .

Frequency

التكرار

Rate of occurrence in statistics.

عدد تكرار التكرارات في علم الإحصاء .

Full Employment

العمالة الكاملة

Labor force is employed on such a high level as turnover and practical arrangements permit. The policy of full employment is accepted as a guideline in many countries.

هي الحالة التي يكون فيها كافة العاطلين يعملون بأعمال الجهات التي ليس بها سدك لدراسة العمل او الحالات العملية . التردد في العالم تضع العمالة الكاملة (بصفة عامة) أهداف التسيير .

Household Unit

الوحدة العائلية :

A household unit consists, as a rule, of persons who share a dwelling and have a common economy.

مصطلح إحصائي يعني كاتة الأشخاص الذين يتشاركون في السكن والاقتصادات .

Human Investment

استثمار العنصر البشري

Training and education of labor.

تدريب وتعليم عنصر العمل .

Industrial Classification

التصنيف الاقتصادي

Classifying workers according to the economic activity in which the work is performed.

تصنيف العاملين حسب النشاط الاقتصادي في المؤسسات التي يعملون بها .

In-Plant Training

التدريب داخل المؤسسة

Vocational training organized in an establishment; also on-the-job training.

تدريب مهني ينظم داخل المؤسسة أو التدريب أثناء العمل .

Investment

الاستثمار

Pushing money into an economic activity in an establishment, such as new machines, (investing in capital) or for vocational training for workers (investing in labor).

إستثمار الأموال في النشاط الاقتصادي داخل المؤسسة كإستثمار الآلات (إستثمار رأس المال) أو تدريب العاملين (إستثمار في العمل) .

Investment Plan

خطة الإستثمار

A plan which includes the projects planned for investment in the economic plan.

خطة تشمل مشاريع الإستثمار ضمن خطة التنمية الشاملة .

Job Seeker

العاثت بحسب العمل

A person actively seeking work through such means as registering at a placement office, answering advertisements of job vacancies, or visiting employers asking for work.

الشخص الذي يبحث بحسب العمل بحسب طريقه عن طريق التوظيف ، الإستجابة للإعلانات عن وظائف متوفرة ، أو التقدم الى رؤساء العمل لطبقت التوظيف .

Labor Coefficient

عامل العمل :

(See Labor-output Ratio.)

(رأى نسبة العمل للنتائج)

## Labor Force

The part of the population which is economically active as well as the unemployed who are seeking work.

## قوة العمل

الجزء من السكان الذين يعملون، وتُشكل أيضا الجزء الذي لا يعملون لكنهم يبحثون عن عمل.

## Labor Force Data

Distribution of labor force by age, sex, employment status, branch of activity, education and other relevant characteristics and trends.

## بيانات قوة العمل

توزيع القوى العاملة حسب النوع العمر، الحالة الوظيفية، نوع النشاط، الأهل، التعليم وبعض الخصائص الأخرى.

## Labor Force Participation Rate

The crude LFPR is the number of the labor force divided by the number in the total population. The age specific LFPR is the number in a labor force in a certain age group divided by the population of that age group. Crude and age specific ratios are derived for males, females, and total population.

## معدل مشاركة القوى العاملة

إنه معدل المشاركة الخام هو قسمة القوى العاملة على مجموع السكان. أما معدل المشاركة حسب العمر فهو قسمة عدد القوى العاملة في عمر معين على عدد السكان في ذلك العمر. ويتخرج معدل المشاركة الخام وحسب العمر للذكور والإناث وللمجموع الكلي.

## Labor Force Reserve

Those persons who are outside the labor force, but who can easily be mobilized if certain conditions are met. One category is married women, who often can enter the labor force if they can find someone to look after the children. Underemployed people are include in the labor force reserve.

## إحتياطي القوى العاملة :

الأشخاص الذين لا يكونون خارج القوى العاملة وتعليمهم ودخلهم أيضا تمت ظروف معينة مثل النساء المتزوجات حيث يمكن أن يدخلن قوة العمل إذا توفر لهن المتور على ما يهتم بأطفالهن. وتعتبر الأشخاص غير المستخدمين من ضمنه إحتياطي القوى العاملة.

## Labor Force Sample Surveys

A study of the labor force by sample, i.e., a part of the population is chosen and studied regarding employment and other characteristics of interest for economic planning and labor market policy. The sample is chosen to represent the whole population (see Cross-section).

## سوح القوى العاملة بالعينة

دراسة الجوانب المتعلقة للقوى العاملة بواسطة اختيار عينة من السكان ودراسةها بغرض التخطيط الاقتصادي وتحديد سياسات سوق العمل.

## Labor-intensive

Use of much greater amount of labor (than of capital output) per unit produced.

## الاستخدام المكثف للعمل

استخدام مقدار العمل التزمه منصر رأس المال لكل وحدة مُنتجة .

## Labor Market

Market where the supply and demand for labor meet and result in employment.

## سوق العمل

السوق الذي يتلاقى فيه الطلب والعرض من القوى العاملة .

## Labor Market Statistics

Statistics on labor market problems, workers, establishments, wages, worked hours, labor force, etc.

## إحصاءات سوق العمل

الإحصاءات المطلقة بمثل سوق العمل والعمال والمؤسسات ، لإجراء إحصاءات العمل ، الخ .

## Labor-output Ratio

Number of workers employed in relation to production. The reciprocal of this formula is labor productivity (see Labor Productivity). L.O.R. is also called the labor coefficient.

## نسبة العمل إلى الناتج

نسبة عدد العمل المستخدم من الإنتاج إلى قيمة الإنتاج وتسمى هذه النسبة أي قيمة الإنتاج على عدد العاملين بإحدى إتناهية العمل .

## Labor Productivity

Production divided by the number of workers.

## إنتاجية العمل

قيمة الإنتاج مقسومة على عدد العاملين .

Manpower

القوى العاملة

Number of people available for industrial labor needs.

مقدار الأشخاص المتوافرين لعدد احتياجات العمل.

Manpower Planning

تخطيط القوى العاملة

Analysis and forecast of quantitative and qualitative aspects of the current and future manpower supply-demand situation.

التحليل التوقعي والكمي للقوى العاملة الموجودة واستماتات الطلب والعرض من القوى العاملة.

Manpower Surplus Area

منطقة تتمتع بفائض من القوى العاملة.

Region with a surplus of labor (unemployed or underemployed).

هي المنطقة التي يتوفر بها فائض من القوى العاملة.

Manufacture

التصنيع

Making or production of goods and material.

إنتاج ارضياته السلع والمواد

Mobility of Labor

حركة العمل الجغرافية

Migration and movement of workers, from one area to another (geographic mobility).

انتقال وهجرة العاملين من منطقة إلى أخرى.

National Accounts Data

بيانات الحسابات القومية

Rates of saving and investment, income or value added per worker by branch of activity, industry, or sector.

معدلات الادخار والاستثمار والدخول او القيمة المضافة للعامل من قبل مؤسسة او قطاع

Occupation

المهنة "الوظيفة"

Business or trade; work.

طبيعة عمل الفرد، تجارة، او وظيفة

### On-the-job Training

Training of workers directly in production, (on-the-job) used as opposed to vocational training in schools.

التدريب - أثناء العمل :

تدريب العمال بصورة مباشرة أثناء أداءهم لوظائفهم ، وهو يختلف عن التدريب المؤقت في المدارس .

### Per Capita Income

The national income divided by the number in the population.

مقدار نصيب الفرد من الدخل القومي ،

مما حصل قسمة الدخل القومي على عدد السكان ، فمثلاً سنة معينة .

### Population Census

Enumeration of the people in a country.

الدمصاص السكاني :

تعداد السكان في بلد ما في وقت محدد زمني معين .

### Productivity

Units of Output: productivity is usually man-hours worked, measured by dividing output in physical units by man-hours worked.

الانتاجية

تعددت ما ينتجه العامل الواحد ، وتتم قياسها لكل ساعة عمل .

### Profession

Occupation requiring advanced education or special training, such as law, architecture, and medicine.

التخصص الوظيفي " المهنة "

المهنة التي تتطلب تعليماً عالياً أو تدريباً خاصاً كالقانون ، الطب ، الهندسة المعمارية الخ .

### Seasonal Employment

Employment depending on conditions which do not allow for permanent work during the whole year; for example, agriculture in areas with climate impeding cultivation during winter or dry periods.

العمالة الموسمية .

العماله التي تعمل فترات موسم معينة من السنة كما لعماله في القطاع الزراعي في موسم معين موسم الحصاد .

## Underemployment

Inadequate utilization of available human resources and capacities. Underemployment can be identified by two broad types: (1) visible underemployment, which results from an insufficiency in the volume of employment opportunities, and (2) invisible underemployment, which occurs when there is a qualitative inadequacy in employment. The ILO definition of underemployment recognizes four types: (1) inadequate partial utilization of available work time; (2) skill underutilization; (3) abnormally low income; and (4) low productivity.

## Unemployed

A person without a job but genuinely desiring work, i.e., actively seeking work.

## Unemployment

Amount of unused labor; also, state of being unemployed.

## البطالة القنصية

وقنص لعدم إستخدام الموارد والطاقات الإستخدامية جيداً، وهي نوعين: (1) بطالة قنصية ظاهرة وتأتي نتيجة لعدم وجود فرص عمل كافية، (2) بطالة قنصية خفية الناتجة من عدم إستخدام القوى العاملة إستخداماً جيداً. وكيفية تنظيم العمل الدولي البطالة القنصية وتتميز بالربط النوعي: (3) عدم الاستفادة من وقت العمل وإستخدامه بشكل أفضل، (4) عدم الاستفادة من المهارات المتاحة، (5) العمالة ذات الدخل المنخفض (6) العمالة ذات الإنتاجية المنخفضة.

العاطل:

شخصاً بدون عمل، ويبحث عن التوظيف، ويبحث عليه بشكل فعال.

## البطالة

الجزء غير المستخدم من القوى العاملة بشكل أيضا العاطلون الذين يبحثون عن عمل.

## Seasonal Unemployment

## البطالة الموسمية

Unemployment due to seasonal slacking in activity, as in agriculture, where the climate prevents cultivation the year round.

هي البطالة التي تحدث في فترات معينة من السنة كالزراعة التي لا يمكن عملها على مدار السنة بسبب الظروف الجوية في الزراعة.

## Self Employed

## العامل لحسابه

Working without an employer.

الشخص الذي يعمل لحسابه وبدون رئيس عمل.

## Service Sector

## قطاع الخدمات

That sector of the economy which includes governmental, community, business, recreational, and personal services.

القطاع الذي يتكون من الخدمات التي تقدمها المؤسسات الحكومية، الاقتصادية، الاجتماعية، أو الخاصة.

## Structural Unemployment

## البطالة الهيكلية

Unemployment due to changes in methods of work, such as mechanization, replacement of camels and donkeys with motorized trucks, electrification, etc.

البطالة الناتجة عن التغييرات في طرق العمل، مثل الميكنة، استبدال الجمال والحمير بالسيارات المحركة، الكهرباء، الخ.

## Surplus Labor

## فائض العمل

Workers for whom there are no jobs.

يسأل العمال الذين لا يجدون أعمالاً أو وظائف.

## Traditional Sectors

## القطاعات التقليدية

Sectors of economic activity which have not been modernized, such as in developing countries, agriculture, handicraft work, etc. The contrary is the modern sector; generally, manufacture, electricity, transportation, etc.

القطاعات التقليدية هي القطاعات التي تشمل صناعات إقتصادية لم يتم تحديثها للوصول إلى الحال في مجالات الزراعة والحرف في البلدان النامية. وتختلف هذه القطاعات الحديثة التي تشمل التصنيع، الكهرباء، النقل، الخ.

Improving the Efficiency of Educational Systems (IEES) is an initiative funded in 1984 by the Agency for International Development (AID), Bureau for Science and Technology, Office of Education. The principal goals of the IEES Project are to help developing countries improve the performance of their educational systems and strengthen their capabilities for educational planning, management, and research. To achieve these goals, a consortium of U.S. institutions has been formed to work collaboratively with selected host governments and USAID Missions for ten years. The Consortium consists of The Florida State University (prime contractor), Howard University, the Institute for International Research, and the State University of New York at Albany.

There are seven countries working with the IEES initiative to improve educational efficiency: Botswana, Haiti, Indonesia, Liberia, Nepal, Somalia, and Yemen Arab Republic.

Documents published by IEES are produced to promote improved educational practice, planning, and research within these countries. All publications generated by project activities are held in the IEES Educational Efficiency Clearinghouse at The Florida State University. Requests for project documents should be addressed to:

Manpower Education Model  
**MEM**  
Overview

## Manpower Education Model Overview/Notes

- A. MRM - Manpower Requirement Model (Demand)
- B. ESM- Education Simulation Model (Education and Training System)
- C. MAM - Manpower Allocation Model (Supply and Balancing)

### Major Components\*

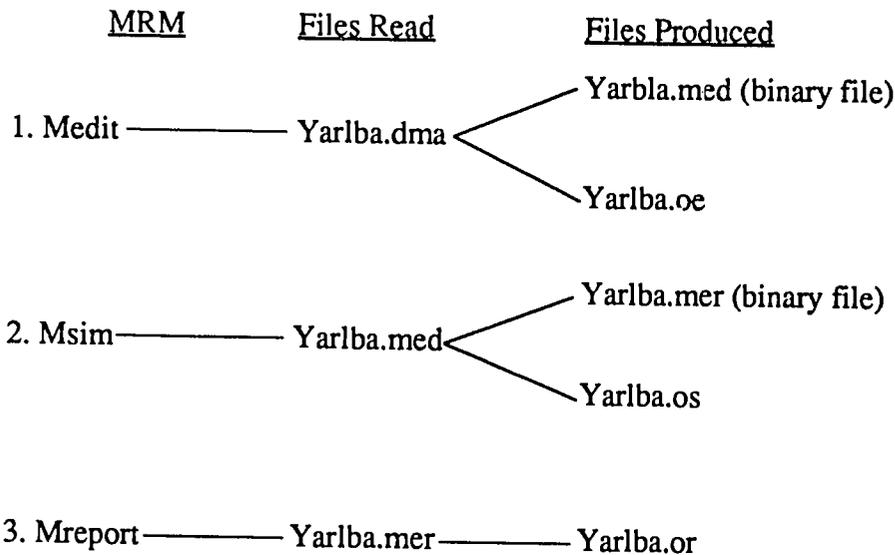

1. Input Data Files - for A) MRM = Yarlba.dmr = input data file for demand  
B) ESM = Yarlba.des = input data file for projections  
C) MAM = Yarlba.dma = input data file for demand and supply

**NOTE:** MRM and/or ESM can be run separately if required; MAM cannot — it involves the use of all three data files.

2. Medit = to edit, check errors, add, delete, etc. If no errors, go to Msim.  
Msim = does the actual calculation; projection for the required number of years, starting from the base year.  
Mreport = give the table's name and the year to print the report. It produces a specified table for a specific number of years.
3. Reports = a starting print; have a clear idea of what you want in advance.

\* Norton Editor

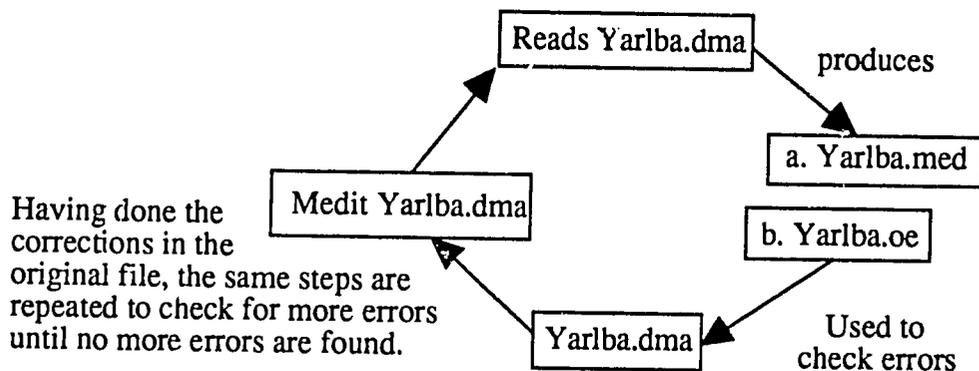

Cycles of MEM Operators

ASCII format and Binary format

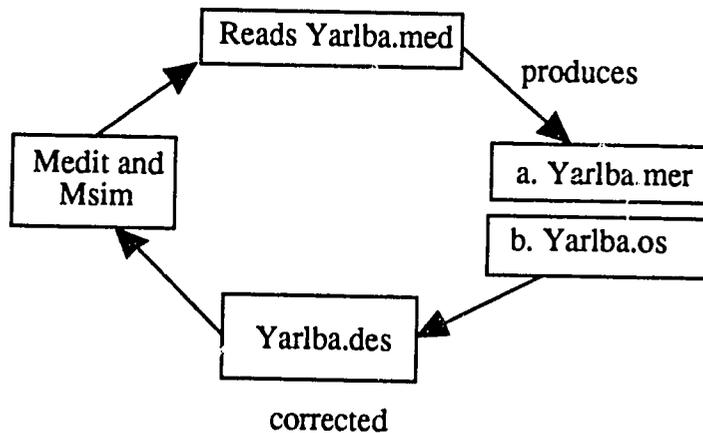

All the input data files and all the output files are in an ASCII format, with the exception of the Yarlba.med and Yarlba.mer files, which are in binary format.

Medit Cycle

If there are no errors you can proceed to do the projections (Msim); if there are errors, recall the original data file (Yarlba.dma) to make the necessary corrections.

Msim Cycle

Mreport Cycle

## Commands

### MRM

- cd\mem
- dir yarlba.des
- to check dat; medit yarlba. \_dmr nofile \_dmr nofile
  - \*if there are errors: ne yarlba.or to correct errors: ne yarlba.dmr
- to project (no error): msim yarlba. 1986 6 - yes esm
  - \*if there are errors, repeat above
- if no error, select a table (ECY) ; mreport yarlba ecy 1986-1991
- to call it up and look at it: ne yarlba.or
- to split the screen: F3, X
- to bring out the original table: ne yarlba.or
- Comparing:
  - a. To delete a block: 1. move the cursor to the beginning of the block
    2. Press F4, then S <> (<> = return or enter key)
    3. Move the cursor to the end of the block
    4. Press F4, then S <>
    5. Press F4, then D <>, then Y
  - b. To print a block: Steps 1 - 4 above,
    5. Press F7, then B, then Y
  - c. To delete a line: Press ALT+L (+ = at the same time)
  - d. To restore the line: Press Alt+U
  - e. To save without exiting: F3, then S, then Y to print
  - f. To quit: Press F3, then Q, then Y

### How to combine files (tables) into one file (exer 123.or)

- a. ne exer123.or
- b. F3 X to split the screen
- c. exer1.or to retrieve the file
- d. F4 S to define the upper limit of table I
- e. F4 S to define the lower limit of table I
- f. F3 X to go to upper or lower screen
- g. F3 W to copy from lower to upper screen
- h. F3 X to go to lower screen
- i. F3 Q Y to exit

### MRM Tables

- OEPSY
- OSY
- ESP
- PSY
- MRSO
- MROY

### ESM

- Yarlba \_dma nofile \_dmr nofile
- if errors exist: **ne yarlba.oe**
- to correct errors: **ne yarlba.des**
- if no errors: **msim yarlba 1986 6 - yes esm**
- no errors: **mereport yarlba 1986 - 1991 (Section 5)**

### ESM Tables

See section five.

- ECY (Enrollment by Course and Year)
- ECLY (Enrollment by Course Level and Year)
- GTCY (Graduates of Terminal Course by Year)

Manpower Requirements Model  
**MRM**  
YAR Input Data Set

## **Introduction**

This section contains the input data set for the Manpower Requirements Model, the first sub-model of the Manpower and Education Model. The data in this section are derived from YAR statistics and include estimates and assumptions for training purposes.

Education Simulation Model  
**ESM**  
YAR Input Data Set

## **Introduction**

This section contains the input data set for the Education Simulation Model, the second sub-model of the Manpower and Education Model. The data in this section are derived from YAR statistics and include estimates and assumptions for training purposes.

-- Education Simulation Test Data

#DESC -- data description

-- description

-- text

Education Projection is based on YAR3 with updating and changes. Changes included enrollment in the University faculties by year. It also includes fine tuning of the flow of students into the university faculties taking into consideration each faculty present capacity.

**Sources:**

**Educational Statistical Yearbook, MOE, 1987**

**Education in 25 years of the revolution, MOE, 1988**

**Statistical Year Book 1986, CPO**

**Assumptions:**

**constant efficiency rates**

**constant disposition rates**

Manpower Allocation Model  
M A M  
YAR Input Data Set

## **Introduction**

This section contains the input data set for the Manpower Allocation Model, the third sub-model of the Manpower and Education Model. The data in this section are derived from YAR statistics and include estimates and assumptions for training purposes.

-- Manpower Allocation Data

#DESC -- data description

-- description

-- text

**Manpower Allocation Data for YAR Test Dataset**

#TITLE -- report title

-- title

-- text

**Central Planning Organization, Yemen Arab Republic, Sana'a (Nov. 1988)**

#UNITS units of output (optional if included in Manpower Requirements data)

-- output

- units

#AGE -- age range (optional if included in Education Simulation data)

-- minimum maximum

-- age age

#MWA -- minimum working age

-- minimum

-- age

- to work

**15**

#WP -- waiting periods in time filters

-- maximum maximum maximum

-- leaver leaker outmigration

-- wait wait time

0 0 7

#COR -- courses (optional if included in Education Simulation data)

-- number males,

-- course ideal of females, course

-- code age ages or both title

#NAT -- nationalities

-- nationality nationality

-- code title

exp non Yemenis

#SEC -- economic sectors (optional if included in Manpower Requirements data)

-- sector sector

-- code title

#OCC -- occupation groups (optional if included in Manpower Requirements data)

-- occupation occupation

-- code title

#POOL -- labor pools

-- labor labor  
-- pool pool  
-- code title  
one professional and technical occupations (A-1)  
two other professional occupation (A-2)  
three science technician (B-1)  
four non-science sub-professional (B-2)  
five skilled/intermediate-skilled office occupation (C)  
six skilled/intermediate-skilled manual occupation (D)  
seven semi-skilled;primary/literacy plus job training (E)  
eight unskilled occupation (F)

#TO -- target sectoral output

-- sector target  
-- year code output

#TMR -- target manpower requirements

-- sector occupation manpower  
-- year code code requirement

#IUSL -- initial underage school leavers

-- graduate male, number  
-- course or female, of  
-- year code dropout age or each leavers

Simulation Esmotpt

Edited data file:

Produced from:

Education Simulation Data File:

Education Simulation Data Description:

Education Projection is based on YAR3 with updating and changes.

Changes included enrollment in the University faculties by year.

It also includes fine tuning of the flow of students into the university faculties taking into consideration each faculty present capacity.

Sources:

Educational Statistical Yearbook, MOE, 1987

Education in 25 years of the revolution, MOE, 1988

Statistical Year Book 1986, CPO

Assumptions:

Constant efficiency rates

Constant disposition rates

Results file:

Containing:

Education Simulation results produced from:

Edited data file with parameters:

Base year of simulation: 1986

Number of years of simulation: 6

Simulate with missing data not selected.

Loading printer parameters from file printpar.mem

-- printer parameters for the Manpower and Education Model

page width 132 -- columns on a page

page length 66 -- lines on a page

form feed yes -- use form feed character ^L to cause top of page

-- specify "form feed no" if form feed character ^L is not to be used

-- and instead pagination of output is to be handled by counting lines

## Simulation Yar16a

Edited data file: yar16a.med dated Tue Nov 01 18:36:04 1988

produced from:

manpower requirements data file: yar16a.dmr dated Tue Nov 01 18:34:38 1988

education simulation data file: yar16a.des dated Tue Nov 01 18:34:02 1988

manpower allocation data file: yar16a.dma dated Tue Nov 01 18:34:34 1988

### Manpower Requirements Data Description:

Manpower Requirements Data for the YAR Test Dataset

### Education Simulation Data Description:

Education Projection is based on yar3 with updating and changes.

Changes included enrollment in the University faculties by year.

It also includes fine tuning of the flow of students into the university faculties taking into consideration each faculty present capacity.

Sources:

Educational Statistical Yearbook, MOE, 1987

Education in 25 years of the revolution, MOE, 1988

Statistical Year Book 1986, CPO

Assumptions:

constant efficiency rates

constant disposition rates

### Manpower Allocation Data Description:

Manpower Allocation Data for YAR Test Dataset

Results file: yar16a.mer dated Tue Nov 01 18:37:36 1988

containing:

Manpower Requirements Simulation results

Education Simulation results

Manpower Allocation Simulation results

produced from:

edited data file: yar16a.med dated Tue Nov 01 18:36:04 1988

with parameters:

Base year of simulation: 1986

Number of years of simulation: 6

Simulate with missing data not selected.

School leaver results not saved by age.

Loading printer parameters from file printpar.mem

-- printer parameters for the Manpower and Education Model

|                |  |
|----------------|--|
| page width 136 | -- columns on a page                               |
| page length 66 | -- lines on a page                                 |
| form feed yes  | -- use form feed character ^L to cause top of page |

-- specify "form feed no" if form feed character ^L is not to be used

-- and instead pagination of output is to be handled by counting lines

Improving the Efficiency of Educational Systems (IEES) is an initiative funded in 1984 by the Agency for International Development (AID), Bureau for Science and Technology, Office of Education. The principal goals of the IEES Project are to help developing countries improve the performance of their educational systems and strengthen their capabilities for educational planning, management, and research. To achieve these goals, a consortium of U.S. institutions has been formed to work collaboratively with selected host governments and USAID Missions for ten years. The Consortium consists of The Florida State University (prime contractor), Howard University, the Institute for International Research, and the State University of New York at Albany.

There are seven countries working with the IEES initiative to improve educational efficiency: Botswana, Haiti, Indonesia, Liberia, Nepal, Somalia, and Yemen Arab Republic.

Documents published by IEES are produced to promote improved educational practice, planning, and research within these countries. All publications generated by project activities are held in the IEES Educational Efficiency Clearinghouse at The Florida State University. Requests for project documents should be addressed to:

Exercises on the  
Effects of Changes in the  
Output and Productivity Growth  
Rates on the  
Manpower Requirements

## Introduction

The purpose of these exercises is to show the effects of an increase in sectoral output growth rates on the manpower requirements.

**Exercise 1**

**CHANGING THE SECTORAL OUTPUT GROWTH RATES  
IN THE  
MANPOWER REQUIREMENTS MODEL**

**Purpose:**

The purpose of this exercise is to show the effects of the increase in sectoral output growth rates on the manpower requirements.

**Steps:**

1 - Copy yar16a.dmr and give it another name as follows:

**copy yar16a.dmr exer1.dmr**

2 - Look at the contents of the file; exer1.dmr by using the Norton Editor as follows:

**ne exer1.dmr**

3 - Use the down arrow to go to the sectoral output, you will see the following data item:

#OUT -- sectoral output

| -- | sector |             |
|----|--------|-------------|
| -- | year   | code output |
|    | 1986   | agr 10680   |
|    | 1986   | m&q 506     |
|    | 1986   | mfg 4620    |
|    | 1986   | util 220    |
|    | 1986   | con 1285    |
|    | 1986   | trh 4896    |
|    | 1986   | t&c 4106    |
|    | 1986   | b&f 4166    |
|    | 1986   | ser 4746    |
|    | 1987   | agr g3%     |
|    | 1987   | m&q g59.6%  |
|    | 1987   | mfg g9%     |
|    | 1987   | util g15%   |
|    | 1987   | con g5.2%   |
|    | 1987   | trh g5.7%   |
|    | 1987   | t&c g7.2%   |
|    | 1987   | b&f g6.5%   |
|    | 1987   | ser g8.1%   |

The upper part of the data item is the sectoral output and the lower part is the growth rate of that sectoral output.

4 - Increase the growth rates of each sector by 2 percent so the growth rates would look like the following:

#OUT -- sectoral output

| -- | sector |             |
|----|--------|-------------|
| -- | year   | code output |
|    | 1986   | agr 10680   |
|    | 1986   | m&q 506     |
|    | 1986   | mfg 4620    |
|    | 1986   | util 220    |
|    | 1986   | con 1285    |
|    | 1986   | trh 4896    |
|    | 1986   | t&c 4106    |
|    | 1986   | b&f 4166    |
|    | 1986   | ser 4746    |
|    | 1987   | agr g5%     |
|    | 1987   | m&q g61.6%  |
|    | 1987   | mfg g11%    |
|    | 1987   | util g17%   |
|    | 1987   | con g7.2%   |
|    | 1987   | trh g7.7%   |
|    | 1987   | t&c g9.2%   |
|    | 1987   | b&f g8.5%   |
|    | 1987   | ser g10.1%  |

5 - Save the file after the changes by using the Norton Editor as follows:

press: F3

then press: E

6 - Make an edit to the file by giving the following command:

**medit exer1 -des nofile -dma nofile**

If the results of the edit has errors look at your errors in the file exer1.oe by using the Norton Editor by giving the following command:

**ne exer1.oe**

Correct the errors in the input data file `exer1.dmr` and exit with save by pressing:

**F3** and then **E**

Continue to do these steps each time you have errors until you have zero errors.

7 - When you have no errors, do the simulation (i.e., projection) for six years by using the following command:

**msim exer1 1986 6 -yes mrm**

If the results of the simulation have errors look at your errors in the file `exer1.os` by using the Norton Editor by giving the following command:

**ne exer1.os**

Correct the errors in the input data file `exer1.dmr` and exit with save by pressing:

**F3** and then **E**

Continue to do these steps each time you have errors until you have zero errors.

8 - When you have no errors in the simulation produce table employment by sector and year (ESY) for the base year 1986 and the target year 1991 by giving the following command:

**mreport exer1 esy 1986 1991**

9 - Look at the ESY table using the Norton Editor by giving the following command:

**ne exer1.or**

10 - Compare the manpower requirements in ESY table that you just produced with ESY table before the changes in the base year 1986 and the target year 1991.

## Exercise 2

# DECREASING THE SECTORAL PRODUCTIVITY GROWTH RATES IN THE MANPOWER REQUIREMENTS MODEL

### Purpose:

The purpose of this exercise is to show the effects of the decrease in sectoral productivity growth rates on the manpower requirements.

### Steps:

1 - Copy yar16a.dmr and give it another name as follows:

**copy yar16a.dmr exer2.dmr**

2 - Look at the contents of the file; exer2.dmr by using the Norton Editor as follows:

**ne exer2.dmr**

3 - Use the down arrow to go to the sectoral labor productivity, you will see the following data item:

#PRD -- labor productivity

```
--          sector
--  year  code  productivity
1986  agr    g1.7%
1986  m&q    g27.7%
1986  mfg    g0.5%
1986  util   g10.1%
1986  con    g1.4%
1986  trh    g1.9%
1986  t&c    g2.0%
1986  b&f    g1.0%
1986  ser    g1.1%
```

4 - Decrease the growth rates of each sector and make them zero; the growth rates would then look like the following:

#PRD -- labor productivity

```
--          sector
--  year  code  productivity
1986  agr    g0%
1986  m&q    g0%
1986  mfg    g0%
1986  util   g0%
1986  con    g0%
1986  trh    g0%
1986  t&c    g0%
1986  b&f    g0%
1986  ser    g0%
```

5 - Save the file after the changes by using the Norton Editor as follows:

press: F3

then press: E

6 - Make an edit to the file by giving the following command:

**medit exer2 -des nofile -dma nofile**

If the results of the edit has errors look at your errors in the file exer2.oe by using the Norton Editor by giving the following command:

**ne exer2.oe**

Correct the errors in the input data file exer2.dmr and exit with save by pressing:

**F3** and then **E**

Continue to do these steps each time you have errors until you have zero errors.

7 - When you have no errors, do the simulation (i.e., projection) for six years by using the following command:

**msim exer2 1986 6 -yes mrm**

If the results of the simulation have errors look at the errors in the file exer2.os by using the Norton Editor by giving the following command:

**ne exer2.os**

Correct the errors in the input data file exer2.dmr and exit with save by pressing:

**F3** and then **E**

Continue to do these steps each time you have errors until you have zero errors.

8 - When you have no errors in the simulation, produce table employment by sector and year (ESY) for the base year 1986 and the target year 1991 by giving the following command:

**mreport exer2 esy 1986 1991**

9 - Look at the ESY table using the Norton Editor by giving the following command:

**ne exer2.or**

10 - Compare the manpower requirements in ESY table that you just produced with ESY table before the changes in the base year 1986 and the target year 1991.

### Exercise 3

## INCREASING THE SECTORAL PRODUCTIVITY GROWTH RATES IN THE MANPOWER REQUIREMENTS MODEL

#### Purpose:

The purpose of this exercise is to show the effects of the increase in sectoral productivity growth rates on the manpower requirements.

#### Steps:

1 - Copy yar16a.dmr and give it another name as follows:

**copy yar16a.dmr exer3.dmr**

2 - Look at the contents of the file; exer3.dmr by using the Norton Editor as follows:

**ne exer3.dmr**

3 - Use the down arrow to go to the sectoral labor productivity, you will see the following data item:

#PRD -- labor productivity

| -- | sector |                   |
|----|--------|-------------------|
| -- | year   | code productivity |
|    | 1986   | agr g1.7%         |
|    | 1986   | m&q g27.7%        |
|    | 1986   | mfg g0.5%         |
|    | 1986   | util g10.1%       |
|    | 1986   | con g1.4%         |
|    | 1986   | trh g1.9%         |
|    | 1986   | t&c g2.0%         |
|    | 1986   | b&f g1.0%         |
|    | 1986   | ser g1.1%         |

4 - Increase the growth rates of each sector by 2% so the growth rates would look like the following:

#PRD -- labor productivity

| -- | sector |                   |
|----|--------|-------------------|
| -- | year   | code productivity |
|    | 1986   | agr g3.7%         |
|    | 1986   | m&q g29.7%        |
|    | 1986   | mfg g2.5%         |
|    | 1986   | util g12.1%       |
|    | 1986   | con g3.4%         |
|    | 1986   | trh g3.9%         |
|    | 1986   | t&c g5.0%         |
|    | 1986   | b&f g3.0%         |
|    | 1986   | ser g3.1%         |

5 - Save the file after the changes by using the Norton Editor as follows:

press: F3

then press: E

6 - Make an edit to the file by giving the following command:

**medit exer3 -des nofile -dma nofile**

If the results of the edit has errors look at your errors in the file `exer3.oe` by using the Norton Editor by giving the following command:

**ne exer3.oe**

Correct the errors in the input data file `exer3.dmr` and exit with save by pushing:

**F3** and then **E**

Continue to do these steps each time you have errors until you have zero errors.

7 - When you have no errors, do the simulation (i.e., projection) for six years by using the following command:

**msim exer3 1986 6 -yes mrm**

If the results of the simulation have errors look at the errors in the file `exer3.os` by using the Norton Editor by giving the following command:

**ne exer3.os**

Correct the errors in the input data file `exer3.dmr` and exit with save by pressing:

**F3** and then **E**

Continue to do these steps each time you have errors until you have zero errors.

8 - When you have no errors in the simulation produce table employment by sector and year (ESY) for the base year 1986 and the target year 1991 by giving the following command:

**mreport exer3 esy 1986 1991**

9 - Look at the ESY table using the Norton Editor by giving the following command:

**ne exer3.or**

10 - Compare the manpower requirements in ESY table that you just produced with ESY table before the changes in the base year 1986 and the target year 1991.

## Results Comparison of Exercise 1, Exercise 2, and Exercise 3

The PSY tables produced in the three previous exercises and the original one without changes are shown below. After doing the exercises you should get the same results. Compare the manpower demand in each sector and the total in the four tables and explain the effects of the changes of output increase and productivity decrease and increase on the manpower demand.

### Employment Summary by Sector and Year for 1986-1991 (ESY)

(Original Run YAR16A, No Changes)

| Sector           | Year    |         |         |         |         |         |
|------------------|---------|---------|---------|---------|---------|---------|
|                  | 1986    | 1987    | 1988    | 1989    | 1990    | 1991    |
| agriculture      | 933500  | 845433  | 957518  | 969757  | 982154  | 994708  |
| mining and qu    | 6400    | 7999    | 9997    | 12494   | 15615   | 19516   |
| manufacturing    | 57800   | 62689   | 67991   | 73741   | 79978   | 86742   |
| utilities-ele    | 51400   | 53688   | 56077   | 58573   | 61179   | 63902   |
| construction     | 110700  | 114849  | 119153  | 123618  | 128250  | 133057  |

| total            | 1606200 | 1624498 | 1644160 | 1665313 | 1688102 | 1712698 |

Exercises on the Effects of  
Changes in the Efficiency Rates and  
Student Distribution Ratios on  
Enrollment in the  
Education Simulation Model

## Introduction

These exercises are designed to show the effects of various changes in efficiency rates and student distribution ratios on enrollment in the Education Simulation Model.

## Exercise 4

### CHANGING THE EFFICIENCY RATES

#### IN THE

### EDUCATION SIMULATION MODEL

#### (HIGHER PROMOTION RATE AND ZERO REPETITION RATE)

#### Purpose:

The purpose of this exercise is to show the effects of the higher promotion rates and zero repetition rates on enrollment. This exercise will also show how to use the ESM when data is not available for promotion and repetition separately. We can then use what is sometimes called the "apparent cohort" method where we assume the repeat rate or the dropout rate is zero. In this method the number of students in a class year is divided by the number of students in the previous class in the last year. In this exercise, changes will cover the elementary stage for boys, i.e., grd1 to grd6.

#### Steps:

1 - Copy yar16a.des and give it another name as follows:

**copy yar16a.des exer4.des**

2 - Look at the contents of the file; exer4.des by using the Norton Editor as follows:

**ne exer4.des**

3 - Use the down arrow to go to the efficiency rates, you will see the following data item:

```
#OR -- outcome rates
--          male,
-- course  female, promotion repetition dropout graduation transfer
-- year   code  or each   rate      rate      rate      rate      rate
1986   grd1    m         71%     18%     11%     0%     0%
1986   grd2    m         80%     10%     10%     0%     0%
1986   grd3    m         72%     17%     11%     0%     0%
1986   grd4    m         77%     13%     10%     0%     0%
1986   grd5    m         81%     9%      10%     0%     0%
1986   grd6    m         70%     5%      6%      19%     0%
```

4 - Add the value of repetition rate to promotion rate in each of these six courses and put the later as zero. Those rates will like the following:

```
#OR -- outcome rates
--          male,
-- course  female, promotion repetition dropout graduation transfer
-- year   code  or each   rate      rate      rate      rate      rate
1986   grd1    m         89%     0%     11%     0%     0%
1986   grd2    m         90%     0%     10%     0%     0%
1986   grd3    m         89%     0%     11%     0%     0%
1986   grd4    m         90%     0%     10%     0%     0%
1986   grd5    m         90%     0%     10%     0%     0%
1986   grd6    m         75%     0%     6%      19%     0%
```

5 - Save the file after the changes by using the Norton Editor as follows:

press: F3

then press: E

6- Make an edit to the file by giving the following command:

**medit exer4 -dmr nofile -dma nofile**

If the results of the edit has errors look at your errors in the file exer4.oe by using the Norton Editor by giving the following command:

**ne exer4.oe**

Correct the errors in the input data file exer4.des and exit with save by pressing:

first **F3**  
and then **E**

Continue to do these steps each time you have errors until you have zero errors.

7 - When you have no errors, do the simulation (i.e., projection) for six years by using the following command:

**msim exer4 1986 6 -yes esm**

If the results of the simulation have errors look at your errors in the file exer1.os by using the Norton Editor by giving the following command:

**ne exer4.os**

Correct the errors in the input data file exer4.des and exit with save by pressing:

first **F3**  
and then **E**

Continue to do these steps each time you have errors until you have zero errors.

8 - when you have no errors in the simulation, produce table enrollment by course and year (ECY) for the period 1986 - 1991 by giving the following command:

**mreport exer4 ecy 1986-1991**

9 - look at the ECY table using the Norton Editor by giving the following command:

**ne exer4.or**

10 - compare the boys enrollment in the primary courses in ECY table that you just produced with the same data in the ECY table before the changes in the base year 1986 and the target year 1991.

## Exercise 5

# CHANGING THE EFFICIENCY RATES IN THE EDUCATION SIMULATION MODEL (LOW PROMOTION RATE AND HIGHER REPETITION RATE)

### Purpose:

The purpose of this exercise is to show the effects of the low promotion rates and higher repetition rates on enrollment. This is usually the case in low efficiency systems. In this exercise, changes will cover the elementary stage for boys, i.e., grd1 to grd6.

### Steps:

1 - Copy yar16a.des and give it another name as follows:

**copy yar16a.des exer5.des**

2 - Look at the contents of the file; exer5.des by using the Norton Editor as follows:

**ne exer5.des**

3 - Use the down arrow to go to the efficiency rates, you will see the following data item:

```
#OR -- outcome rates
--          male,
-- course  female, promotion repetition dropout graduation transfer
-- year   code  or each   rate      rate      rate      rate      rate
1986   grd1   m          89%      0%      11%      0%      0%
1986   grd2   m          90%      0%      10%      0%      0%
1986   grd3   m          89%      0%      11%      0%      0%
1986   grd4   m          90%      0%      10%      0%      0%
1986   grd5   m          90%      0%      10%      0%      0%
1986   grd6   m          75%      0%      6%      19%     0%
```

4 - Double the value of repetition rate and deduct the increase from the promotion rate in each of these six courses. Those rates will look like the following:

```
#OR -- outcome rates
--          male,
-- course  female, promotion repetition dropout graduation transfer
-- year   code  or each   rate      rate      rate      rate      rate
1986   grd1   m          53%      36%     11%      0%      0%
1986   grd2   m          70%      20%     10%      0%      0%
1986   grd3   m          55%      34%     11%      0%      0%
1986   grd4   m          64%      26%     10%      0%      0%
1986   grd5   m          72%      18%     10%      0%      0%
1986   grd6   m          65%      10%      6%      19%     0%
```

5 - Save the file after the changes by using the Norton Editor as follows:

press: **F3**

then press: **E**

6 - Make an edit to the file by giving the following command:

**medit exer5 -dmr nofile -dma nofile**

If the results of the edit have errors, look at your errors in the file exer5.oe by using the Norton Editor using the following command:

**ne exer5.oe**

Correct the errors in the input data file exer5.des and exit with save by pressing:

first **F3**  
and then **E**

Continue to do these steps each time you have errors until you have zero errors.

7 - when you have no errors, do the simulation (i.e., projection) for six years by using the following command:

**msim exer5 1986 6 -yes esm**

If the results of the simulation has errors, look at the errors in the file exer1.os by using the Norton Editor by giving the following command:

**ne exer5.os**

Correct the errors in the input data file exer5.des and exit with save by pressing:

first **F3**  
and then **E**

Continue to do these steps each time you have errors until you have zero errors.

8 - When you have no errors in the simulation, produce table enrollment by course and year (ECY) for the period 1986 - 1991 by giving the following command:

**mreport exer5 ecy 1986-1991**

9 - Look at the ECY table using the Norton Editor by giving the following command:

**ne exer5.or**

10 - Compare the boys enrollment in the primary courses in ECY table that you just produced with the same data in the ECY table before the changes in the base year 1986 and the target year 1991.

**Exercise 6**

**CHANGING THE EFFICIENCY RATES  
IN THE  
EDUCATION SIMULATION MODEL  
(LOW PROMOTION RATE AND HIGHER DROPOUT RATE)**

**Purpose:**

The purpose of this exercise is to show the effects of the low promotion rates and higher dropout rates on enrollment. This is usually the case in low efficiency systems. In this exercise, changes will cover the elementary stage for boys, i.e., grd1 to grd6.

**Steps:**

1 - copy yar16a.des and give it another name as follows:

**copy yar16a.des exer6.des**

2 - look at the contents of the file; exer6.des by using the Norton Editor as follows:

**ne exer6.des**

3 - use the down arrow to go to the efficiency rates, you will see the following data item:

```
#OR -- outcome rates
--          male,
-- course  female, promotion repetition dropout graduation transfer
-- year   code  or each   rate      rate      rate      rate      rate
1986   grd1    m        71%      18%      11%      0%      0%
1986   grd2    m        80%      10%      10%      0%      0%
1986   grd3    m        72%      17%      11%      0%      0%
1986   grd4    m        77%      13%      10%      0%      0%
1986   grd5    m        81%      9%       10%      0%      0%
1986   grd6    m        70%      5%       6%      19%     0%
```

4 - Double the value of dropout rate and deduct the increase from the promotion rate in each of these six courses. Those rates will look like the following:

```
#OR -- outcome rates
--          male,
-- course  female, promotion repetition dropout graduation transfer
-- year   code  or each   rate      rate      rate      rate      rate
1986   grd1    m        60%      18%      22%      0%      0%
1986   grd2    m        70%      10%      20%      0%      0%
1986   grd3    m        61%      17%      22%      0%      0%
1986   grd4    m        67%      13%      20%      0%      0%
1986   grd5    m        71%      9%       20%      0%      0%
1986   grd6    m        61%      5%       12%     19%     0%
```

5 - Save the file after the changes by using the Norton Editor as follows:

press: F3

then press: E

6 - Make an edit to the file by giving the following command:

**medit exer6 -dmr nofile -dma nofile**

If the results of the edit has errors, look at the errors in the file exer6.oe by using the Norton Editor by giving the following command:

**ne exer6.oe**

Correct the errors in the input data file exer6.des and exit with save by pressing:

first F3  
and then E

Continue to do these steps each time you have errors until you have zero errors.

7 - When you have no errors, do the simulation (i.e., projection) for six years by using the following command:

**msim exer6 1986 6 -yes esm**

If the results of the simulation has errors, look at the errors in the file exer1.os by using the Norton Editor by giving the following command:

**ne exer6.os**

Correct the errors in the input data file exer6.des and exit with save by pressing:

first F3  
and then E

Continue to do these steps each time you have errors until you have zero errors.

8 - When you have no errors in the simulation produce table enrollment by course and year (ECY) for the period 1986 - 1991 by giving the following command:

**mreport exer6 ecy 1986-1991**

9 - Look at the ECY table using the Norton Editor by giving the following command:

**ne exer6.or**

10 - Compare the boys enrollment in the primary courses in ECY table that you just produced with the same data in the ECY table before the changes in the base year 1986 and the target year 1991.

**Exercise 7**

**CHANGING THE STUDENT DISTRIBUTION RATIOS**

**IN THE**

**EDUCATION SIMULATION MODEL**

**(INCREASING STUDENTS RATIO IN EDU13  
AND DECREASING THE RATIO IN LAWSH13)**

**Purpose:**

The purpose of this exercise is to show the effects of the changes in students admission ratios between the faculties of the university. In this exercise, we want to increase the ratio of students in Faculty of Education and reduce the ratio of Faculty of Law, where the base year 1986 ratios (45% Law and 20% Education) will be reversed by the year 1990.

**Steps:**

1 - Copy yar16a.des and give it another name as follows:

**copy yar16a.des exer7.des**

2 - look at the contents of the file; exer7.des by using the Norton Editor as follows:

**ne exer7.des**

3 - Use the down arrow to go to the promotion splitting rates, you will see the following data item:

#PSR -- promotion splitting rates

| -- | source | male,   | promotion |        |       |         |         |        |         |
|----|--------|---------|-----------|--------|-------|---------|---------|--------|---------|
| -- | course | female, | splitting |        |       |         |         |        |         |
| -- | year   | code    | or each   | rates  |       |         |         |        |         |
|    | 1986   | grd1    | m         | 100%   |       |         |         |        |         |

|    | 1986   | ptti7   | m         | 100%   |       |         |         |        |         |
|    | 1986   | ptti8   | m         | 100%   |       |         |         |        |         |
|    | 1986   | ptti9   | m         | 100%   |       |         |         |        |         |
|    | 1986   | ptti10  | m         | 100%   |       |         |         |        |         |
|    | 1986   | vtc7    | m         | 100%   |       |         |         |        |         |
| -- |        | gen10   |           | art11  | scil1 |         |         |        |         |
|    | 1986   | gen10   | m         | 45%    | 55%   |         |         |        |         |
|    | 1986   | art11   | m         | 100%   |       |         |         |        |         |
| -- |        | art12   |           | sptt13 | lib13 | busec13 | lawsh13 | edu13  |         |
|    | 1986   | art12   | m         | 0%     | 15%   | 20%     | 45%     | 20%    |         |
|    | 1990   | art12   | m         | 5%     | 10%   | 20%     | 45%     | 20%    |         |

4 - Go to the last line shown above and change the ratios in 1990 for the courses iawsh13 and edu13 to 20% and 45% respectively. Those ratios will look like the following:

|      | art12 |   | sptt13 | lib13 | busec13 | lawsh13 | edu13 |
|------|-------|---|--------|-------|---------|---------|-------|
| 1986 | art12 | m | 0%     | 15%   | 20%     | 45%     | 20%   |
| 1990 | art12 | m | 5%     | 10%   | 20%     | 20%     | 45%   |

5 - Save the file after the changes by using the Norton Editor as follows:

press **F3**  
then press **E**

6 - Make an edit to the file by giving the following command:

**medit exer7 -dmr nofile -dma nofile**

If the results of the edit has errors, look at the errors in the file `exer7.oe` by using the Norton Editor by giving the following command:

**ne exer7.oe**

Correct the errors in the input data file `exer7.des` and exit with save by pressing:

first **F3**  
and then **E**

Continue to do these steps each time you have errors until you have zero errors.

7 - When you have no errors, do the simulation (i.e., projection) for six years by using the following command:

**msim exer7 1986 6 -yes esm**

If the results of the simulation have errors, look at the errors in the file `exer1.os` by using the Norton Editor by giving the following command:

**ne exer7.os**

Correct the errors in the input data file `exer7.des` and exit with save by pressing:

first: **F3**

and then: **E**

Continue to do these steps each time you have errors until you have zero errors.

- 8 - When you have no errors in the simulation produce table enrollment by course and year (ECY) for the period 1986 - 1991 by giving the following command:

**mreport exer7 ecy 1986-1991**

- 9 - Look at the ECY table using the Norton Editor by giving the following command:

**ne exer7.or**

- 10 - Compare the boys enrollment in the Faculties of Education and Law in ECY table that you just produced with the same data in the ECY table before the changes in the base year 1986 and the target year 1991.

**Results Comparison of Exercise 4, Exercise 5, Exercise 6, and Exercise 7:**

The pcy tables produced in the four previous exercises and the original one without changes are shown below. After doing the exercises you should get the same results. Compare the enrollment in the primary grades for exercises 4, 5, and 6 with the original, i.e., without the changes and trace the effects of changing the efficiency rates on the enrollment by grade and the total. Do the same comparison with regards to exercise 7, trace the effects of changing the student admission ratios to the faculties of Education and Law on their respective enrollment by grade and total faculty.

Exercises on Starting a New Run  
for the  
Manpower Requirement Model

## Introduction

These exercises are designed to provide practice in beginning the Manpower Requirements Model run.

## Exercise 8

# STARTING A NEW RUN FOR THE MANPOWER REQUIREMENTS MODEL

### Purpose:

The purpose of this exercise is to start using the Manpower Requirements Model from the beginning. In this exercise we assume that we have only three sectors in the economy. These sectors are agriculture, mining and quarrying, and manufacturing. We are required to use the MRM to derive the manpower demand for these three sectors by occupation during the present Five-Year Plan period.

### Steps:

- 1 - There is a file that comes with the MEM called eg.dmr, you can use this file to start constructing the MRM by copying it under a different name as follows:

**copy eg.dmr**

and give it another name as follows:

**copy eg.dmr exer8.dmr**

- 2 - Look at the contents of the file exer8.dmr by using the Norton Editor as follows:

**ne exer8.dmr**

you will see that file eg.dmr has no data but the headings of the data item of the file.  
You are required to put the data under each heading by following these steps:

3 - Move the arrow down until you reach the data items in the file and then type the required information just by following the instructions in each data item.

#DESC -- data description  
-- description  
-- text

describe your work in here, for example, type **this run includes three sectors only**

#TITLE -- report title  
-- title  
-- text

type your name and date under this item

#UNITS -- units of output  
-- output  
-- units

**YEMENI RIYALS ('000s)**

#SEC -- economic sectors

-- sector                      sector  
-- code                         title

type in here the three sectors that included:

**agr                      agriculture and fishing**  
**m&q                     mining and quarrying**  
**mfg                      manufacturing**

#OCC -- occupation groups

-- occupation                      occupation  
-- code                              title

type in here the occupational groups we are using:

**A-1                      university science/math based professionals**  
**A-2                      university non-science/math based professional**  
**B-1                      science/math based technician with post-secondary**  
**B-2                      non-science/math based sub-professional with post-secondary**  
**C                         skilled and semi-skilled office**  
**D                         skilled and semi-skilled manual**  
**E                         semi-skilled requiring functional literacy plus OJT**  
**F                         unskilled requiring no special education or training**

#OUT -- sectoral output

-- sector

-- year code output

type in here the output of the three sectors in the base year 1986:

1986 agr 10680

1986 m&q 506

1986 mfg 4620

then type the growth rate of output in each sector during the projection period:

1987 agr g3%

1987 m&q g59.6%

1987 mfg g9%

#EMP -- sectoral employment

-- sector

-- year code employment

type in here the employment for each sector in the base year, 1986:

1986 agr 933500

1986 m&q 6400

1986 mfg 57800

#PRD -- labor productivity  
 -- sector  
 -- year code productivity

type the growth rate of productivity in each sector during the projection period:

|      |     |        |
|------|-----|--------|
| 1986 | agr | g1.7%  |
| 1986 | m&q | g27.7% |
| 1986 | mfg | g0.5%  |

#EDF -- employment distribution fractions  
 -- fraction  
 -- sector occupation of sector  
 -- year code code employment

type in here the occupational distribution (in percentages) within each sector:

|      |     |     |        |
|------|-----|-----|--------|
| 1986 | agr | A-1 | 0.07%  |
| 1986 | agr | A-2 | 0.04%  |
| 1986 | agr | B-1 | 0.39%  |
| 1986 | agr | B-2 | 0.04%  |
| 1986 | agr | C   | 0.30%  |
| 1986 | agr | D   | 0.20%  |
| 1986 | agr | E   | 0.40%  |
| 1986 | agr | F   | 98.56% |
| 1986 | m&q | A-1 | 1.00%  |
| 1986 | m&q | A-2 | 1.00%  |
| 1986 | m&q | B-1 | 1.00%  |
| 1986 | m&q | B-2 | 0.00%  |
| 1986 | m&q | C   | 1.50%  |
| 1986 | m&q | D   | 3.00%  |
| 1986 | m&q | E   | 5.60%  |
| 1986 | m&q | F   | 86.90% |

|      |     |     |        |
|------|-----|-----|--------|
| 1986 | mfg | A-1 | 0.40%  |
| 1986 | mfg | A-2 | 0.50%  |
| 1986 | mfg | B-1 | 0.80%  |
| 1986 | mfg | B-2 | 0.60%  |
| 1986 | mfg | C   | 3.00%  |
| 1986 | mfg | D   | 6.00%  |
| 1986 | mfg | E   | 12.00% |
| 1986 | mfg | F   | 76.70% |

4 - Save the file after the data entry by using the Norton Editor by pressing:

**F3** and then **E**

5 - Make an edit to the file by giving the following command:

**medit exer8 -des nofile -dma nofile**

If the results of the edit has errors look at the errors in the file exer8.oe by using the Norton Editor by giving the following command:

**ne exer8.oe**

Correct the errors in the input data file exer8.dmr and exit with save by pressing:

**F3** and then **E**

Continue to do these steps each time you have errors until you have zero errors.

6 - When you have no errors, do the simulation (i.e., projection) for six years by using the following command:

**msim exer8 1986 6 -yes mrm**

If the results of the simulation has errors look at the errors in the file exer8.os by using the Norton Editor by typing the following command:

**ne exer8.os**

Correct the errors in the input data file exer8.dmr and exit with save by pressing:

**F3** and then **E**

Continue to do these steps each time you have errors until you have zero errors.

- 7 - When you have no errors in the simulation produce table manpower requirements by sector and occupation (MRSO) for the projection years 1986 to 1991 by giving the following command:

**mreport exer8 mrso 1986-1991**

- 8 - Look at the MRSO table using the Norton Editor by giving the following command:

**ne exer8.or**

- 9 - Compare the results you have with the tables at the end of the section. If the figures are the same your work is correct. If your work is correct, use the Norton Editor to condense the MRSO tables you produced so they look like the tables included at the end of this section.
- 10 - Write down, on a separate sheet of paper, the data you needed to enter in the model and their sources, in addition to the assumptions you had to enter in the model.

## Exercise 9

### ADDING THE REST OF THE SECTORS

#### TO THOSE IN EXERCISE 8 IN THE MANPOWER REQUIREMENTS MODEL

##### Purpose:

The purpose of this exercise is to continue adding the rest of the sectors to those inputted in the Manpower Requirements Model in exercise 8. In this exercise we are required to use the MRM to derive the manpower demand for all the sectors by occupation during the present Five-Year Plan period.

##### Requirements and Steps:

In this exercise you are required to input the rest of the sectors of the economy to the three sectors included in exercise 8. You can follow the same steps detailed in exercise 8, but this time with respect to the newly added sectors.

In summary, you are required to:

- 1 - Copy the exercise(8 data file with the name of exercise 9.
- 2 - Use the Norton Editor to look at that file and to enter the data of the added sectors. The data you need to enter for these sectors are given to you at the end of this exercise.
- 3 - Save the file after the data entry by using the Norton Editor.

4 - Make an edit to the data file. If the results of the edit has errors look at the errors in the file exer9.oe by using the Norton Editor.

Correct the errors in the input data file exer9.dmr and exit with save.

Continue to do these steps each time you have errors until you have zero errors.

5 - When you have no errors, do the simulation (i.e., projection) for the six years 1986-1991.

If the results of the simulation has errors look at the errors in the file exer9.os by using the Norton Editor .

Correct the errors in the input data file exer9.dmr and exit with save.

Continue to do these steps each time you have errors until you have zero errors.

6 - When you have no errors in the simulation produce any table you choose from the output tables of MRM listed in handout 1 for the years 1986 to 1991.

7 - Look at the tables you produced using the Norton Editor and summarize them in condensed forms.

8 - Write down on a separate sheet of paper the data you needed to enter in the model and their sources, in addition to the assumptions you had to enter in the model.

Data to be entered in the data file exerc9.dmr (mentioned in step 2 above):

#SEC -- economic sectors

## Occupation Key

- A-1 university science/math based professionals
- A-2 university non-science/math based professional
- B-1 science/math based technician with post-secondary
- B-2 non-science/math based sub-professional with post-secondary
- C skilled and semi-skilled office
- D skilled and semi-skilled manual
- E semi-skilled requiring functional literacy plus OJT
- F unskilled requiring no special education or training

Exercises on Starting a  
New Run for the Education  
Simulation Model

Exercise 10

**STARTING A NEW RUN FOR THE  
EDUCATION SIMULATION MODEL**

**Purpose:**

The purpose of this exercise is to start using the Education Simulation Model from the beginning. In this exercise we assume that we have the six grades of primary boys in the educational system only. We are required to use the ESM to make educational projections for those six grades during the present Five-Year Plan period 1986-1991.

**Steps:**

1 - There is a file that comes with the MEM called eg.des, you can use this file to start constructing the ESM by copying it under a different name as follows:

**copy eg.des**

Give it another name as follows:

**copy eg.des exer10.des**

2 - Look at the contents of the file; exer10.des by using the Norton Editor as follows:

**ne exer10.des**

You will see that file eg.dmr has no data but the headings of the data item of the file.  
You are required to put the data under each heading by following these steps:

3 - Move the arrow down until you reach the data items in the file and then type the required information just by following the instructions in each data item.

```
#DESC -- data description
--      description
--      text
```

Describe your work in here, for example, type:

**this run includes six grades of primary for boys**

```
#TITLE -- report title
```

```
-- title
-- text
```

Type your name and date under this item.

```
#AGE - age range
-- minimum maximum
-- age    age
```

Type in here the age range of your education: system, in this case it is:

**5        15**

#TG -- teacher groups

-- teacher teacher  
-- group group  
-- code title

Define in here the teacher groups of the education system:

elem elementary

#CL -- course levels

-- course course  
-- level level  
-- code title

Define in here the education level of the system:

elem elementary

#COR -- courses

-- number males, teacher course  
-- course ideal of females, terminal group level course  
-- code age ages or both course? code code title

Type here the structure of the education system:

|      |    |   |   |   |      |      |        |
|------|----|---|---|---|------|------|--------|
| grd1 | 6  | 1 | m | n | elem | elem | grade1 |
| grd2 | 7  | 1 | m | n | elem | elem | grade2 |
| grd3 | 8  | 1 | m | n | elem | elem | grade3 |
| grd4 | 9  | 1 | m | n | elem | elem | grade4 |
| grd5 | 10 | 1 | m | n | elem | elem | grade5 |
| grd6 | 11 | 1 | m | y | elem | elem | grade6 |

#EC -- enrollment capacities

-- male,  
-- course female, enrollment  
-- year code or each capacity

This is an optional item, do not use it in this run.

#CPS -- cost per student

-- cost  
-- course per  
-- year code student

This is an optional item, do not use it in this run.

#STR -- student teacher ratios

-- students  
-- course per  
-- year code teacher

This is an optional item, do not use it in this run.

#OR -- outcomes rates

-- male,  
-- course female, promotion repetition dropout graduation transfer  
-- year code or each rate rate rate rate rate

Include in here the outcome rates of the system. Course (grd6) in here is considered terminal and its promotion rate should be added to the graduate rate.

|      |      |   |     |     |     |     |    |
|------|------|---|-----|-----|-----|-----|----|
| 1986 | grd1 | m | 71% | 18% | 11% | 0%  | 0% |
| 1986 | grd2 | m | 80% | 10% | 10% | 0%  | 0% |
| 1986 | grd3 | m | 72% | 17% | 11% | 0%  | 0% |
| 1986 | grd4 | m | 77% | 13% | 10% | 0%  | 0% |
| 1986 | grd5 | m | 81% | 9%  | 10% | 0%  | 0% |
| 1986 | grd6 | m | 0%  | 5%  | 6%  | 89% | 0% |

#PC - promotion courses

-- source promotion  
-- course course  
-- code code

In here you define the flow of the student in the system:

grd1    grd2  
grd2    grd3  
grd3    grd4  
grd4    grd5  
grd5    grd6

#PSR -- promotion splitting rates  
-- source male, promotion  
-- course female, splitting  
-- year code or each rates

In here you put the ratio of the flow of students from one course to the other:

|      |      |   |      |
|------|------|---|------|
| 1986 | grd1 | m | 100% |
| 1986 | grd2 | m | 100% |
| 1986 | grd3 | m | 100% |
| 1986 | grd4 | m | 100% |
| 1986 | grd5 | m | 100% |

#TC -- transfer courses  
-- source transfer  
-- course course  
-- code codes

This is an optional item, do not use it in this run.

#TSR -- transfer splitting rates  
-- source male, transfer  
-- course female, splitting  
-- year code or each rates

This is an optional item, do not use it in this run.

4 - Save the file after the data entry by using the Norton Editor by pressing:

**F3** and then **E**

5 - Make an edit to the file by giving the following command:

**medit exer10 - dmr nofile - dma nofile**

If the results of the edit has errors, look at the errors in the file exer10.oe by using the Norton Editor by giving the following command:

**ne exer10.oe**

Correct the errors in the input data file exer10.des and exit with save by pressing.

**F3** and then **E**

Continue to do these steps each time you have errors until you have zero errors.

6 - When you have no errors, do the simulation (i.e., projection) for six years by using the following command:

**msim exer10 1986 6 - yes esm**

If the results of the simulation have errors, look at the errors in the file exer10.os by using the Norton Editor by giving the following command:

**ne exer10.os**

Correct the errors in the input data file exer10.des and exit with save by pressing:

**F3** and then **E**

Continue to do these steps each time you have errors until you have zero errors.

7 - When you have no errors in the simulation, produce table enrollment by course and year (ECY) for the projection years 1986 to 1991 by giving the following command:

**mreport exer10 ecy 1986-1991**

8 - Look at the ECY table using the Norton Editor by giving the following command:

**ne exer10.or**

9 - Compare the results you have with the tables at the the end of the handout, if the figures are the same your work is correct.

10 - Write down on a separate sheet of paper the data you needed to enter in the model and their sources, in addition to the assumptions you had to enter in the model.

## Exercise 11

# ADDING THE INTERMEDIATE AND SECONDARY COURSES TO THE PRIMARY COURSES IN EXERCISE 10 IN THE EDUCATION SIMULATION MODEL

### Purpose:

The purpose of this exercise is to continue adding the intermediate and secondary courses input in exercise 10 in the Education Simulation Model. In this exercise we are required to use the ESM to make education projections for the primary, intermediate and secondary stages for boys during the present Five-Year Plan period 1986-1991.

### Requirements and Steps:

In this exercise you are required to input the rest of the intermediate and secondary courses for boys in addition to those of the primary that included in exercise 10. You can follow the same steps detailed in exercise 10 but this time with respect to the newly added courses.

In summary you required to:

- 1 - Copy the exercise 10 data file with the name exercise 11.
- 2 - Use the Norton Editor to look at that file and to enter the data of the added courses.

The data you need to enter for these courses are given to you at the end of this exercise.

3 - Save the file after the data entry by using the Norton Editor.

4 - Make an edit to the data file.

If the results of the edit has errors, look at the errors in the file exer11.oe by using the Norton Editor.

Correct the errors in the input data file exer11.des and exit with save.

Continue to do these steps each time you have errors until you have zero errors.

5 - When you have no errors, do the simulation (i.e., projection) for the six years 1986-1991.

If the results of the simulation has errors, look at the errors in the file exer11.os by using the Norton Editor.

Correct the errors in the input data file exer11.des and exit with save.

Continue to do these steps each time you have errors until you have zero errors.

6 - When you have no errors in the simulation produce any table you choose from the output tables of ESM listed in section 2 for the years 1986 to 1991.

7 - Look at the tables you produced using the Norton Editor and compare the results of table ECY with the table at the end of this section, if the figures are the same your work is correct.

8 - Write down on a separate sheet of paper the data you needed to enter in the model and their sources, in addition to the assumptions you had to enter in the model.

Data to be entered in the data file exerc11.des (mentioned in step 2 above)

#AGE -- age range

## Exercise 12

### **ADDING THE PRIMARY, INTERMEDIATE, AND SECONDARY GIRLS EDUCATION TO THE BOYS EDUCATION IN EXERCISE 11 IN THE EDUCATION SIMULATION MODEL**

#### **Purpose:**

The purpose of this exercise is to continue adding the girls education of primary, intermediate, and secondary to the boys education tables in exercise 10. In this exercise, you are required to use the ESM to make education projections for the primary, intermediate and secondary stages for the girls in addition to the boys education during the present Five-Year Plan period 1986-1991.

#### **Requirements and Steps:**

You can follow the same steps detailed in exercise 10, but this time with respect to the newly added girls courses. The information and data to be entered are found in section xx.

Table Produced in Exercise 10

Enrollment Summary by Course and Year for 1986-1991  
(ECY)

| Course            | Year   |        |        |        |        |        |

Exercise on  
Changing the Base Year  
from 1986 to 1988 in the  
Manpower Requirement Model

**Exercise 13**

**CHANGING THE BASE YEAR FROM 1986 TO 1988**

**IN THE**

**MANPOWER REQUIREMENTS MODEL**

**Purpose:**

The purpose of this exercise is to change the base year of the data file from 1986 to 1988 using new set of data in the Manpower Requirements Model.

**Steps:**

1 - Copy yar16a.dmr and give it another name as follows:

**copy yar16a.dmr exer13.dmr**

2 - Look at the contents of the file; exer13.dmr by using the Norton Editor as follows:

**ne exer13.dmr**

3 - Move the arrow down until you reach the data items in the file and then type the required information just by following the instructions in each data item.

#OUT -- sectoral output

-- end of data --

4 - Save the file after the changes by using the Norton Editor as follows:

press: **F3**  
then press: **E**

5 - Make an edit to the file by giving the following command:

**medit exer13 -des nofile -dma nofile**

If the results of the edit has errors look at the errors in the file exer13.oe by using the Norton Editor by giving the following command:

**ne exer13.oe**

Correct the errors in the input data file exer13.dmr and exit with save by pressing:

**F3** and then **E**

Continue to do these steps each time you have errors until you have zero errors.

6 - When you have no errors, do the simulation (i.e., projection) for six years by using the following command:

**msim exer13 1986 6 -yes mrm**

If the results of the simulation have errors look at the errors in the file exer13.os by using the Norton Editor by giving the following command:

**ne exer13.os**

Correct the errors in the input data file exer13.dmr and exit with save by pressing:

**F3** and then **E**

Continue to do these steps each time you have errors until you have zero errors.

7 - When you have no errors in the simulation produce table employment by sector and year (ESY) for the years 1988 - 1993 by giving the following command:

**mreport exer13 esy 1988-1993**

8 - Look at the ESY table using the Norton Editor by giving the following command:

**ne exer13.or**

9 - Exit from the Norton Editor by pressing:

**F3** and **E**

10 - Copy your input data file and your report on a disk by following these steps:

- Put a disk in the A drive.
- Give the following commands:

copy exer13.dmr a: < >

copy exer13.or a: < >

Then see the two files you just copied on the disk in the A drive by giving the following command:

dir a:

11 - Check your work by comparing the ESY table you produced with the following ESY table, if you have the same figures then your work is correct.

**Employment by Course and Year for 1983-1993  
(ESY)**

| Sector           | Year    |         |         |         |         |         |

Exercises on Changing  
the Base Year from  
1986 to 1988 in the Education  
Simulation Model

## Exercise 14

### CHANGING THE BASE YEAR FROM 1986 TO 1988

#### IN THE

#### EDUCATION SIMULATION MODEL

#### Purpose:

The purpose of this exercise is to change the base year of the data file from 1986 to 1988 using new set of data in the Education Simulation Model.

#### Steps:

1 - Copy yar16a.des and give it another name as follows:

**copy yar16a.des exer14.des**

2 - Look at the contents of the file; exer14.des by using the Norton Editor as follows:

**ne exer14.des**

3 - Move the arrow down until you reach the data items in the file and then type the required information just by following the instructions in each data item.

#OR -- outcome rates

-- male,  
 -- course female, promotion repetition dropout graduation transfer  
 -- year code or each rate rate rate rate rate

-- change the base year from 1986 to 1988

-- the data item will look like the following:

|      |        |   |     |     |     |     |    |

#PSR -- promotion splitting rates

-- source male, promotion  
-- course female, splitting  
-- year code or each rates

-- change in here the base year from 1986 to 1988

#TC -- transfer courses

-- source transfer  
-- course course  
-- code codes

#TSR -- transfer splitting rates

-- source male, transfer  
-- course female, splitting  
-- year code or each rates

#ENT -- entrants

-- male, number  
-- course entrant female, of  
-- year code age or each entrants

-- change the first projection year 1987 to 1989

-- the data item will look like the following:

|      |      |   |   |        |
|------|------|---|---|--------|
| 1989 | grd1 | 6 | m | 185585 |
| 1996 | grd1 | 6 | m | 267000 |
| 1989 | grd1 | 6 | f | 75000  |
| 1996 | grd1 | 6 | f | 134000 |

#NES -- persons not entering school

-- male, number  
-- female, not  
-- year age or each entering

-- change the base year from 1986 to 1988

-- the data item will look like the following:

|      |   |   |       |
|------|---|---|-------|
| 1988 | 6 | m | 20000 |
| 1996 | 6 | m | 0     |
| 1988 | 6 | f | 90000 |
| 1996 | 6 | f | 0     |

#ENR -- enrollments

-- male,  
-- course student female, number  
-- year code age or each enrolled

-- change the base year from 1986 to 1988  
-- change also the numbers for 1988 already provided  
-- the data item will look like the following:

|      |        |    |   |        |
|------|--------|----|---|--------|

-- end of data --

4 - Save the file after the changes by using the Norton Editor as follows:

press: F3

then push: E

5 - Make an edit to the file by giving the following command:

**medit exer14 -dmr nofile -dma nofile**

If the results of the edit has errors look at the errors in the file exer14.oe by using the Norton Editor by giving the following command:

**ne exer14.oe**

Correct the errors in the input data file exer14.des and exit with save by pressing:

**F3** and then **E**

Continue to do these steps each time you have errors until you have zero errors.

6 - When you have no errors, do the simulation (i.e., projection) for six years by using the following command:

**msim exer14 1986 6 -yes esm**

If the results of the simulation has errors look at the errors in the file exer14.os by using the Norton Editor by giving the following command:

**ne exer14.os**

Correct the errors in the input data file exer14.des and exit with save by pushing:

**F3** and then **E**

Continue to do these steps each time you have errors until you have zero errors.

7 - When you have no errors in the simulation, produce table enrollment by level and year (ECLY) for the years 1988 - 1993 by giving the following command:

**mreport exer14 ecly 1988-1993**

8 - Look at the ECLY table using the Norton Editor by giving the following command:

**ne exer14.or**

9 - Exit from the Norton Editor by pressing:

**F3** and **E**

10 - Copy your input data file and your report on a disk by following these steps:

- Put a disk in the A drive
- Give the following commands:

**copy exer14.des a: < >**

**copy exer14.or a: < >**

Then see the two files you just copied on the disk in a: drive by giving the following command:

**dir a:**

11 - Check your work by comparing the ECLY table you produced with the following ECLY table, if you have the same figures then your work is correct.

**Enrollment Summary by Course Level and Year for 1988-1993  
(ECLY)**

| Course Level |        | Year    |         |         |         |         |         |

Reference Section for the  
Manpower and Education Model

## Introduction

This section is prepared as a quick reference for basic operation of the Manpower and Education Model (MEM). It consists of descriptions of the data, definitions, and assumptions required by the three sub-models of the MEM. The inputs of the Manpower Requirement Model (MRM), Education Simulation Model (ESM), and Manpower Allocation Model (MAM) are listed in the same order as the three sub-models. A brief description of the data and assumptions regarding these inputs is also included along with identifying whether they are required or optional. Some of the inputs are optional in the ESM when included in the MRM and others are optional in the MAM when included in either MRM or ESM. Even within a sub-model some optional data become required when other optional items are used. The Program Reference Manual (vol.IV) of the MEM documentation contains more details on the input data, assumptions, and definitions.

## I. MRM: Manpower Requirement Model Input

| <u>Title</u> | <u>Type of data and assumption</u>   | <u>Opt/Req</u> |
|--------------|--|----------------|
| DESC         | data description   | required       |
| TITLE        | report title   | required       |
| UNITS        | units of output in national currency   | required       |
| SEC          | economic sectors:<br><br>defining the economic sectors of<br>the study   | required       |
| OCC          | occupation groups:<br><br>defining groups of occupations   | required       |
| OUT          | sectoral output<br><br>data needed:<br><br>1-base year output by sectors<br>2-growth rates of sectoral output<br>in production years | required       |
| EMP          | sectoral employment:<br><br>data needed:<br><br>base year employment of nationals<br>by sectors                                      | required       |

**PRD**

labor productivity:

required

data needed:

growth rates of sectoral productivity  
for projection years

**EDF**

employment distribution fractions:

required

data needed:

percentage distribution of occupation  
groups within each sector for the base year

## II. ESM: Education Simulation Model

|              |   |          |
|--------------|---|----------|
| <b>DESC</b>  | data description  | required |
| <b>TITLE</b> | report title  | optional |
| <b>AGE</b>   | age range: data needed:<br><br>1-minimum age: the lowest age in the<br>Educational and Training System (ETS)<br>2-maximum age: the highest age in the ETS | required |
| <b>TG</b>    | teacher groups:<br><br>defining groups of teachers<br>and their codes   | required |
| <b>CL</b>    | course levels:<br><br>defining the levels of<br>the ETS and their codes   | required |

**COR**

**courses:**

**required**

defining the structure of  
ETS system by listing:

1-courses (by their codes) of all ETS

2-ideal age of each course

3-number of ages in each course  
(age range covered)

4-identify the sex of each course  
(male or female)

5-identify whether the course is  
terminal or not (yes or no)

6-identify teacher groups  
corresponding to each course

7-list the course title that matches  
its code mentioned in one above

**EC**

**enrollment capacities: constraints  
on ETS capacities**

**optional**

**CPS**

**cost per student: cost per student is  
estimated for each course year.**

**STR**

**student teacher ratio: estimating  
student per teacher for every course  
and year.**

**optional**

**OR**

outcome rates: include rates of promotions, repetition, dropout, graduation and transfer:

required

data required:

1-rates of promotion, repetition and dropout for every course (grade and sex) of ETS in base year. Different rates can be used for projection years

2-flow of students between different levels of ETS (from terminal courses to other courses). Such data are necessary for estimating the graduate rate; i.e., the ratio of students who exit ETS from terminal courses.

3-information on student transfers among grades and levels to calculate the transfer rate

**PC**

promotion courses:

required

defining the flow of students from lower to higher grades and levels of ETS; i.e., identifying for every course the next level course or courses students will be promoted to

**PSR**

promotion splitting rates:

required

data required:

some data mentioned in OR number (2):  
historical data on number of students  
promoted from terminal courses and  
admitted in the next course or courses  
of ETS. Promotion splitting rates can  
be estimated on historical data and  
present policies of students admission

**TC**

transfer courses:

required

identifying the courses students  
transfer from and those courses  
students transfer to

**TSR**

transfer splitting rates:

required

estimating transfer rates among the  
transfer courses

**ENT**

entrants:

required

data required:

number of students entering the ETS  
(first grade) at the entering age by  
sex. This information is required for  
the base year and all projection years

**NES**

persons not entering school:

optional

data required:

number of children not entering  
the ETS by age and sex

**ENR**

enrollment:

required

data required:

number of students by grade and sex  
in all levels of the ETS and by age for  
students whose ages below the  
minimum working age. These data  
are needed for the base year.

### III. MAM: Manpower Allocation Model

|              |  |          |
|--------------|--|----------|
| <b>DESC</b>  | data description   | required |
| <b>TITLE</b> | report title   | optional |
| <b>UNITS</b> | units of output  | optional |
| <b>AGE</b>   | age range:<br>minimum and maximum age in<br>the simulation   | optional |
| <b>MWA</b>   | minimum working age:<br><br>defining the minimum working age<br>in the study   | required |
| <b>WP</b>    | waiting periods in time filters:<br><br>defining:<br><br>1-maximum number of years school<br>leavers wait before entering the labor<br>market (a form of unemployment for<br>nationals)<br><br>2-maximum number of years that<br>leaving workers wait before<br>reentering the labor market<br><br>3-maximum number of years that<br>out-migrants (national workers<br>leaving abroad) wait before returning<br>and reentering in the labor market | optional |

|             |  |          |
|-------------|--|----------|
| <b>COR</b>  | <p>courses:</p> <p>defining the courses: their codes and titles, ideal age and number of ages by sex</p>   | optional |
| <b>NAT</b>  | <p>nationalities:</p> <p>defining the nationalities of the expatriate workers</p>  | required |
| <b>SEC</b>  | <p>economic sectors</p>  | optional |
| <b>OCC</b>  | <p>occupation groups</p>   | optional |
| <b>POOL</b> | <p>labor pools:</p> <p>defining labor pools: identifying their codes and titles. Labor pools are the links between school leavers and the sector occupation matrix (SOM)</p> | required |
| <b>TO</b>   | <p>target sectoral output:</p> <p>can be used to:</p> <p>1-override sectoral output computed by MRM</p> <p>2-when MRM is not used</p>  | optional |

**TMR** target manpower requirements: optional

can be used to:

- 1-override sectoral manpower requirements computed by MRM
- 2-when MRM is not used

**IUSL** initial underage school leavers: required

data required:

school leavers who are under working age need to be calculated for the base year to specify the stock of manpower in that year. Leavers should be specified by grade, type (dropouts or graduates), age, and sex

**IWSL** initial working age school leavers: required

data required:

school leavers who are in working ages need to be calculated for the base year. Leavers should be specified by grade, type (dropouts or graduates), age, and sex

**NSL** new school leavers: optional  
students who left school at the end of the previous year by course, leaver status, age, and sex

**AWSL** additional working-age school leavers: optional

additional school leavers who are in working ages can be input for any number of years after the base year

**CUP** initial unschooled persons: required  
data required

number of persons who are not in school for the base year by age and sex. (Number of persons in a specific age: number of schooled + number of unschooled)

**NES** persons not entering school: optional

number of students who are not in school for any number of years, by age and sex. If this data is provided, they will override the corresponding NES data in ESM

**UPR** underage labor force participation rate: required

data required:

labor force participation rates for persons who are under the working age by year (at least base year), course, leaver status (dropouts or graduates), age, and sex

**WPR** working-age labor force participation rate: required

data required:

labor force participation rates for persons who are in the working ages by year (at least base year), course, leaver status (dropouts or graduates), age, and sex

**UPPR** unschooled persons participation rate: required

data required:

labor force participation rates for persons who are in working ages and not in school by year (at least base year), course, age, and sex

**SLP** school leaver labor pool assignment: required

assigning labor pools for school leavers (dropouts and graduates) of each course

**SLPAR** school leaver labor pool assignment rates: required

determining rates at which school leavers enter labor pool by course and year (at least base year)

**SLLR** school leaver lag rates: optional

defining how long school leavers of  
a given year, pool, and sex wait  
before entering the labor force

**IWWSL** initial waiting working-age school  
leavers: optional

calculating number of school leavers  
for the year prior to the base year  
who are waiting in the pools

**UPP** unschooled persons labor pool assignment: required  
like assigning the schooled persons to  
labor pools, persons not in school have  
to be assigned to labor pools

**UPPAR** unschooled persons labor pool assignment  
rates: required

rates at which unschooled persons  
enter labor pools

**INFL** initial national labor force: required

data required:

national labor force distributed by  
occupations within each sector for  
the base year only

**NFL**      national labor force:      optional

national labor force by occupation  
and sector for any year. Such data  
input will override the computed values  
for the corresponding years

**IELF**      initial expatriate labor force:      required

data required:

expatriate labor force distributed by  
occupations within each sector for  
the base year only

**ELF**      expatriate labor force:      optional

expatriate labor force by occupation  
and sector for any year. Such data  
input will override the computed  
values for the corresponding years

**NAR**      national attrition rates:      required

data required:

attrition rates of national workers  
by sector and occupation for the base  
year and/or any projection year

|             |  |          |
|-------------|--|----------|
| <b>EAR</b>  | expatriate attrition rates:  | required |
|             | data required:   |          |
|             | attrition rates of expatriate workers<br>by sector, occupation and nationality<br>for the base year and/or any projection<br>year  |          |
| <b>SOMP</b> | sector occupation mobility paths:<br>defining the labor movement in the<br>sector/occupation matrix; i.e., movement<br>from one occupation to another within<br>one sector, movement from one sector to<br>another within the same occupation, or<br>movement from one occupation to another<br>and from one sector to another | optional |
| <b>SOMR</b> | sector occupation mobility rates:<br><br>defining rates of labor transfer<br>within the sectors and occupations<br>and the year of transfer  | optional |
| <b>LP</b>   | leaker labor pool assignment:<br><br>defining the pools for the workers<br>who leak from certain occupations<br>and sectors  | optional |
| <b>LR</b>   | leaker labor pool assignment rates:<br><br>determining the rates of leaking<br>workers from the occupations and<br>sectors for a specific year   | optional |

**LLR**      leaker lag rates:      optional

determining the proportions of the leaking workers by the number of years each segment of the leakers has to wait before reentering the pools. This information has to be given at least for the base year

**IWL**      initial waiting leakers:      optional

determining the workers who leaked out of the pools in the year prior to the base year distributed by their waiting periods (in years)

**OMR**      outmigration rates:      optional

determining rates of outmigrant workers from sectors and occupations and by year. Outmigrants are assigned to their original pools when they return

**OMLR**      outmigration lag-rates:      optional

defining the duration of migration for the outmigrants; i.e., determining the number of years each segment of the returning workers has to wait before entering its original pool

|            |  |          |
|------------|--|----------|
| <b>IWO</b> | initial waiting outmigrants:<br><br>inputting number of outmigrants who have returned before the base year and have been waiting for different periods of time (in years) before entering their pools.   | optional |
| <b>LSP</b> | labor source pools:<br><br>defining the occupations and sectors for the workers in each pool   | required |
| <b>IPS</b> | initial pools stocks:<br>inputting stocks of workers in the labor pools for the year prior to the base year  | optional |
| <b>CTP</b> | changes to labor pools stocks:<br>inputting any additional stocks of workers for any year of the projection in the pools   | optional |
| <b>AF</b>  | allocation fraction:<br>determining the supply of workers allocation methods; i.e., the proportion of those allocated according to the demand (demand driven allocation) and those allocated according to the supply distribution (incidence related allocation) | required |

**TNF** target nationalization fraction: required  
  
determining the proportion of  
nationals targeted in the sectors  
and occupations for any given year

**MAP** national manpower allocation priorities: required  
  
determining the priorities of national  
workers concentration in sectors and  
occupations for any given year

**WIA** expatriate worker importation allowed: required  
  
determining the allowance or  
non-allowance of importing  
expatriate workers in any  
given year

## **Introduction**

The Manpower and Education Model (MEM) is an application running under PC-DOS or MS-DOS. In order to operate the model, the user is required to have knowledge of the Disk Operating System.

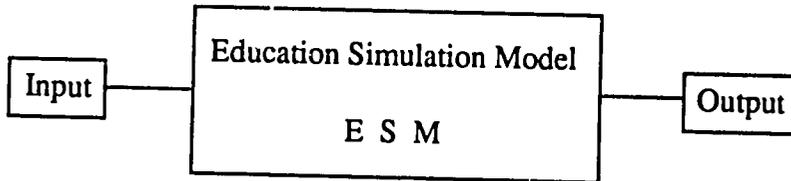

The purpose of this section is to provide the user with a summary of the necessary commands that are used for installing the Norton Editor and the MEM system; or organizing the hard disk and for running the Model (Exercises 1 and 2).

# Simplified Schema of the Manpower and Education Model.

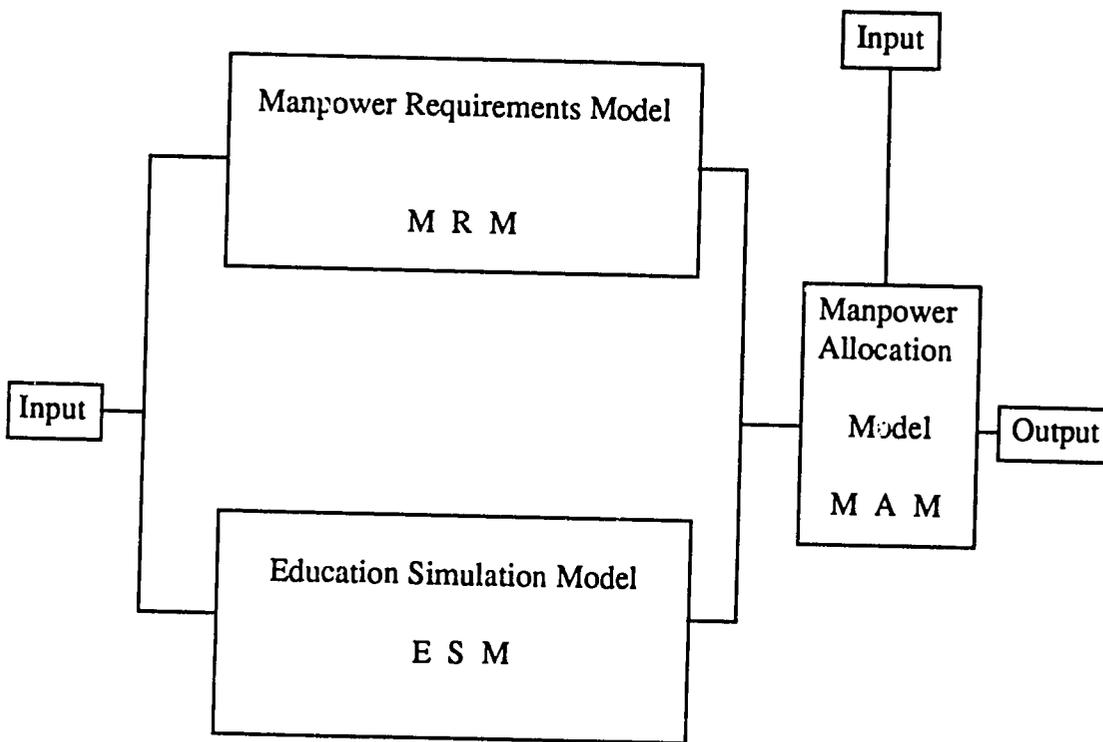

## The Manpower Requirements Model

## The Education Simulation Model

## The Manpower and Education Model

## Overview of the MEM Commands and Files

| Commands             | File Read<br>(input)                             | Files Produced<br>(output)  | Type  |
|----------------------|--|-----------------------------|-------|
| MEDIT simname        | simname.DMR (MRM data)                           | simname.OE (output report)  | Ascii |
|                      | simname.DES (ESM data)<br>simname.DMA (MAM data) | simname.MED (binary data)   | Ascii |
| MREFORM simname      | simname.MED                                      | simname.FMR (new MRM data)  | Ascii |
|                      |  | simname.FES (new ESM data)  | Ascii |
|                      |  | simname.FMA (new DMA data)  | Ascii |
|                      |  | simname.ORF (output report) | Ascii |
| MLIST simname        | simname.MED                                      | simname.OL (output report)  | Ascii |
| MSIM simname         | simname.MED                                      | simname.OS (output report)  | Ascii |
| MREPORT simname. MED | simname.OR (output report)<br>simname.MER        | Ascii                       |       |

The files, having the extensions MED or MER, because they are binary files, cannot be examined by using the Norton Editor. For this reason, the MEM system has provided the user with a special function, called QFILE, which makes it possible to obtain information about the contents of such files.

To examine the file simname.MED or simname.MER, enter the following command:

type: **qfile simname.mer**

or type: **qfile simname.med**

**NOTE:** (After using the function MREFORM, the MEM produces files with extension DMR, DES and DMA.) In order to run the MEM programs with the newly produced files, the user has to rename the file extensions by using the DOS command. For example:

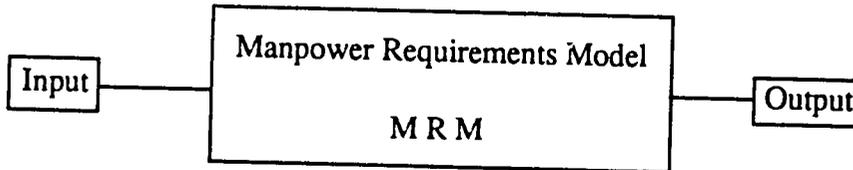

```

ren simname.fmr simname.dmr
ren simname.fes simname.des
rem simname.fma simname.dma .

```

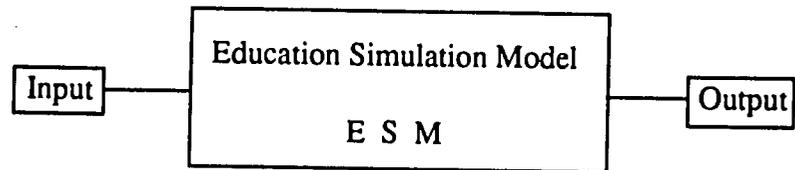

## The MEM Commands and Files

### The Manpower Requirements Model

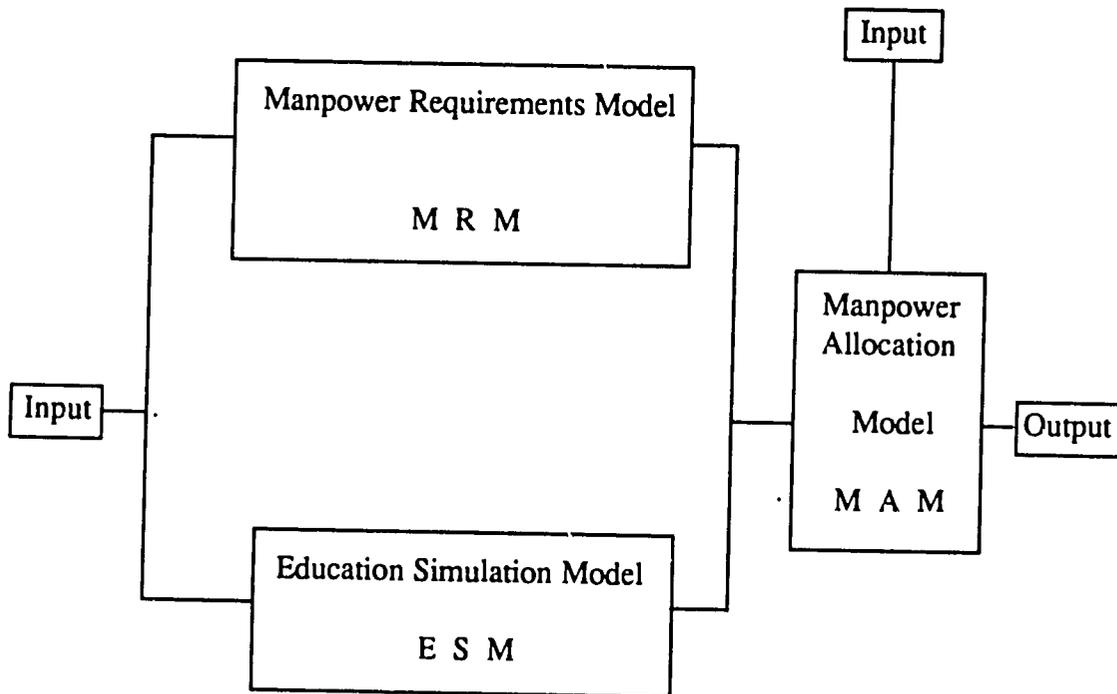

| Commands                                    | Files Read<br>(input)  | Files Produced<br>(output)  | Type                             |
|---|--|---|----------------------------------|
| MEDIT simname<br>-des nofile<br>-dma nofile | simname.DM? (MRM data)   | simname.OE (output report)<br>simname.MED (binary data)   | Ascii<br>Ascii                   |
| MEDIT simname                               | simname.DMR (MRM data)<br>simname.DES (ESM data)<br>simname.DMA (MAM data) | simname.OE (output report)<br>simname.MED (binary data)   | Ascii                            |
| MREFORM simname                             | simname.MED  | simname.OE (output report)<br>simname.FES (new ESM data)<br>simname.FMA (new DMA data)<br>simname.CRF (output report) | Ascii<br>Ascii<br>Ascii<br>Ascii |
| MLIST simname                               | simname.MED  | simname.OL (output report)  | Ascii                            |
| MSIM simname                                | simname.MED  | simname.OS (output report)<br>simname.MER (binary results)  | Ascii                            |
| MREPORT simname                             | simname.MED<br>simname.MER   | simname.OR (output report)  | Ascii<br>Ascii                   |

## The Education Simulation Model

| Commands                                    | Files Read<br>(input)  | Files Produced<br>(output)   | Type                    |
|---|--|--|-------------------------|
| MEDIT simname<br>-dmr nofile<br>-dma nofile | simname.DES (ESM data)   | simname.OE (output report)<br>simname.MED (binary data)                            | Ascii                   |
| MEDIT simname                               | simname.DMR (MRM data)<br>simname.DES (ESM data)<br>simname.DMA (MAM data) | simname.OE (output report)<br>simname.MED (binary data)                            | Ascii                   |
| MREFORM simname                             | simname.DED  | simname.FMR (new data)<br>simname.FES (new ESM data)<br>simname.FMA (new DMA data) | Ascii<br>Ascii<br>Ascii |
| MLIST simname                               | simname.MED  | simname.OL (output report)   | Ascii                   |
| MSIM simname.                               | simname.MED  | simname.OS (output report)<br>simname.MER (binary results)                         | Ascii                   |
| MREPORT simname                             | simname.MED  | simname.OR (output report)   | Ascii                   |

*The Manpower and Education Model*

| Commands        | Files Read<br>(input)  | Files Produced<br>(output)  | Type                             |
|-----------------|--|---|----------------------------------|
| MEDIT simname   | simname.DMR (MRM data)<br>simname.DES (ESM data)<br>simname.DMA (MAM data) | simname.OE<br>simname.MED (binary data)   | Ascii                            |
| MREFORM simname | simname.MED  | simname.FMR (new NRM data)<br>simname.FES (new ESM data)<br>simname.FMA (new MAM data)<br>simname.ORF (output report) | Ascii<br>Ascii<br>Ascii<br>Ascii |
| MLIST simname   | simname.MED  | simname.OL (output report)  | Ascii                            |
| MSIM simname    | simname.MED  | simname.OS (output report)<br>simname.MER (binary results)  | Ascii                            |
| MREPORT simname | simname.MED  | simname.OR (output report)  | Ascii                            |

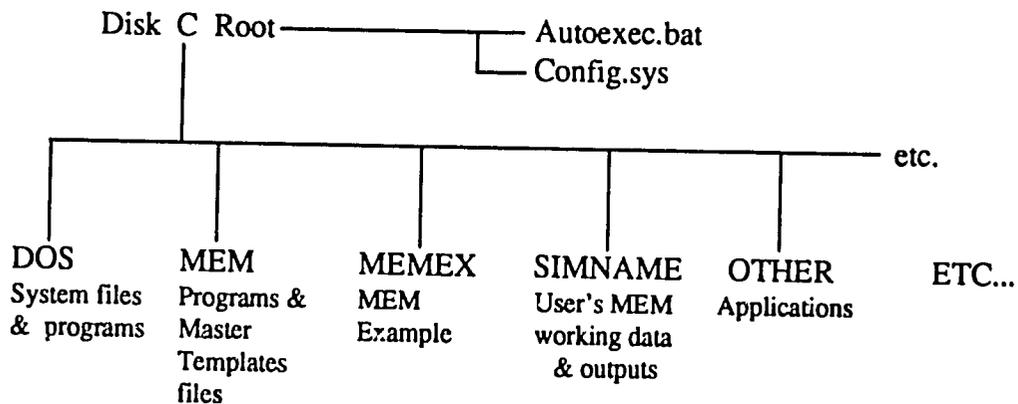

### *Running the MEM programs modules*

The steps are as follows:

- a. Turn the computer on.
- b. At the C:> prompt, move to the MEM subdirectory by entering the command: `cd\memex`
- c. Move to the MEMEX subdirectory to display the data file 'example', by typing: `cd\memex`
- d. Display the file, by typing: `dir`

### *DOS and the MEM System*

Special attention is given to organize data files using the subdirectory facilities of DOS. While this is not necessary for correct operations, it is, however, recommended for convenience purpose to have a disk arrangement for the MEM system similar to the one shown below:

### *Subdirectory Description*

|      |  |
|------|--|
| Root | Contains, among other files, the Autoexec.bat and Config.sys.        |
| DOS  | Contains the utilities offered by DOS (copy, delete, format etc...). |
| MEM  | Contains all the MEM program modules.                                |

## Establishing the PATH and the CONFIG.SYS.

The PATH is a command put in the Autoexec.bat file. To determine whether an AUTOEXEC.BAT file exists,

```
type:  cd\  
       dir
```

If no AUTOEXEC.BAT file exist, create one by typing the following steps:

```
type:  copy con autoexec.bat  
       path-c::c:\dos;c:\norton  
       F6
```

If there is an AUTOEXEC.BAT file, then enter the following command:

```
type:  auto exec.bat
```

the system displays.

```
path-c::c:\dos;c:norton;...
```

The subdirectory "mem" has to be added to the existing "Path" instruction. To do so, use the Norton Editor.

At the C> prompt, type:

```
ne autoexec.bat
```

Add the subdirectory 'mem' after the last subdirectory of the Path instruction:

```
Path-c::c:\dos;c:\norton;c:\mem;
```

Press F3 and the E to save the new path and end the session.

The CONFIG.SYS is a file used by DOS to allocate the number of files and buffers used by the system. The MEM programs require that the CONFIG.SYS should have:

**Files-20 and Buffers-10**

If no CONFIG.SYS file exists, create one by typing:

Type: **copy con config.sys**  
**files-20**  
**buffers-10**  
**F6**

If there is a CONFIG.SYS file then check that the value for Files-20 and Buffers-10. If not, use the Norton Editor to correct.

type: **ne config.sys**

Correct the values for files and buffers.

Press F3 and then E to save the new config.sys.

e. After changing the Path and the Config.sys, it is necessary to reboot the system before using the MEM programs.

To do so, press simultaneously the keys **Ctrl, Alt and Del.**

### *Command Summary*

Here is a summary of the commands the Norton Editor provides:

F1 - Help

F2 - Status

F3 - File commands

- E - *Exit*, save the data and end the edit session
- Q - *Quit*, discard the data and end the edit session
- S - *Save*, write the data to disk and continue editing
- X - *eXchange windows*, switch to other window
- N - *New*, edit a new file
- A - *Append* another file to end of edit data
- W - *Write* part of the data to disk
- L - *Load* more data from a large file
- C - *Close* the output file, open new output

F4 - Block commands

- S - *Set* a block marker
- R - *Remove* block markers
- D - *Delete* a block
- C - *Copy* a block
- W - *Window-to-window* block copy
- M - *Move* a block
- L - *Line*, mark and entire line as a block
- E - *End-of-line* mark to end-of-line as a block
- F - *Find* block marker

F5 - Screen format commands

- L - *Line length*, set line length
- W - *Word-wrap*, toggle on and off
- F - *Format* a paragraph
- T - *Tab*, set tab spacing
- I - *Indent*, toggle auto indent on and off
- C - *Cursor*, set cursor type
- D - *Display*, set display color
- S - *Save* editor with new defaults set
- K - *Key define*, change operation of *Tab* and *Ins* keys

F6 - Miscellaneous commands

- G - *Go to* a line number
- M - *Matching* punctuation, finds matching symbol
- C - *Condensed* display mode
- Ins- *Insert* mode cancel, switch to replace mode
- T - *Test* windows for differences

F7 - Printer commands

- P - *Print* entire edit buffer
- B - *Block*, print marked block
- E - *Eject* paper (form-feed)
- S - *Size* in lines per page
- M - *Margin*, set left margin for printing

## F9 - DOS Command Processor

### Other commands:

- F1 - *Help*
- F2 - *Status display*
- F9 - *DOS command processor*
- Ins - *Insert, switch to insert mode*
- ^U - *Undelete*
- ^F - *Find or find and-replace*
- ^C - *Continue find operation*
- ^P - *Insert control character*
- ^V - *Vice versa, flip upper and lowercase*

## Using the Norton Editor

### Search Commands

#### *"F" Means Find*

The search command in the Norton Editor is "F" for "Find." The direction of the search depends on the character typed before the F.

Alt F — search forward (down)

Ctrl F — search backward (up)

#### *Searching for Upper or Lower Case*

Whether the search is or is not "case sensitive" depends on the character typed after the search string. "Case sensitive" means that upper and lower case letters are considered to be different.

After typing the string to be searched for:  
press the < > key to search for the exact string, or  
press the Esc key to make the search case insensitive.

For example, if a character string in the file is ABCdef, a search for abcDEF would be unsuccessful if ended with < >. The string could only be found if ended with Esc.

#### *Continuing a Search*

After a search as been made, it can be continued. The command to repeat a search command is "C" for "Continue." The direction in which the search is continued depends on the character typed before the C.

Alt C —continue search forward (down)

Ctrl C — continue search backward (up)

**NOTE:** An easy way to remember in which direction the Find and continue commands work is that, on a normal PC keyboard, is located above the Alt key. So think of Ctrl as "Up" and Alt as "Down."

### *The String Recall Command*

If you need to reenter a find command you can bring back a previously entered search string by typing **Alt U** when prompted to "Enter String." You can then edit the search string.

## Exercise 1

In order to keep the original input data file "example" intact, make a copy for test purpose. Name the input data file "example1."

- e. To copy a file: (to a file of a different name)
- |                    |                                      |
|--------------------|--------------------------------------|
| for the MRM, type: | <b>copy example.dmr example1.dmr</b> |
| for the ESM, type: | <b>copy example.des example1.des</b> |
| for the MAM, type: | <b>copy example.dma example1.dma</b> |

- f. To examine the content of a file (input data) using the Norton Editor:
- |                    |                        |
|--------------------|------------------------|
| for the MRM, type: | <b>ne example1.dmr</b> |
| for the ESM, type: | <b>ne example1.des</b> |
| for the MAM, type: | <b>ne example1.dma</b> |

press F3, press Q Quit, discard the data and end the session  
answer YES to the prompt.

See the Norton Editor command summary.

- g. After making the printer ready, to Print the input data file of:
- |                |                           |
|----------------|---------------------------|
| the MRM, type: | <b>print example1.dmr</b> |
| the ESM, type: | <b>print example1.des</b> |
| the MAM, type: | <b>print example1.dma</b> |

**NOTE:** 'print' is a DOS command.

At this stage, you need to run the MEM program module to verify if all data are copied correctly.

- h. To run the MEM Edit program module:
- |                    |   |
|--------------------|---|
| for the MEM, type: | <b>medit example1</b>                         |
| for the ESM, type: | <b>medit example1 -dma nofile -dmr nofile</b> |
| for the MRM, type: | <b>medit example1 -dma nofile -des nofile</b> |

After editing, you run the MEM simulation Program by specifying the file name, the base year and the number of projection years.

- i. To run the MEM Simulation program module:
- |                    |                                      |
|--------------------|--------------------------------------|
| for the MEM, type: | <b>msim example1 1984 5</b>          |
| for the ESM, type: | <b>msim example1 1984 5 -yes esm</b> |
| for the MRM, type: | <b>msim example1 1984 5 -yes mrm</b> |

j. Producing the MEM Reports (result of simulation).

To produce all the reports (tables) for the projection years 1985 and 1986.  
type: **mreport example1 OSY 1985 1986**

To produce several reports (tables, e.g., MRSO and MROY) for the projection years 1985 to 1987.

type: **mreport example1 MRSO MROY 1984 1985 1986 1987**

k. Examining the data (tables) produced using the Norton Editor.

All the tables produced from the ESM, MAM and MRM is in "example1.or" files and to examine the tables you have already produced.

type: **ne example1.or**

l. To print the produced data (tables) you have just produced.

type: **print example1.or**

## Exercise 2

In this exercise, an input data file is modified and the whole process of editing, running the simulation and producing the reports is carried out.

- a. To make changes in an input data file, the file must be retrieved.

In order to do so, use the Norton Editor and:  
for the ESM, type: **ne example1.des**  
for the MAM, type: **ne example1.dma**  
for the MRM, type: **ne example1.dmr**

Using the Norton Editor commands to make the changes:

- \* before making the changes, position the cursor by using the four arrows.
- \* type the new data over the original data.
- \* save the new changes by pressing the **F3** key and then **S**.

At this stage, you need to run the MEM edit program module to verify that all changes are correct.

- b. To run the MEDIT program module (with the new changes).

After the changes, it is necessary to run this program:  
for the ESM, type: **medit example1.des**  
for the MRM, type: **medit example1.dmr**  
for the MEM, type: **medit example1**

After editing, you need to run the MEM simulation program module.

- c. To run the MEM Simulation:

for the ESM, type: **msim example1 1984 5 -yes ESM**  
for the MRM, type: **msim example1 1984 5 -yes MRM**  
for the MEM, type: **msim example1 1984 5**

- d. Producing the MEM Reports (results of simulation).

To produce all the reports (tables) for the projection years 1985 to 1988:

for the ESM, type: **mreport example1 alles 1985-1988**  
for the MRM, type: **mreport example1 allmr 1985-1988**  
for the MAM, type: **mreport example1 allma 1985-1988**

To produce a specific table (e.g., OSY) for the projection years 1985 and 1986.

type: **mreport example1 OSY 1985 1986**

To produce several reports (tables, e.g., MRSO and MROY) for the projection years 1985 to 1987.

**type: mreport example1 MRSO MROY 1984 985 1986 1987**

e. Examining the produced data (tables) using the Norton Editor.

All the tables produced from the ESM, MAM and MRM is in "example1.or" files and to examine the tables you have already produced.

**type: ne example1.or**

f. To print the produced data (tables) you have just produced.

**type: print example1.or**

### Exercise 3 - Norton Editor

#### Searching a string of characters

##### a. Searching Forward:

|                      |   |                         |
|----------------------|---|-------------------------|
| Enter the command:   | <b>Alt+F</b>                            | (remember to press < >) |
| The system displays: | <b>Searching Forward, Enter string:</b> |                         |
| Enter the string:    | <b>abcdef</b>                           | (press Esc)             |

example: Search for the string #CL in EXAMPLE1.DES

1. Call the file EXAMPLE1.DES To do so, type:

**NE EXAMPLE1.DES** < >

2. When the logo is displayed, press any key to display

3. Press **Alt+F** keys to invoke the Search command.

4. Enter the search string: **#cl**

5. Press Esc key.

## Exercise 4 - Norton Editor

### Searching Backward:

|                      |                                   |                  |
|----------------------|-----------------------------------|------------------|
| Enter the command:   | <b>Ctrl+F</b>                     | <b>&lt; &gt;</b> |
| The system displays: | Searching Backward, Enter string: |                  |
| Enter the string:    | <b>abcdef</b>                     | <b>Esc</b>       |

example: Search for the string **#CL** in **EXAMPLE1.DES**

1. Call the file **EXAMPLE1.DES** To do so, type:  
**NE EXAMPLE1.DES** **< >**
2. When the logo is displayed, press any key to display and press **Pg Dn** three times
3. Press **Ctrl+F** keys to invoke the Search command.
4. Enter the search string: **#cl**
5. Press **Esc** key.

## Exercise 5 - Norton Editor

### *Searching and replacing a string of characters*

#### Searching and Replacing: Forward

Enter the command: **Alt+F abcdef Alt+F ghijkl** (Press **Esc**)

answer: **Y** (to confirm replacement)

Enter the command: **Alt+F abcdef Alt+F ghijkl Alt+F \*** (press **Esc**)

**NOTE:** with **\*** all strings will be replaced.

example: Search and Replace the string **#COR** by **#abc** in **EXAMPLE1.DES**

1. Retrieve **example1.des** To do so, type:  
**NE EXAMPLE1.DES** <>
2. When the logo is displayed, press any key to display.
3. Press **Alt+F** keys to invoke the Search command.
4. Enter the search string: **#COR**
5. Press **Alt+F** keys to invoke the Replace command.
6. Enter the replacement string: **#abc**
7. Press **Esc** key.
8. Press **Y** to confirm replacement.

## Exercise 6 - Norton Editor

### Searching and Replacing: Backward

Enter the command: **Alt+F abcdef Alt+F ghijkl** (Press Esc)

answer: **Y** (to confirm replacement)

Enter the command: **Alt+F abcdef Alt+F ghijkl Alt+F \*** (press Esc)

**NOTE:** with \* all strings will be replaced.

example: Search and Replace the string #abc by #COR in EXAMPLE1.DES

1. Retrieve the file EXAMPLE1.DES. To do so, type:  
**NE EXAMPLE1.DES** <>
2. When the logo is displayed, press any key to display and press **Pg Dn** three times.
3. Press **Ctrl+F** keys to invoke the Search command.
4. Enter the search string: #abc
5. Press **Ctrl+F** keys to invoke the Replace command.
6. Enter the replacement string: #COR
7. Press **Esc** key.
8. Press **Y** to confirm replacement.

## Exercise 7 - Norton Editor

Copying a block from one window to another window.

1. Retrieve the first file: **ne example1.dmr** < >

2. Press **F3+X**.

The system displays a window.

3. Retrieve the second file: **example2.dmr** < >

4. Press **F3+X**.

The system cursor moves back to the top window.

5. Set a block marker at the beginning of the text and another block marker at the end of the block to be copied. To do so, position the cursor at the beginning of the block of text and press **F4+S**.

6. Move to the bottom window by pressing **F3+X**.

7. Position the cursor.

8. Press **F4+W**.

9. To quit without saving, press **F3 Q** and **Y**. Repeat to quit the second window.

10. To quit and save, press **F3+E**.
