# THE EMPOWERING SYSTEM: TOTAL EDUCATION SYSTEMS DEVELOPMENT

By Dr. Donald G. W. Schutte  
Curriculum Design & Educator Training Coordinator  
University of Nebraska at Omaha, Education Sector Support Project

July 1993

## Trainers Manual

\*4MAT IS REGISTERED TRADEMARK OF DERNICE MCCARTHY & CXCEL, INC.

## Principles of Learning

1. New learning is shaped by the learner's prior knowledge.
2. Much learning occurs through social interaction.
3. Learning is closely tied to particular situations.
4. Successful learning involves the use of numerous strategies.

Trainers Manual

Prologue

Relationship

by  
Donald G. W. Schutte

Neither cup nor tea  
contain the meaning.

It is tea-in-the-cup  
that makes the difference, but then  
neither is it tea-in-the-cup,  
but tea-in-the-cup-in-tilted-hand,  
moistening lips,  
flooding tongue,  
standing taste buds on end --  
scattering lightning patterns in waves  
across miles of brain cells;  
disappearing into the vortex,  
becoming biochemistry on the way  
to end spout and out again.

'Any-thing' is nothing except  
as relationship  
to 'every-thing'.

## FRIDAY NIGHT

by  
Prof. Khwaja Qutbuddin Najmi

FRIDAY NIGHT FRIDAY NIGHT FRIDAY NIGHT

Relatives get together.  
Everybody comes to my house.

Delicious food on Friday night.  
Tea, talk, and cookies on Friday night.

Everybody leaves at midnight.  
Time for ablution.  
I pray.

I have no gift to convey to my God --  
Only Afghan teardrops in my eyes.

Tears for the bloody present and the past,  
Tears for the unknown future,  
Tears for our brave, but martyred young,  
Tears for our crippled youth.

Tears for the shelterless orphans,  
Tears for children who missed their chance in life,  
Tears for the discord of our leaders,  
Tears for the carelessness of our scholars.

I believe the future will not be today.  
I will never lose my hope for tomorrow!  
I believe the future will not be today!

This is the promise of Almighty God.  
After darkness comes the light  
and we refugees will go home again.  
Filled with new knowledge,  
we will reconstruct Afghan education.  
We will give thanks for peace and freedom,  
thanks for a bright future  
bought with martyrs' blood.

FRIDAY NIGHT FRIDAY NIGHT FRIDAY NIGHT

Note: This poem was written as a part of an exercise to demonstrate the right-minded strategy of mind-mapping a 'whole' concept. The concept in this case was "Friday Night", a night that has special significance in Afghan culture. Prof. Najmi is a scientist and had never before written a poem.

The Empowering System:  
Total Education Systems Development

Trainers Manual

by  
Dr. Donald G. W. Schutte

Introduction

**Background:**

The Total Education Systems Development (TESD) process began its life when I was Chief of Teacher and Higher Education working as a UNESCO expert for the United Nations Relief and Works Agency in the Middle East. It began as a series of workshops run for Palestinian Teachers, Supervisors, and Key Educators in Jordan, West Bank, Gaza, Syria, and Lebanon. The purpose of these workshops was to introduce Palestinian refugee educators to planning lessons designed to teach learners content rather than teaching content to learners, i.e. to teach learners as well as the subject.

I introduced Bernice McCarthy's 4MAT as the lesson planning method. 4MAT is used to prepare lessons that cater to children with four learning styles and right-brain and left-brain hemisphere preferences. These learners are found in common classrooms worldwide. The 4MAT lesson planning system is more fully described in this Trainers Manual, but to understand how the Total Education Systems Development (TESD) process came to be and to understand the background of this Trainers Manual, I must briefly describe here McCarthy's 4MAT. 4MAT is a registered trademark of Bernice McCarthy and Excel, Inc. of Barrington, Illinois, USA. 4MAT is a play on the word 'format'. The 'MAT' in 4MAT has come to mean for those who use it, Most Appropriate Teaching Techniques.

4MAT takes the shape of a planning cycle divided into four quadrants and the lesson is planned to be presented to learners, moving clockwise from concrete experience, to reflective observation, to abstract conceptualization to active experimentation and, back again, to a more profound concrete experience.

4MAT's Right and Left Mindedness

The lesson is planned to appeal to all the four learning styles found in students in any classroom. Learners in each 'style' category are further subdivided into right-minded and left-minded types.

- 1) There are learners whose natural preference in any situation is to perceive their world first as concrete or abstract 'wholes'. They process these 'wholes' by reflective observation or active experimentation. Conceived meaning is found by examining the 'parts', seeing relationships between and among the parts and the whole. These learners are 'right-minded' learners. Though both brain hemispheres are at work in any situation, the right hemisphere of the brains of these learners dominate when they initially perceiving an impression from any situation in their environment.
- 2) There are learners whose natural preference in any situation is to perceive their world first as 'parts'. They process these perceived 'parts' by reflective observation or active experimentation, synthesizing the parts. Conceived meaning is in the 'whole' which grows out of the synthesis. These are the 'left-minded' learners. Though both hemispheres are at work in any situation, the left hemisphere of the brains of these learners dominate when they initially perceive an impression from any situation in their environment.

#### 4MAT's Four Learning Styles

- Quadrant 1: In the first quadrant, the lesson appeals to all, but those who will do best are the right-minded and left-minded **imaginative learners**. These learners tend to perceive the world first in concrete terms and then process their perceptions by reflecting on them. Teachers plan lessons for this quadrant that connect students personally to the information that is to be taught and that provide students with an opportunity to reflect upon or analyze and examine the personal meanings or relationships they have with knowledge and skills to be learned.
- Quadrant 2: In the second quadrant, the lesson appeals to all, but those who will do best are the right-minded and left-minded, **analytic learners**. These learners tend to perceive the world first in terms of abstract conceptualizations which they then process by reflecting upon them. Teachers plan lessons for this quadrant that help students to bridge from the personal conceptualization of the knowledge and skills to be taught to their broader meanings in the world outside themselves. It is at this point where the information to be learned is defined and presented in an organized manner that allows students to store it in the long-term memory for easy access and later use.
- Quadrant 3: In the third quadrant, the lesson appeals to all, but those who will do best are the right-minded and left-minded **common sense learners**. These learners tend to perceive the world first in terms of abstract conceptualization which they then process by active experimentation. Teachers plan lessons for this quadrant that provide students with a means to practice the defined givens of the previous lessons. But also teachers provide opportunity in this part of the lesson for a student to add something of themselves, beginning to relate the defined givens to applications of the newly learned knowledge and skills in their own lives.

Quadrant 4: In the fourth quadrant, the lesson appeals to all, but those who will do best are the right-minded and left-minded *dynamic learners*. These learners tend to perceive the world first in terms of concrete experiences which they then process by active experimentation. Teachers plan lessons for this quadrant which will help students to evaluate the newly learned knowledge and skills in terms of their practical applications in real life and to integrate this knowledge and these skills so as to practically use them in real life situations.

Now back to the story of TESD. The workshops I ran in the Middle East were named, *4MAT On 4MAT*. These workshops were planned to teach 4MAT using McCarthy's 4MAT framework. When it came time, in Quadrant 3, to practice and then add something of oneself to the defined givens of 4MAT, and in Quadrant 4, to evaluate 4MAT in terms of its practical uses and integrate it use into real life situations, I conceived TESD.

I realized that 4MAT could become the focus of much more than lesson planning: That it could be used as the 'flywheel' of development for a whole education system and that this was particularly needed in developing countries. A 'whole' system needs to answer five questions:

1. What knowledge and skills should be learned by students at which grade levels and stages of growth and development?
2. What methods, strategies and techniques should be used to teach all students so as to recognize differences in their learning styles and brain hemisphere preferences?
3. What methods, strategies and techniques should be used to assess whether learners are achieving specified learning outcomes and whether the teachers and materials are adequate to ensure expected achievement?
4. What methods, strategies and techniques should be used 1) to supervise and facilitate the work of head teachers (as resident supervisors of learning programs as well as manager in their schools), teachers, and students in order to ensure that the central ministry of education's established standards are maintained throughout the system and 2) to provide leadership in helping parents and community councils to maintain their roles as guardians of their children's educational opportunities?
5. What administrative and management methods, strategies and techniques should be used to ensure that all inputs and activities in the system are contributing to producing the culturally sensitive learning outcomes specified by the system?

The TESD process answers those questions by:

- a) helping local educators develop a culturally sensitive and relevant mission statement to guide (1) programs for students in school and (2) as a correlate, teacher education programs so they are directly related to student programs,
- b) developing a concept scope and sequence of what students should learn in each subject at each grade level;
- c) deciding for each concept what proposition, procedural and conditional knowledge and skills students with different learning styles and brain hemisphere preference should learn in each subject at each grade level;
- d) placing each concept at the center of the 4Mat wheel in order to develop (1) a lesson plan for the concept with its related topics and subtopics and (2) to set it out according to modern research-based pedagogical strategies and techniques appropriate to each quadrant.
- e) creating the instructional materials and aids and student texts necessary to implement the lesson plan and teachers guide;
- f) developing continuous assessment strategies, techniques and tools to evaluate whether learning outcomes specified in the lesson plan and teachers guide have been achieved;
- g) developing a system of supervision to facilitate teachers as they implement lesson plans and teachers guides as well as to train them to use TESD.
- h) developing a system to involve administrators and other key educators in the system in order to ensure that all inputs and activities contribute to the achievement of learning outcomes with children.

The birth of TESD had to await a gestation period, until, after my retirement from UNESCO. I was recruited by University of Nebraska at Omaha, first to help write the RFP that was presented to and eventually awarded by USAID to UNO and its consortia. The outline of the proposal as written was based on implementing the TESD process. This outline was elaborated in two policy papers written by me during a short-term consultancy in April and May of 1992 to the Educational Sector Support Project (ESSP) that was the forerunner of the present ESSP project.

Thus, the birth of TESD came in July, 1992 after I arrived in Peshawar, Pakistan, and began the work of implementation. The first stage of implementation was to set up a team of Specialist Facilitators (SF). They were to be responsible to transfer the TESD process to other trainers who would, in turn, transfer the process to head teachers and teachers inside Afghanistan. Specialist Facilitators were seen as responsible for fulfilling multiple roles: as trainers of trainers, facilitators, supervisors and resource persons. They were to be drawn from :

- a) Afghan educators recruited from human resources already available and established within UNO/ESSP. These included:
- i) persons drawn from members of the Education Center for Afghanistan (ECA). The ECA is comprised of persons belonging to the seven mujahudin political parties, headquartered in Peshawar, who were nominated by the parties as educators.
  - ii) persons drawn from members of the Master Teacher Trainer group. These are persons who were themselves trained in generic pedagogical techniques and who then conducted seminars to train teachers alleged to be teaching in mujahadin schools inside Afghanistan. These seminars took place on both sides of the Afghan-Pakistan border.
- b) other qualified Afghan educators who were available but not previously employed by UNO/ESSP.

I arrived on July 24 and began a workshop to train SF's on 29 July. This workshop has been in continuous 4 to 6 hour a day sessions since then, interrupted only by other three day orientation workshops in October, November and December and a ten week TESD Process Transfer workshop from April 24 to June 30, 1993. These workshops were run for Master Teacher Trainers and ECA personnel. Participants in the Specialist Facilitator continuous workshop have changed. Some persons were added and ECA personnel dropped out to attend to other duties.

Those in the original Specialist Facilitator training group are listed below.

1. \*Abdul Gheyas -- Lang. Group (Lang. & Lit. Fac)-- ECA
2. \*Eng. M. Omar Stana Lang. (Exten. Agr)-- ECA
3. Najibullah Jehanyar Soc. Stud.Group (Maths)-- MTT
4. Mia Shamsuduhu Sayeed Sci. Group (Lang. and Soc. Stud)-- MTT & I.G.A.
5. Zalmei Sherzad Soc.Stud.--UNO/ESSP M & Adm Spec.
6. \*Shah Mohammed Math group (Sci.)--ECA
7. M.Aref. Yadgari Maths group (Sci.)-- BEFARE
8. Khwaja Qutbuddin Najmi Sci-- Hd, Phys Dept, Dawat & Jihad University -- MTT
9. \*Gul Jan Wrar Wardak - Lang-- BEFARE (GTZ)
10. Abdul Ahmad Amuzgar Lang. (Dari) M.T.T.
- 11 \* M. Yousuf Jabar Khil Lang. (Pushtu)-- M.T.T. and Sr. TT Ass't
12. \*M. Zahir Nazm Sci.--ECA

Note \*Indicates dropped out because of other duties.

On August 18, 1992, I addressed a memorandum to Prof. Azimi, the Deputy Team Leader, concerning the number of persons needed to constitute an adequate team of Specialist Facilitators. It is quoted in part below.

Can we meet together ... to discuss EMIS matters as this relates to establishing the overall training distribution structure in order to ensure that we can meet the requirements set forth in the CONTRACT as set out in the charts revised by Gibson, Boardman, David, and Yourself?

We must identify the core group who are going to become the SPECIALIST FACILITATORS. I believe this group should eventually be composed of Specialists in each subject area as follows:

Language Arts: (3) Dari, (3) Pushtu, and (2) Other (English);  
Mathematics (4);  
Science, (4);  
Social Studies, (4);  
Educational Administration & Management (2);  
Educational Psychology (2); and  
Translators (4).

It is important that this group have a reasonable command of English since the development resources are largely in English and need to be studied and brought into Dari and Pushtu. Also to be certified as a SPECIALIST FACILITATORS (SFs) each SF must have passed through a training workshop with me. Each SF must have proved that he/she accepts and understands the holistic Total Education Systems Development Process which I have introduced in the ongoing workshop. He or she proves competence by 1) producing the expected product of the workshop, namely model teacher and learner materials and 2) that he can communicate the Systems Development Process to TRAINER FACILITATORS (TFs). SFs, therefore, become trainers of trainers (TFs) who will be located in regions and provinces..

To be certified as TRAINER FACILITATORS (TFs) must be competent to train 1) HEAD TEACHERS AS RESIDENT FACILITATORS (HTRFs), 2) TEACHER-LEARNER FACILITATORS (T-LFS) and 3) COMMUNITY EDUCATION DEVELOPMENT COUNCIL MEMBERS AS GUARDIANS. TFs must prove themselves in the same manner as SFs. The command of English, however, is not essential although desirable. (We should initiate an English language program for SFs and TFs.)

The total number of TFs needed depends on the number of geographic centers which are created. The number of centers depends on how many are necessary in order to cover all Afghanistan. The TFs will be located in these centers and responsible for Head Teachers, Teachers, and Community Councils in the schools designated as related to each center. We must decide if the training will be taken out to local sub-centers or participants will be brought into centers. We must know the number of teachers teaching in grades 1,2,3. This is the first category of Head Teachers, Teachers and Council Members to be trained by the TFs. Therefore, the number of TFs necessary to do the training will depend on the number of Head Teachers, Teachers, and Council Members to be trained and certified. TF groups will repeat the same specialization categories as the SF groups. It is clear as well that SFs will provide leadership in facilitating and evaluating the outcomes of the workshops conducted for Head Teachers, Teachers, and Council Members by TFs.

The Training Facilitators, mentioned above, were to be drawn from the ranks of Teacher Trainers, Master Teacher Trainers and ECA personnel.

Following is a list of the Phase I, three-day Orientation Workshops that were held between October and December, 1992. They were to be the first of a series of *train the trainer* workshops run to transfer the TESD process to Master Teacher Trainers and ECA Personnel.

Mixed MTT and ECA Group --- Quetta ----- October 26, 27, and 28/92  
 ECA Group ----- Peshawar ----- November 3, 4, and 5/92  
 ECA Group ----- Peshawar ----- November 19, 21, and 22/92  
 MTT Group ----- Peshawar ----- December 1, 2, and 3/92  
 MTT Group ----- Peshawar ----- December 15, 16, 17/92  
 Womens TT Group ----- Peshawar ----- November 8, 9, 15-18, 23, 24/92

I conducted these workshops with help from the Specialist Facilitators who translated and helped to explain in Dari and Pushtu their understanding of difficult points in the seminars. Dr. Ivalyn Van Every lectured in one two hour session in each of the men's seminars, explaining 4MAT using the overhead projector and transparencys copied from McCarthy's 4MAT materials.

By April of 1993, the Specialist Facilitator team had not yet reached its ideal strength. Only six of the original group remained. New members had been added sporadically as indicated by the dates below. This required constant reteaching of the TESD process, knowledge and skills which had already been covered by the group as well as teaching new knowledge and skills. Much of the reteaching was done by peers, Specialist Facilitators who had already undergone the training. It was left to me to polish and clarify points as necessary and provide new knowledge and skills daily.

When the TESD Transfer Workshop began in May the Specialist Facilitator group members were as follows:

Name	Subject	Date Joined Project	Comments
1. Mr. Abdul Ahmad Amouzgar	Language Arts	23 July 1992	+ prior ESSP
2. Prof. Khwaja Qutbuddin Najmi	Science	23 July 1992	+ prior ESSP
3. Mr. Najibullah Jehadyar	Social Studies	23 July 1992	+ prior MTT
4. Mr. Zalmel Shirzad	Social Studies	23 July 1992	Part Time
5. Mr. Mhmd Aref Yadgari	Mathematics	23 July 1992	1/10/92 Full Time BEFARE -- Transfer 1/10/92 prior MTT
6. Mr. Mia Shamsudduha Sayeed	Language Arts	28 July 1992	
7. Mr. Besmellah Alekozai	Language Arts	16 Sept 1992	
8. Prof. Mir Abdul Karim Nedai	Science	16 Sept 1992	
9. Mr. Jalat Khan Hekmaty	Social Studies	01 Oct 1992	
10. Mr. Abdul Karim Azizi	Mathematics	01 Nov 1992	
11. Dr. Aziz Ahmad Yusufzai	Social Studies	01 Dec 1992	
12. Dr. Sayed Kamal Bakhtari	Science	16 Dec 1992	
13. Mr. Sultan Aziz Sultani	Language Arts	16 Jan 1992	
14. Mr. Hasangul Banadawal	Language Arts	16 Feb 1992	

Daily 2 to 4 hour workshop sessions were held with this group using the ASCD videotape library to teach new strategies and tactics that were to be used within the scope of 4MAT and its learning styles. Further clarification of the TESD process was also made and a process flow chart was designed and translated

into Dari. Much understanding came from the translation sessions. It is this flow chart that is used in this Trainers Manual and which was used in the workshop

As soon as the TESD Flow Chart translation was completed, the plan was to produce a series of television tapes in English, Dari and Pushtu. These were to be used initially by Specialist Facilitators in the Transfer Workshops for Master Teacher Trainers and, later, by the MTT's acting as Training Facilitators in workshops held inside Afghanistan. This was intended to ensure that the TESD process was transmitted as a whole process.

Instead of producing the television series, the Team Leader asked that Transfer workshops be begun immediately and that these workshops produce instructional materials and student texts which could be tried out inside Afghanistan. It was also agreed to produce a Trainers Manual as a product of the workshop. It is this Manual which you have in your hand. Further it was agreed that initially participants in the workshop would be drawn from Science and Mathematics.

Thus a ten week workshop was planned to run from 24 April to 30 June with a week out for Eid holidays. The three Specialist Facilitators in Science and the two in Maths conducted the workshop for Master Teacher Trainers and ECA personnel. I wrote the Trainers Manual, working day and night and they translated by night and trained in 6 hour workshops during the day. It was ten gruelling weeks during the hottest season in Pakistan, but we did it. The Specialist Facilitators produced with the participants 23 Lesson Units in Science and Mathematics and together we produced the Trainers Manual. Specialist Facilitators in Social Studies and Language Arts kept busy during the Science and Mathematics workshop, helping to translate the Manual as it was produced.

The story of the Trainers Manual has been told above. It is divided into four parts.

Part I:

Part I is comprised of Chapters 1 through 6. Each Chapter is accompanied by the handouts mentioned in the text. Chapters 2-6 are developed on a 4MAT plan.

Part II:

Part II is comprised of the Flow Chart. This describes TESD as the step-by-step process which referred to throughout part I.

### Part III:

Part III is comprised of the Teachers Pedagogical Resource Book. It contains information which was taught by me in the two-week session on teaching strategies and techniques. This provides a sample of teaching strategies and techniques. The TPRB book needs to be further developed and used to ensure that Afghan children are educated in a proactive learning environment which honors their differences in learning styles and brain-hemisphere preference.

### Part IV:

Part IV is comprised of a list of participants and the lesson units they produced as a product of this workshop, using the TESD process described in Part I and Part II. It also contains two samples of units produced in science and two produced in Mathematics. In each case one is a group product produced as a result of the first four weeks of training and one is an individual product produced as a result of the last three weeks of training. Each individual was required to produce one lesson unit as proof of his mastery of TESD and the first step in being able to transfer the process to head teachers and teachers inside Afghanistan. These products will be taken inside Afghanistan to be tried out with Afghan children and revised as necessary.

When you review the sample lesson units, please note that the first few pages, Form 'O' follows the orientation of other pages in the manual. It is done in English as an index of what is included in the remainder of the Plan and Guide. To read the pages that follow Form 'O' you must turn the Manual upside down. These pages were prepared for Dari speakers who read from right to left.

### Part V:

Part V has yet to be completed. It is up to you to read and do and produce your own lesson units. May God Bless your efforts.

# THE EMPOWERING SYSTEM: TOTAL EDUCATION SYSTEMS DEVELOPMENT

## TRAINERS MANUAL

Donald G. W. Schutte

[FOR THE USE OF SPECIALISTS AND  
TRAINING FACILITATORS TO BE USED IN PRODUCTION WORKSHOPS  
TO TRANSFER THE TOTAL EDUCATION SYSTEMS DEVELOPMENT PROCESS  
TO TRAINERS, HEAD TEACHERS, TEACHERS, AND KEY EDUCATORS.]

1. READING OF THE KORAN AND OPENING WORKSHOP STATEMENTS
2. STATE AIMS AND GOALS OF WORKSHOP (Handout 2.1)

### AIMS:

The aim of this workshop is to introduce participants to the Total Education Systems Development Process. This process uses 4MAT as a means to focus the production process on the answers to the following five questions:

1. What do we want Afghan children and youth to learn and, therefore, what should be taught in each subject at each grade level? (The answer is contained in the development of a *Concept Scope and Sequence*.)
2. How do we teach selected concepts to all Afghan children regardless of differences in learning styles and brain hemisphere preferences?
3. How do we continuously evaluate and assess what is learned and taught?
4. How do we effect continuous supervision at all levels within the system?
5. How do we ensure that all inputs and activities in the educational system are directed towards achieving specified learning outcomes with young Afghans. Learning Outcomes, in turn, are expected in the long term to produce the specified social consequences that make up the society's purposes for providing public education.

### GOALS:

Teacher Trainers will be trained to use the Total Education Systems Development Process to achieve the following outcomes:

1. To define the idea of *Concept Scope And Sequence* and, guided by a Mission Statement, relate it to developing the Afghan educational system.
2. To select one concept from the agreed *Concept Scope and Sequence* and divide it into topics and subtopics relevant to a particular subject and appropriate grade level.
3. To develop the propositional, procedural and conditional knowledge and skills relevant to understanding the substantive content and structure of the selected concept (see 2, above) and its practical use.
4. To write a "Lesson Unit Guide" relevant to the selected concept and its related topics and subtopics using the 4MAT Model. This model incorporates advanced pedagogical and assessment methods, strategies, and techniques and honors:
  - a. the four learning styles of learners,
  - b. left or right brain hemisphere preferences of learners, and
  - c. the learners' ages and stages of growth and development at each grade level.
5. To create instructional materials and student texts and learning aids that support the teaching and learning of the selected concept as well as the advanced pedagogical and assessment methods, strategies, and techniques.
6. To demonstrate ability to transfer the TESD Process to Head Teachers (as Resident Facilitators), Teachers, and other Key Educators as a means of reconstructing the Afghan Educational System.

### 3. INDICATE NATURE AND PURPOSE OF THE RELATIONSHIP BETWEEN AND AMONG SPECIALIST FACILITATORS AND MTTs AS TRAINING FACILITATORS

#### WORKSHOP GROUPS:

The ultimate organizational and structural goal is to form teams of Trainers who are specialized in a subject area. An ideal team, therefore, will consist of one or more trainers specialized in Maths, one or more in Science, one or more in Social Studies, and one or more in Languages (Dari and Pushto).

Each team will be connected to Specialist Facilitators who will act as TESD process mentors, resource persons, and supervisors of the Trainers as they apply the training program in their field of specialization. The specialized teams will go inside Afghanistan to train head teachers and 'generalist' teachers. Ultimately, Trainers will also train Supervisors, School Management Personnel, and Community Council members.

Although teachers teach all subjects in the primary grades, it is essential that those who train the teachers be specialized to help teachers upgrade their knowledge of a) the specific academic content in each subject area and b) the pedagogical and assessment methods, strategies and techniques appropriate to the concepts and learners being taught. Specific training concerning what and how to teach and assess specific content at a particular grade level is the quickest way to upgrade a system currently employing unqualified or under qualified teachers and head teachers.

It is this specificity which will allow the development of rational systems of supervision and management. At present head teachers only see their role as school manager. They need to be trained as *resident supervisors* responsible to supervise the academic and professional work of the teachers under their authority. This specificity also will provide the basis for informing the community, through a community council, what to expect from the schools, their teachers and head teachers, so that the council can play its role as guardians of its children's education on behalf of the community.

#### 4. HAND OUT MISSION STATEMENT (Handout 4)

SEE INSTRUCTIONS ON HANDOUT 4. USE THINK-PAIR-SHARE STRATEGY AND IDENTIFY IT AS SUCH FOR TRAINEES. THIS IS A SPECIAL CASE WHERE TRAINER PREPARED ANSWERS ARE ON THE REVERSE OF THE QUESTION SHEET TO BE COMPARED BY PAIRS OF TRAINEES WITH THEIR INDIVIDUAL ANSWERS.. (HANDOUT 4.1 AND 4.1.1)

##### Question 1:

The Mission Statement is divided into two parts. Part one is a Mission Statement for Schools and Part 2 is a Mission Statement for Educator Training Programs. What is the relationship between the two parts?

##### Prepared Answer to Question 1:

Part 1 of the Mission Statement is a general guide to help decide what affective, cognitive, and psychomotor learning outcomes should be achieved with Afghan children. All inputs, activities and learning outcomes included in educator programs should be determined so as to promote achievement of specified learning outcomes with Afghan children. Therefore, educator training programs cannot stand alone but must be based on understanding what is to be taught to Afghan children who have different learning styles and brain hemisphere preferences in each subject at each grade level. In other words, to be effective, every statement in Part 2, the educator training program, must somehow be related to implementing some aspect of Part 1, the school's learning program for children.

##### Question 2:

Teachers teach lessons in a variety of subjects each day. These lessons cover many ideas, i.e., concepts, topics and subtopics. Is it necessary that 1.1.1, 1.1.2, and 1.1.3 (a) to (k) be covered in each lesson?

##### Prepared Answer to Question 2:

No! It is not necessary that every lesson implement every element of the Mission Statement. Every element, however, should have been addressed and implemented in each subject one or more times during each semester.

##### Question 3:

You have heard and understood the goals of this workshop. We hope both to transfer to you the Total Education Systems Development Process and at the same time end up with the production of Instructional Materials for Teachers and Students. Is this workshop, therefore, one means of implementing Part 2 of the Mission Statement?

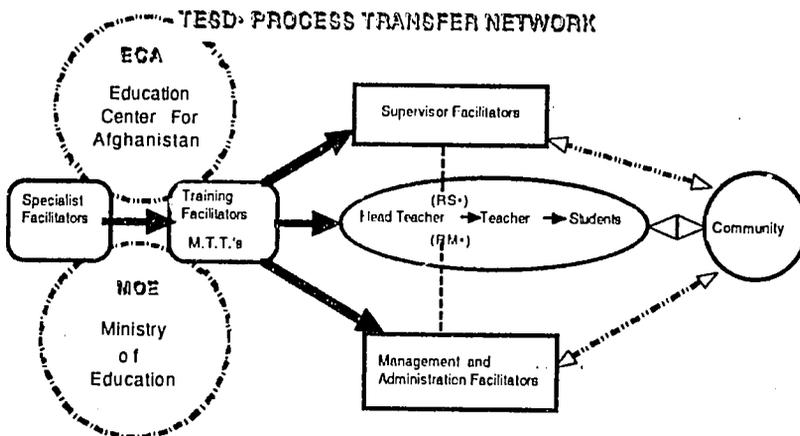

Yes! Success in this workshop will help you to expand your academic and professional knowledge at the same time you are improving instructional design and developing instructional materials for students and teachers. At the same time, the academic cognitive knowledge, skills, and procedures and the pedagogical methods, strategies and techniques employed in the course are based on the latest information and most advanced research available in the world today. In seeking the answers to the questions of 1) What to teach, 2) How to teach to children with different learning styles and brain hemisphere preferences, 3) How to assess and evaluate what is taught and learned, 4) How to Supervise, and 5) How to manage and administer an educational system ensures that the entire second part of the Mission Statement is being implemented within this workshop.

5. BRIEFLY REVIEW THE ASSUMPTIONS UNDERLYING THE UNO/ESSP PROJECT

Trainees should read the assumptions document outside the classroom on their own time. (Handout 5) Trainer presents the following orally.

Briefly, the assumptions that underlie the UNO/ESS PROJECT are :

- 5.1. that the Project works according to its Mission Statement. This Statement has been developed by and agreed upon by Afghans.
- 5.2. that the curriculum and instructional materials previously developed by the ECA in conjunction with UNO/ESSP are valid. They sustained the Afghan educational system during a distressing period of Afghan history. The present curriculum design and instructional materials development for students and teachers represent an effort to complement those efforts. Efforts to improve do not imply criticism. Improvements in design and materials must be seen, therefore, as going from good to better, not from bad to good. Nor is the emphasis in this workshop on specialist and training facilitators intended to exclude the participation and/or supervision of the ECA. All are welcome and all materials produced in this workshop will be submitted to the ECA for approval and therefore have the status of 'draft'.
- 5.3. that the quickest way to reconstruct the Afghan system of school education is to qualify and certify groups of teachers in terms of knowing what to teach, how to teach, and how to assess teaching and learning, first for grades 1 to 3, then 4 to 6, then 7-9, and finally 10-12.. Further, groups of head teachers must be trained to assume a role beyond school manager. This is the role of resident supervisor with the responsibility to supervise a) the academic content taught and learned in his school, b) the professional methods used by teachers, and c) the learning environment created by teachers under their authority
- 5.4. that training programs will involve transferring the Total Education Systems Development Process by way of production workshops having similar purposes and goals as this workshop (see Handout 2.1) through a network illustrated on Handout 5.1.

- Total Education Systems Development
- RS = Head Teacher as Resident Supervisor
- RM = Head Teacher as Resident Manager/Administrator

6. BRIEFLY REVIEW LEARNING STYLES AND BRAIN HEMISPHERE PREFERENCES AS A BASIS FOR 4MAT PLANNING AND PRODUCTION ACTIVITIES

LEARNING STYLE INVENTORY

1. Trainer says, "Every classroom contains learners with different learning styles and brain hemisphere differences. Research indicates that there are four possible learning styles and two possibilities for brain hemisphere differences".
2. Distribute face down Handout 6.1, Kolb's Learning Styles Inventory. Put the example item on the white board and demonstrate ranking their choices for each row from 4 to 1 with (4) meaning most like me, (3) meaning next most like me, (2) meaning next most like me, and (1) meaning least like me.
3. Have trainees turn the Learning Styles Inventory face up. Read the instructions with them. Ask if there are any questions. Give them five minutes to complete the inventory. Make sure they understand this is not a test and that there are no "correct" answers, only their own answers. This means the answers must be their own and not, repeat, not shared with their neighbors.
4. When everyone has completed the inventory, ask Trainees to find the sum of the numbers in each vertical column. Then to add the horizontal row of sums. The total of the sums in the row must be  $120 = (4 \times 12) + (3 \times 12) + (2 \times 12) + (1 \times 12)$ . If there is another sum look for errors in calculations or review each item to ensure that during ranking no number has been left out or used twice.

Column 1 = CE Column 2 = RO Column 3 = AC Column 4 = AE

5. Subtract (AE - RO). Plot result on the horizontal axis of the Learning-Style Type Grid.
6. Subtract (AC - CE). Plot result on the vertical axis of the Learning-Style Type Grid.
7. Trainer will tally on the board the number of participants in the Diverger Quadrant, the number in the Assimilator Quadrant, the number in the Converger Quadrant, and the number in the Accommodator Quadrant.
8. The tally (7 above) will demonstrate the principle that in almost every group, including this group, there are people who exhibit different styles of learning. (See principle stated in 1, above.)
9. What are Learning Styles?

People learn in different ways. These differences depend on many things:

1) who we are, 2) where we are, 3) how we see ourselves, and 4) what people ask of us.

10. There are two major differences in how people learn. Not everyone learns in the same way. The first difference in how people learn is caused by how they PERCEIVE ideas, things, people or situations. The second difference in how people learn is caused by how a person PROCESSES the information that is perceived. The way in which people perceive ideas, things, people, and situations, therefore, affects the way people behave when they process information or act upon and operate their world.

## 11. PERCEIVING:

Some people "sense or feel", others think things through. Those who usually approach life from the sensing, feeling direction connect information, experience, and meaning to their own person. They tend to get "inside" a concrete situation and perceive it from within themselves. They are intuitive and tend to perceive things as *concrete wholes* first and then act upon that perception.

Other people tend to "think through" an experience or see the *abstract dimensions* of their realities. They tend to stand "outside" a situation, treating it objectively without subjecting the experience to the biases within their own personality. They approach situations logically, letting their intellect appraise a situation. They tend to reason through an experience.

What about you? In a learning situation do you tend to "sense or feel" your way through or do you tend to "think through" the situation? Do you tend to get inside a situation and view it through your own personality or do you tend to stand outside a situation and try to view it objectively without involving your own personality. The particular way you favor most when perceiving new situations is a major determinant of your learning style. The perceiving orientation of your students is a major determinant of their learning styles as well. What about your spouse, your children, or memorable children you have taught? What do they do?

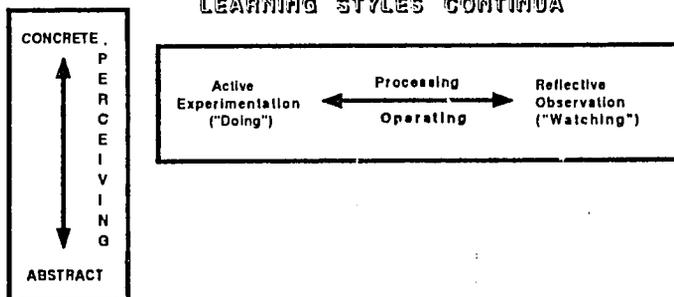

We want ALL STUDENTS, NOT JUST SOME STUDENTS, to learn. It is important, therefore, that we make lesson plans that incorporate both *concrete* and *abstract* ways of perceiving to match the ways which affect the learning styles of our students. Most teachers prepare lessons, however, that favor their own perceptive orientation. They give little or no thought or attention to ways in which others may perceive a situation. Remember the perception orientation which a student favors will affect their learning behavior in a particular situation.

Both ways of perceiving information, *concretely* or *abstractly* are equally valuable. They are only different.

((See Handout 6.2 which illustrates the Perception Continuum from CONCRETE at one extreme to ABSTRACT at the other extreme.))

((See Handout 6.2 which illustrates the Processing or Operating Continuum from REFLECTIVE at one extreme to ACTIVE at the other extreme. Processing is discussed below.))

Chapter 1: Handout 6.2 (Para 11- L.S.Continua & Para 13 -4MAT L.P. Cycle )

## 12.. PROCESSING:

The second major difference in how people learn is caused by how they process experience and information or how they take ownership of it by making it a part of themselves. The way people perceive affects the way they process.

When processing information, some people are "watchers" and others are "doers". When some people get new information or meet a new experience, they jump right in and try to do something with it. "Doers" act on new information immediately. They reflect on it only after they have tried it out. In order to make information their own, they need to use it, to extend it into their own world of reality. Others stand back, watch what is happening and reflect upon it. They tend to filter new things through their own experience, creating meaningful connections.

Both *reflective and active* processing are equally valuable. They are just different.

## 13. 4MAT Cycle (See Handout 6.2: 4MAT Lesson Plan Cycle)

When you place the two ways of perceiving and two ways of processing in a circle, allowing them to intersect at the center point with the concrete to abstract perception continuum on the vertical axis and the active to reflective continuum on the horizontal axis, you have constructed the 4MAT circle of learning styles.

In quadrant 1, you have the person who perceives experience concretely and stands back to watch and reflect upon that experience. Kolb, whose test you have taken, categorizes this type of person as a DIVERGER.

From Kolb's research, McCarthy developed a framework for planning lessons that would appeal to the four learning styles exhibited by learners. She calls these "feeling-watcher" persons, located in Quadrant 1, IMAGINATIVE LEARNERS. They perceive experience concretely and then process the information perceived by reflection. Their basic question is, "Why?", used in a personal sense of "Why is this concept or information important to me personally?" "Why should I know it?"

In quadrant 2, you have the person who perceives experience abstractly and stands back to watch and reflect upon it before taking overt action. Kolb categorizes this type of person as an ASSIMILATOR. McCarthy calls these "thinker-watcher" persons, located in Quadrant 2, ANALYTIC LEARNERS. They perceive experience abstractly and then process it by reflecting on it. Their basic question is, "What is the experience all about?" "Can I analyze it to make meaning of it?"

In quadrant 3, you have the person who perceives experience abstractly and immediately actively experiments with it or tries it out to see if it works. Kolb categorizes this person as a CONVERGER. McCarthy calls these "thinker-doer" persons, located in Quadrant 3, COMMON SENSE LEARNERS. They perceive experience abstractly and process by active experimentation. Their basic question is, "How can I use the experience of this concept?" "What is its practical value or applications?"

In quadrant 4, you have the person who perceives experience concretely and immediately actively experiments with it. Kolb categorizes this person as an ACCOMMODATOR. McCarthy calls these "feeling-doer" persons, located in Quadrant 4, DYNAMIC LEARNERS. They perceive experience concretely and immediately process by active experimentation. Their basic question is, "What can I make of this concept or experience?" "What can it become?"

See Handout 6.3a and Handout 6.3b. Use as basis for Think-Pair-Share discussion.

14. Each learning style is valuable! None is better than another. 4MAT is McCarthy's framework for planning lessons so that ALL students are provided with the Most Appropriate Teaching Techniques for teaching to different learning styles. She adds another factor, learning modes, to learning styles. Each style of learner may be either a "Right-Brained" Learner or a Left-Brained Learner. (4MAT is a registered Trademark owned by Excel, Inc., and Bernice McCarthy of Barrington, Illinois.)

15. RIGHT AND LEFT MINDEDNESS:

Distribute Handout 6.4, *Hemisphere Mode Indicators*. Follow the directions for taking the H.M.I. inventory. Put the example item on the board. Show trainees how to mark a circle under either column A or column B in one of the category spaces marked "a lot" or "somewhat". Give them 5 to 10 minutes to complete the test. When all have completed, have them place their scores from the scoring key within the circles and find the total for each column. Follow the directions to compute the difference between their "minus" numbers and "plus" numbers. Have them place their scores on the scale at the top of the page. Ask the trainees the following questions: "How many are "right-minded?" "How many are left-minded?" By tallying this on the board, it will be obvious that there are both right-minded and left-minded people in the room.

Review the list of Right/Left Mode Characteristics contained in Handout 6.4.

16. The way people prefer to perceive persons, places, things, or ideas affects their subsequent behavior or action. When one first perceives a person, place, thing or idea as a "whole", one's natural response is to take it apart or to analyze it in order to construct or expand its meaning. When one first perceives a person, place, thing or idea as a "series of parts", the natural response in constructing meaning is to make a synthesis or put the parts together to make a "whole".
17. TRAINERS WILL use the large picture puzzle (prepared by UNO/ESSP'S IMDC) to DEMONSTRATE THAT THE WAY ONE PERCEIVES AFFECTS THE WAY ONE PROCESSES INFORMATION OR ACTS UPON IT. When the picture is first perceived as a whole, the only action possible is to take it apart. When the pieces are first perceived as pieces of something, the only action possible is to put it together if one is to make sense of it.

18. Right-Minded People

People who are right minded prefer to perceive ideas, things, people, and situations as "wholes" first. Then they process the information taken as a whole by breaking it into its parts or analyzing it. This affects their learning style because they prefer to be presented new information as a whole first and then act upon it. To ensure that every pupil has a chance to learn, teachers should use pedagogical methods, strategies and techniques which appeal to "right-minded" students. Most teachers however use "left-minded" approaches which ignores the needs of "right-minded" students.

19. Left-Minded People

People who are left minded prefer to perceive ideas, things, people and situations in terms of their "parts" first. They then process the information taken in as parts by synthesizing it or putting it together to make "wholes". This way of perceiving and operating their world affects their learning style. They prefer that new information be presented in terms of its parts first and that it then be organized into "wholes". This is the approach most teachers use. "Right-minded" students suffer unless their needs as well as those of the "left-minded" students are taken care of in the same classroom.

20. Neither way of perceiving is superior to the other. Both are valid! Both right-minded and left-minded learners are found among students in each 4MAT learning style quadrant. Right and Left Mindedness becomes a part of each learning style. Thus, there are left and right minded learners in each style category: There are Imaginative Learners (Right and Left), Analytic Learners (Right and Left), Common Sense Learners (Right and Left), and Dynamic Learners (Right and Left.)
21. Trainers will review the Right/Left Mode cloth charts produce by IMDC and discuss the typical way in which the right and left brains function to perceive and integrate information. Also review with them Handout 6.5.
22. Bernice McCarthy's 4MAT Lesson Planning Model (Handout 6.3) illustrates the four learning styles and brain hemisphere preference which characterize the students in any ordinary classroom. We will see at a later stage in this workshop how the 4MAT model is expanded and used as a driving force within the Total Education Systems Development Process used by UNO/ESSP.
23. Trainers will take time to discuss the questions of the trainees concerning learning styles and brain hemisphere preferences. Trainers are reminded of the cloth visual aids which are available when discussing right and left mindedness. Use a think-pair-share strategy to elicit formulated questions from trainees.

**Bernice McCarthy On Mindedness**

Extracted from B. McCarthy: *The 4MAT System: Teaching to Learning Styles with Right/Left Mode Techniques*. Excel, Inc., Barrington IL.

The left and right hemispheres of the brain process information and experience differently.

**The left does verbal things.**

**The left likes sequence.**

**The left sees the trees.**

**The left likes structure.**

**Left brains love school.**

**The right brain does visual-spatial things.**

**The right likes random patterns.**

**The right sees the forest.**

**The right is fluid and spontaneous.**

**Right brains hang around school and hope they catch on.**

School teaches us not to trust our right mode of knowing; so our subsequent use of it makes us feel guilty, less rational, less intelligent. Whereas the reality is our virtually exclusive emphasis on the left mode makes us "stiff with techniques far from the scanning eye", constrained to miss the mystery.

It is not that our right mode stops functioning in school; it is just that our ability to hear it, to respond to it, to believe in it, suffers terrible neglect.

**The right mode sees relationships.**

**It grabs for the whole.**

**It draws the big circle.**

**It goes after the significant idea, the ideas that connect.**

(Content is relatively easy to master once it has been given a conceptual framework, a connection that makes meaning.)

While the left mode recognizes the relation of the new to the old, the right mode explores all the new material.

**Together they move toward wholeness.**

**Knowledge is not fragmented.**

**Knowledge is coherent and whole.**

How well we remember the things we learn depends on how well engaged both hemispheres were when we first learned it.

MISSION STATEMENT

AFGHANISTAN'S EDUCATIONAL MISSION TO  
YOUNG AFGHANS AND THEIR TEACHERS

This **Mission Statement** is intended as a general guide to help decide inputs and activities intended to achieve **specific learning outcomes** with young Afghans at each grade level in each subject area. These learning outcomes, in turn, serve to guide preservice and inservice training programs for teachers, head teachers, supervisors and other key educators and administrators.

Part 1: Mission Statement for Schools

- 1.1 The primary mission of Afghan schools is to equally prepare all Afghan children and youth as individuals living in a spiritual and material community: --
  - 1.1.1 To fully participate as Muslim citizens of the Islamic State of Afghanistan, imbued with a sense of jihad spirit with their Islamic Afghan identity and cultural heritage and sensitive to their individual rights and needs, while maintaining a sense of responsibility to balance their individual rights and needs with their responsibility to their family and community within a multi-cultural and global society in an effort to improve the quality of spiritual and material life for all based on Islamic principles.
  - 1.1.2 To fully participate as Islamic Afghan citizens of their local, provincial, national, and international communities with the competencies to contribute their full spiritual, personal, intellectual, and physical potential to face the uncertainties of the rapidly changing world of the 21st Century.
  - 1.1.3 To fully participate as Islamic Afghan citizens who:
    - a) are spiritually alert;
    - b) are Islamic value oriented;
    - c) are morally guided;
    - d) are directed toward a productive life in the future;
    - e) are competent in communication and problem-solving skills;
    - f) are skillful in the use of imaginative and critical thinking strategies and techniques;
    - g) are able to comprehend and use their knowledge of science and technology;
    - h) are aware of the beauty, heritage, and wisdom found in the study of the humanities and can appropriately apply this information;
    - i) are aware of their interdependence and the need to tolerate culture, races, and language differences among and between individuals and ethnic, social, and linguistic groups which make up the multi-cultural and global societies of which they are a part;
    - j) are alert to their need to develop and maintain the beauty and cleanliness of their surroundings;
    - k) are willing to contribute to the conservation of nature and preservation of the delicate balance between man and his environment.

## Part 2: Mission Statement for Educator Training Programs

2.1 Afghan inservice and preservice training institutions in the Islamic State of Afghanistan have a mission. It is related to the educational program of the schools. Their primary mission is to plan, organize, coordinate, implement, monitor, and evaluate training programs which efficiently and effectively use the limited resources available for education. These resources include personnel, time, space and facilities, books and materials, supplies and equipment, and finances as well as information input and feedback, including reputation. Training programs will assist educators to act intelligently on behalf of their clients, i.e., pupils, parents, trainees, practicing educators, and citizens of the community. Inservice and preservice training programs, therefore, should empower training course participants: ---

2.1.1 to continuously develop educational curricula and instructional materials, as well as their own academic and professional backgrounds, and to be able to teach or supervise and administer programs that facilitate teaching and learning.

2.1.2 to continuously improve pedagogical, assessment, and research methods, strategies, and techniques, as well as academic and pedagogical training programs by:--

a) giving attention to differences in learning styles of students;

b) promoting life-long learning and personal academic and professional growth;

c) building self-discipline; and

d) developing personal and professional sustaining values, attitudes, knowledge and skills.

The most important of these skills is how to think efficiently, how to learn effectively, and how to use what is learned for the benefit of self and others.

2.1.3 to continuously improve their own personal, academic, professional, and Islamic civic competencies and those of teachers, head teachers, supervisors, and other administrators through development training programs.

2.1.4 to continuously improve a support system with cooperation and understanding. This system is formed by establishing partnerships among and between schools, training centers, parents, and the general community. Special attention is to be paid in this regard to Community Education Councils.

CHAPTER 1: Handout 2.1 (Paragraph 2, p. 1)

AIMS AND GOALS OF WORKSHOP

AIMS:

The aim of this workshop is to introduce participants to the Total Education Systems Development Process. This process uses 4MAT as a means to focus the production process on the answers to the following five questions:

1. What do we want Afghan children and youth to learn and, therefore, what should be taught in each subject at each grade level? (The answer is contained in the development of a *Concept Scope and Sequence*.)
2. How do we teach selected concepts to all Afghan children regardless of differences in learning styles and brain hemisphere preferences?
3. How do we continuously evaluate and assess what is learned and taught?
4. How do we effect continuous supervision at all levels within the system?
5. How do we ensure that all inputs and activities in the educational system are directed towards achieving specified learning outcomes with young Afghans. Learning Outcomes, in turn, are expected in the long term to produce the specified social consequences that make up the society's purposes for providing public education.

GOALS:

Teacher Trainers will be trained to use the Total Education Systems Development Process to achieve the following outcomes:

1. To define the idea of *Concept Scope And Sequence* and, guided by a Mission Statement, relate it to developing the Afghan educational system.
2. To select one concept from the agreed *Concept Scope and Sequence* and divide it into topics and subtopics relevant to a particular subject and appropriate grade level.
3. To develop the propositional, procedural and conditional knowledge and skills relevant to understanding the substantive content and structure of the selected concept (see 2, above) and its practical use.
4. To write a "Lesson Unit Guide" relevant to the selected concept and its related topics and subtopics using the 4MAT Model. This model incorporates advanced pedagogical and assessment methods, strategies, and techniques and honors:
  - a. the four learning styles of learners,
  - b. left or right brain hemisphere preferences of learners, and
  - c. the learners' ages and stages of growth and development at each grade level.
5. To create instructional materials and student texts and learning aids that support the teaching and learning of the selected concept as well as the advanced pedagogical and assessment methods, strategies, and techniques.
6. To demonstrate ability to transfer the TESD Process to Head Teachers (as Resident Facilitators), Teachers, and other Key Educators as a means of reconstructing the Afghan Educational System.

Chapter 1 Handout 4.1 (paragraph 4)

THINKING ABOUT THE MISSION STATEMENT: QUESTIONS

INSTRUCTIONS:

1. You have 10 minutes to review the Mission Statement by reading it silently to yourself.
2. Before reading the Mission Statement, read Handout 4.1, entitled "Thinking about the Mission Statement: Questions."
3. As you read think about the questions and try to formulate an answer to each. You have another 10 minutes to think about and formulate your answers.
4. When you have formulated your answers to the questions, turn to the reverse side of Handout 4.1, labelled Handout 4.1.1 and compare your answers with the prepared answers.
5. Now discuss and compare your answers with the answers a person sitting next to you and, together, compare your answers with the prepared answers (Handout 4.1.1). Bring any further questions or discussion points you agree upon to the SF Trainer (10 Minutes)
6. SF Trainer will take your further questions and lead a large group discussion (10 Minutes)

[\*\* Note: This demonstrates a form of the Think-Pair-Share Strategy]

Question 1:

The Mission Statement is divided into two parts. Part one is a Mission Statement for Schools and Part 2 is a Mission Statement for Educator Training Programs. What is the relationship between the two parts?

Question 2:

Teachers teach lessons in a variety of subjects each day. These lessons cover many ideas, i.e., concepts, topics and subtopics. Is it necessary that 1.1.1, 1.1.2, and 1.1.3 (a) to (k) listed on Part 1 of the Mission Statement be covered in each lesson?

Question 3:

You have heard and understood the goals of this workshop. We hope both to transfer to you the Total Education Systems Development Process and at the same time end up with the production of Instructional Materials for Teachers and Students. Is this workshop, therefore, one means of implementing Part 2 of the Mission Statement?

THINKING ABOUT THE MISSION STATEMENT: ANSWERS

Question 1:

The Mission Statement is divided into two parts. Part one is a Mission Statement for Schools and Part 2 is a Mission Statement for Educator Training Programs. What is the relationship between the two parts?

Prepared Answer to Question 1:

Part 1 of the Mission Statement is a general guide to help decide what affective, cognitive, and psychomotor learning outcomes should be achieved with Afghan children. All inputs, activities and learning outcomes included in educator programs should be determined so as to promote achievement of specified learning outcomes with Afghan children. Therefore, educator training programs cannot stand alone but must be based on understanding what is to be taught to Afghan children who have different learning styles and brain hemisphere preferences in each subject at each grade level. In other words to be effective, every statement in Part 2 must somehow be related to implementing some aspect of Part 1.

Question 2:

Teachers teach lessons in a variety of subjects each day. These lessons cover many ideas, i.e., concepts, topics and subtopics. Is it necessary that 1.1.1, 1.1.2, and 1.1.3 (a) to (k) listed on Part 1 of the Mission Statement be covered in each lesson?

Prepared Answer to Question 2:

No! It is not necessary that every lesson implement every element of the Mission Statement. It would be impossible to do so! Every element, however, should have been addressed and implemented in each subject area one or more times during each semester.

Question 3:

You have heard and understood the goals of this workshop. We hope both to transfer to you the Total Education Systems Development Process and at the same time to end up with the production of Instructional Materials for Teachers and Students. Is this workshop, therefore, one means of implementing Part 2 of the Mission Statement?

Prepared Answer to Question 3:

Yes! Success in this workshop will help you to expand your academic and professional knowledge at the same time you are improving instructional design and developing instructional materials for students and teachers. At the same time, the academic cognitive knowledge, skills, and procedures and the pedagogical methods, strategies and techniques employed in the course are based on the latest information and most advanced research available in the world today. In seeking the answers to the questions of 1) What to teach, 2) How to teach to children with different learning styles and brain hemisphere preferences, 3) How to assess and evaluate what is taught and learned, 4) How to Supervise, and 5) How to manage and administer an educational system ensures that the entire second part of the Mission Statement is being implemented within this workshop.

## Chapter 1 : Handout 5 (paragraph 5)

### Basic Assumptions Underlying UNO/ESSP Educator Training Program

#### Overview

The goal of educator training programs is to improve the quality of student learning in schools by improving the academic and professional knowledge, skills, values and attitudes of teachers, head teachers and key educators. This is to be done through a system which implements current curriculum using approved textbooks and teacher guides. The system simultaneously promotes 1) curriculum development, 2) textbook and instructional aids development, 3) academic and professional development of instructional, supervisory, and administrative staff, and 4) the development of systems for assessing and evaluating personnel and program efficiency and effectiveness. Effectiveness is rated, in the short-term, by individual student and school group achievement of specified learning outcomes that prepare students to enter the world of work or higher levels of education. In the long-term, these outcomes must be studied and judgements made as to the impact the school programs (learning outcomes) have had on the social, economic, civic, and family life of the Nation.

#### Basic Assumptions

##### \*\*Basic Assumption 1:

It is assumed that there is an agreed Mission Statement. It is to be used as a general guide for deciding inputs and activities intended to achieve specified learning outcomes with young Afghans in each subject at each grade level. Further, it is assumed that these specified learning outcomes for school students will guide a) preservice and inservice training programs for teachers, head teachers, supervisors, and administrators and b) the development of instructional materials and assessment strategies. (Note: See Chapter 1, Handout 4 for the Mission Statement. This statement has been developed, approved to date by over 200 Afghan educators)

##### Basic Assumption 2:

It is assumed that what has been done up to the present by the Education Center for Afghanistan (ECA) in coordination with the Education Sector Support Project (ESSP) and the Afghan Education Authority (AEA) in terms of curriculum, books, and instructional aids development and teachers guides and educator training programs has provided a sound foundation for further cooperation and development.

##### Basic Assumption 3:

It is assumed that there is a quick way to further qualitative as well as quantitative development. The first step is to focus future development and training programs and activities on qualifying and certifying a cadre of teachers who are competent to produce specified learning outcomes with students in schools. Head teachers and teachers associated with grades 1-3 should be trained in a first round of workshops, then those associated with grades 4-6, then grades 7-9, then grades 10-12. This means deciding what concepts are to be taught in each subject at each grade level, beginning with grades 1-3 and moving consecutively in three grade segments to grade 12. These workshops should also focus on training educators to use the latest researched pedagogical strategies and techniques which give consideration to learning styles and brain-hemisphere preferences of learners.

##### Basic Assumption 4:

It is assumed that the specified learning outcomes will have been agreed and published in a *Concept Scope and Sequence* document and that a group of ECA, AEA, and ESSP personnel will work with consultants to analyze each concept to determine the topics and subtopics related to it that is appropriate to be taught at a specific grade level. Further it is assumed that for the concept and its related topics and subtopics research will be done and decisions made as to what propositional, procedural and conditional information should be learned by students as a minimum.

**Basic Assumption 5:**

It is assumed that having decided what should be taught and setting it out in a *Concept Scope and Sequence* document that decisions will be made concerning the appropriate methods, strategies and techniques to use to teach the specified concepts to students who differ a) by ages and stages of growth and development, b) by learning styles, and c) by being right or left brain hemisphere dominant.

**Basic Assumption 6:**

It is assumed that Bernice McCarthy's 4MAT Lesson Planning System provides the best framework within the Total Education System Development process to:--

- 1) map lessons,
- 2) apply a variety of teaching strategies and techniques that appeal to students with varying learning styles and brain hemisphere preferences, and
- 3) to develop instructional materials and teacher and student texts to support the strategies and techniques selected to teach the concept content.

**Basic Assumption 7:**

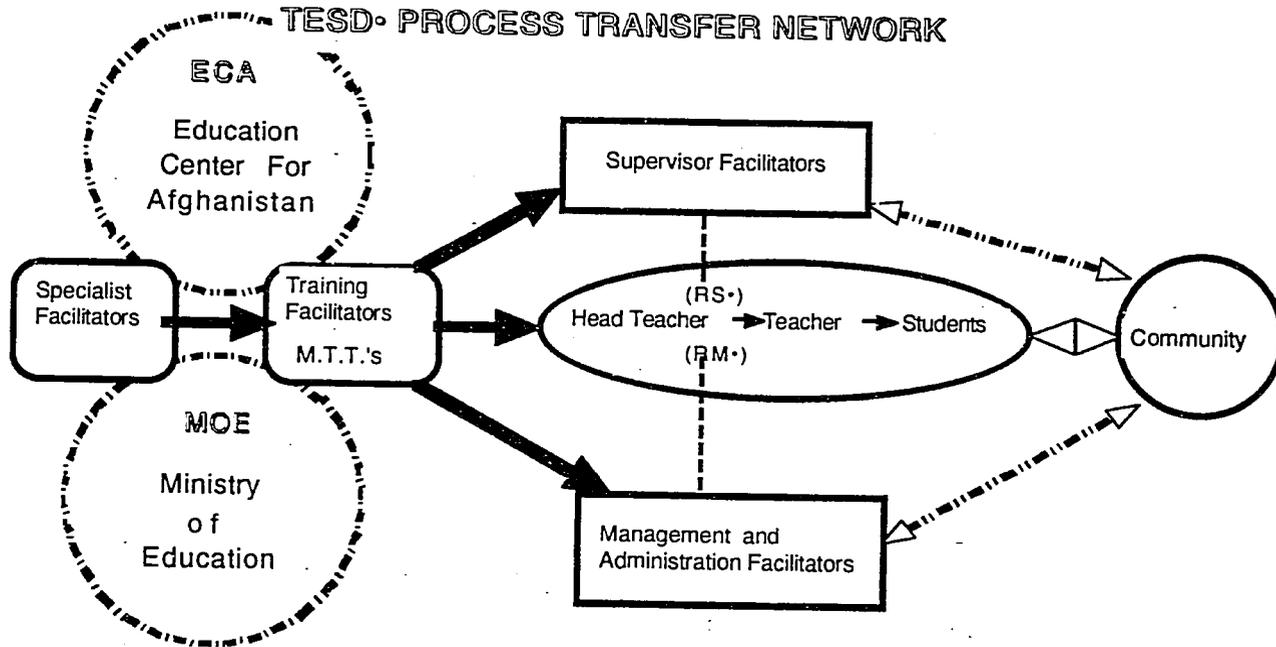

It is assumed that knowing what to teach and setting it out in a pedagogically sound 4MAT framework will include the assessment design to evaluate student achievement as well as teacher and school performance based on student achievement. Further it is assumed that by keeping records, an aggregate base can be stored to be used to establish purpose level indicators to judge whether the system is achieving the short-term outcomes and long-term social consequences it is supposed to achieve.

**Basic Assumption 8:**

It is assumed that the basic purpose of education activity is to produce students and teachers who can achieve the system's specified learning outcomes. Further it is assumed that the aforementioned activities provide the basis for efficient and effective administration and management. The clearly specified outcomes allow educational managers and administrators to combine inputs and activities to produce the wanted learning outcomes and social consequences.

**Basic Assumption 9:**

It is assumed that given the previously mentioned assumption, training and development workshops can be organized to offer training to a) trainers of trainers, b) head teachers, c) teachers, d) supervisors, e) other key educators and council members. The purpose of these workshops will be to help participants to understand and take as their own the principles, policies, processes and procedures necessary to implement reform and reconstruct the Afghan education system to provide quality education to all young Afghans.

- Total Education Systems Development
- RS = Head Teacher as Resident Supervisor
- RM = Head Teacher as Resident Manager/Administrator

# Learning-Style Inventory: Instructions

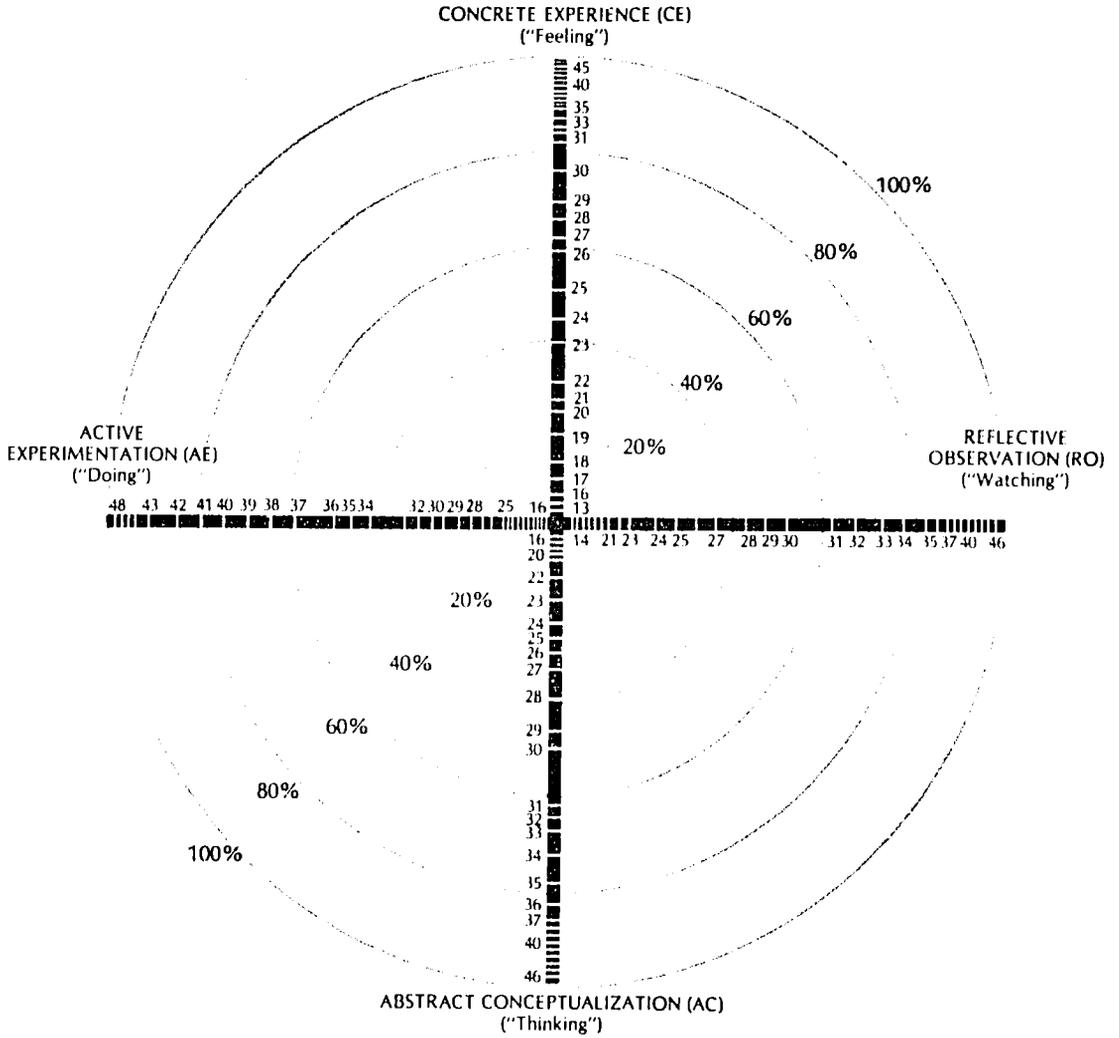

The Learning-Style Inventory describes the way you learn and how you deal with ideas and day-to-day situations in your life. Below are 12 sentences with a choice of four endings. Rank the endings for each sentence according to how well you think each one fits with how you would go about learning something. Try to recall some recent situations where you had to learn something new, perhaps in your job. Then, using the spaces provided, rank a "4" for the sentence ending that describes how you learn best, down to a "1" for the sentence ending that seems least like the way you would learn. Be sure to rank all the endings for each sentence unit. Please do not make ties.

**Example of completed sentence set:**

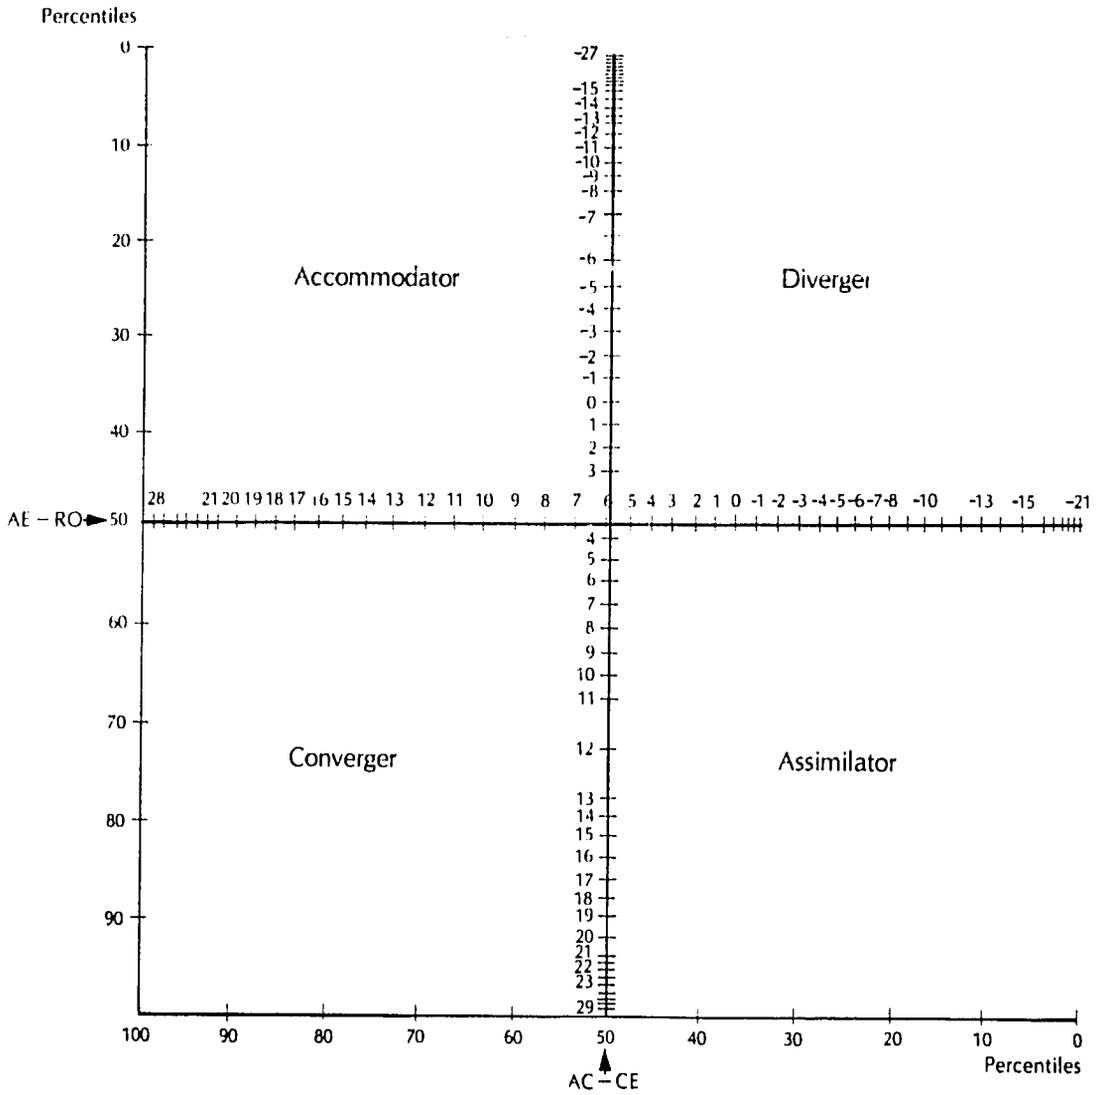

0. When I learn 4 I am happy      1 I am fast      2 I am logical      3 I am careful

- |                         |  |  |   |  |
|-------------------------|--|--|---|--|
| 1. When I learn         | <input type="checkbox"/> I like to deal with my feelings       | <input type="checkbox"/> I like to watch and listen    | <input type="checkbox"/> I like to think about ideas                                | <input type="checkbox"/> I like to be doing things           |
| 2. I learn best when:   | <input type="checkbox"/> I trust my hunches and feelings.      | <input type="checkbox"/> I listen and watch carefully. | <input type="checkbox"/> I rely on logical thinking.                                | <input type="checkbox"/> I work hard to get things done.     |
| 3. When I am learning   | <input type="checkbox"/> I have strong feelings and reactions  | <input type="checkbox"/> I am quiet and reserved       | <input type="checkbox"/> I tend to reason things out                                | <input type="checkbox"/> I am responsible about things       |
| 4. I learn by:          | <input type="checkbox"/> feeling.                              | <input type="checkbox"/> watching.                     | <input type="checkbox"/> thinking   | <input type="checkbox"/> doing.                              |
| 5. When I learn         | <input type="checkbox"/> I am open to new experiences          | <input type="checkbox"/> I look at all sides of issues | <input type="checkbox"/> I like to analyze things, break them down into their parts | <input type="checkbox"/> I like to try things out            |
| 6. When I am learning:  | <input type="checkbox"/> I am an intuitive person.             | <input type="checkbox"/> I am an observing person.     | <input type="checkbox"/> I am a logical person.                                     | <input type="checkbox"/> I am an active person.              |
| 7. I learn best from    | <input type="checkbox"/> personal relationships                | <input type="checkbox"/> observation                   | <input type="checkbox"/> rational theories  | <input type="checkbox"/> a chance to try out and practice    |
| 8. When I learn:        | <input type="checkbox"/> I feel personally involved in things. | <input type="checkbox"/> I take my time before acting  | <input type="checkbox"/> I like ideas and theories.                                 | <input type="checkbox"/> I like to see results from my work. |
| 9. I learn best when    | <input type="checkbox"/> I rely on my feelings                 | <input type="checkbox"/> I rely on my observations     | <input type="checkbox"/> I rely on my ideas   | <input type="checkbox"/> I can try things out for myself     |
| 10. When I am learning: | <input type="checkbox"/> I am an accepting person.             | <input type="checkbox"/> I am a reserved person.       | <input type="checkbox"/> I am a rational person.                                    | <input type="checkbox"/> I am a responsible person.          |
| 11. When I learn        | <input type="checkbox"/> I get involved                        | <input type="checkbox"/> I like to observe             | <input type="checkbox"/> I evaluate things  | <input type="checkbox"/> I like to be active                 |
| 12. I learn best when:  | <input type="checkbox"/> I am receptive and open-minded.       | <input type="checkbox"/> I am careful.                 | <input type="checkbox"/> I analyze ideas.   | <input type="checkbox"/> I am practical.                     |

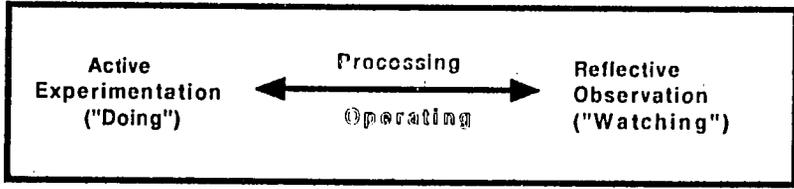

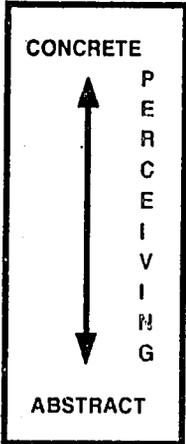

# The Cycle of Learning

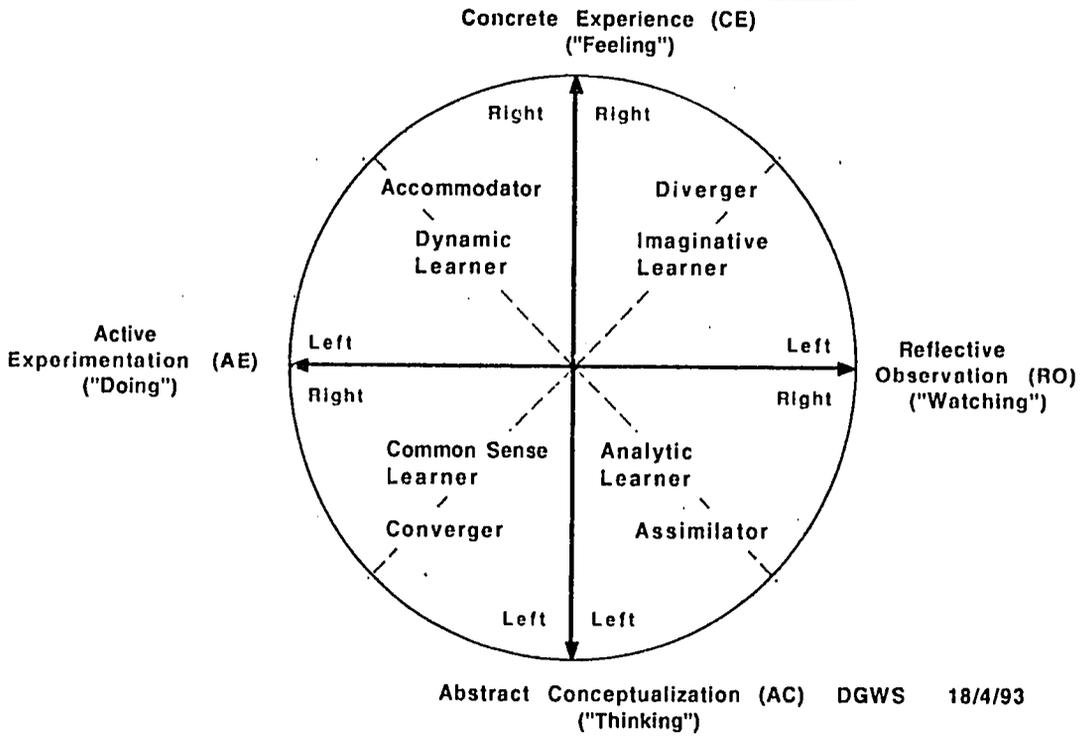

# Learning-Style Type Grid

## LEARNING STYLES CONTINUA

### 4MAT Lesson Plan Cycle

## GENERAL LEARNING STYLE CHARACTERISTICS OF CHILDREN & ADULTS

Bob Samples on Bernice McCarthy's 4-MAT\*

(a trademark of Excel Incorporated and Bernice McCarthy)

The following are all quotations concerning Bernice McCarthy's 4MAT taken from Bob Samples' book, *OPENMIND WHOLEMIND: Parenting and Teaching Tomorrow's Children Today*, Jalmar Press, Rolling Hills Estates, CA 90274, 1987. Parenthesis are my own.

The four learning styles ... are combinations of the intent and behavior involved in the learning experience. Each quadrant represents two qualities. For example, Quadrant 1 learners are committed to **CONCRETE EXPERIENCE AND REFLECTIVE OBSERVATION**. Quadrant 3 learners are guided by an intent on **ABSTRACT CONCEPTUALIZATION** and their behavior is reflected in direct action via **ACTIVE EXPERIMENTATION**. [Quadrant 2 learners perceive things **ABSTRACTLY** and act upon them through **REFLECTIVE OBSERVATION**. Quadrant 4 learners perceive things **CONCRETELY** and act upon them through **ACTIVE EXPERIMENTATION**.] (\*\*SEE HANDOUT 6.2, Lesson Planning Cycle)

... McCarthy's format systematically frames an expression of differences in learning habits and preferences. It also guides teachers and parents to methods that offer each learner a chance for success. ...

...Even more important is the fact that adults (teachers and/or parents) also have learning styles. ... Teachers (tend to) teach to their own learning style or the style the school demands via their style policies (typically Quadrant 2). What this means is that, if I am your teacher, I will teach from my own style or the school's preferred style, not necessarily from yours. [What that means is you may not learn.]

McCarthy's system is a framework for identifying learning styles, and even more important-- a process for systematically allowing children to explore options in learning. ... If a teacher or parent can systematically provide learning modality and learning style options, the child is more likely to experience whole-minded learning. The child is more apt to excel in all areas, to have a positive self image and to experience feelings of success and accomplishment.

### LEARNING STYLES: GENERAL CHARACTERISTICS

#### Quadrant 1 Learners: Preference for Concrete Experience and Reflective Observation

Personal meaning is of primary importance to Quadrant 1 learners. They must gain some personal worth from instruction and may resist starting until they are satisfied that [personal] meaning will be there. They prefer to listen and then conversationally discuss ideas. Group discussion, particularly small group discussions which nurture conversation, is their favorite classroom method. They are very interested in people and believe strongly in their own experience. They model [their behavior] after people they respect. They are innovative in the realm of ideas that relate to people. They seek to establish unity and agreement among all members of a group. Discord and lack of consensus leave them uneasy and uncomfortable.

Healthy Quadrant 1 learners are empathic, considerate and cooperative. Interpersonal involvement is a product of the joy of being together and emphasizes the benefits of cooperation.

Pathological Quadrant 1 learners are manipulative and hold extremely high expectations of others. Unhealthy Quadrant 1 people are imprisoned in their own ego demands. They require constant attention to their well being and enforce dependency in relationships.

## **Quadrant 2 Learners: Preference for Reflective Observation and Abstract Conceptualization**

Learners in this quadrant are the keepers of the truth. They require facts, accuracy and orderliness. They are comforted by rules and they form reality from them. They are attentive to experts but are less interested in people in general. However, if they believe in a person's scholarship or authority, they may admire him or her enthusiastically and establish him or her as a role model. These learners are driven toward "right" answers and their loyalty to what is right is quite strong. When they need to make decisions, their first cry is for facts. They believe rationality and logic are primary virtues.

They are happiest when they are operating in a field of endeavor that is well defined., (where) the expectations are explicit and attainable.

As children they might like .... games with definite rules and boundaries. In school, they are grade-conscious and pursue the things that produce the "right" answer.

Healthy Quadrant 2 learners are marvels of detail and accuracy. They prize form and procedures in expression and can be depended on to be thorough and precise. When they offer something, you can be sure that it has been researched and checked for accuracy. They often require more time than seems necessary, but this is only to check and counter check the accuracy of their work.

Pathological 2's are marked by compulsion to be complete. They are never satisfied that enough data are available and often will obstruct progress with their insatiable need for more information. Often the unhealthy demand for precision will make the Quadrant 2 learner (parent or teacher) a closed-system totalitarian of order and rules. Of all the 4MAT System learners, the 2's are the most susceptible to being closed. This inclination makes sense if we remember that the weight of history and tradition has established the precedents which they can easily see as "right."

## **Quadrant 3 Learners: Preference for Active Experimentation & Abstract Conceptualization**

Almost before one can blink an eye these learners are engaged in action. Matching their compulsion to act is the requirement that what they learn be useful and applicable. Their primary attraction to the arena of abstract conceptualization is that it provides theories to be actively tested. They detest the disclosure of answers before they have had enough time to explore possible solutions. They are practical and want to learn things they can use in everyday life. They cherish "facts," which are seen as the raw material for action.

As children they are the ones who don't discover until ...(Eide -ul-Fitr) ...that instructions were included in the gifts they received ...(Eide-ul-Azha). They are always out of their seats when the bell rings. ....Teachers and parents find these children to be uncooperative in that they are unable to "wait for instructions." They are reluctant to defer action and rewards.

Healthy 3's get things done. They can be depended upon to meet deadlines and produce high quality work. Since they are so action-oriented, their skills often show great maturity. As soon as they feel confident in your trust, they are quick to recognize the need for action before others do and will often save the day. They never forget to feed the hamster and check the fish tank.

Pathological Quadrant 3 learners are compulsive meddlers. They take action reflexively and tend to snarl things up -- they over-act on events. If they have an idea, they might immediately attempt to test it without regard for the needs of others involved.

#### **Quadrant 4 Learners: Preferences for Concrete Experience and Active Experimentation**

These are self-discovery learners. They have a strong need to experience freedom in their learning and have a tendency to transform whatever it is they attempt. They are at home with making decisions since they are so flexible. A bad decision will only be a temporary setback. They are highly intuitive and often come to valid conclusions that are not logically justified. Quadrant 4 learners are born risk takers and for them failure is positive feedback. They are often seen as inconsiderate of others. This is not intentional as they are frequently lost in a task and will seem to abandon common courtesies. Once reminded of the breach of consideration they tend to apologize and get back on task.

As children, Quadrant 4 learners are highly inventive and self-entertaining. It seems their only encounter with teachers and parents is when they are seeking more tools or advice on a self-designated task. For them any assignment is appropriate since they will do with it what they want anyway. Their life pattern is a search for possibility and change. ...

The healthy learners in Quadrant 4 are self-reliant and self-directing. They respect form and procedure but recognize the need for it out of their own inquiry. Once it is recognized, they will discipline themselves and acquire whatever skills they need for accomplishing their purposes.

Pathological 4's are nearly always over committed and fragmented. They never seem to develop the discipline to finish one task before they attempt another. This is different from being able to do several things at once. Being fragmented means they know at the outset they will never finish the commitment but can't resist the novelty of beginning. For them newness is so seductive they are drawn in regardless of the consequences. The result is that they seldom develop the skills or acquire the information to complete work with integrity.

## Chapter 1: Handout 6.3b (paragraph 13)

**LEARNING STYLE CHARACTERISTICS** [Extract from Bernice McCarthy. *The 4MAT System: Teaching to Learning Styles with Right/Left Mode Techniques*. Excel Inc., Barrington, Illinois. Parentheses are mine.]

### Type One: The Imaginative Learners

As learners they perceive information concretely and process it reflectively. They integrate experience with the self. They learn by listening and sharing ideas. They are imaginative thinkers who believe in their own experience. They excel in viewing direct experience from many perspectives. They value 'insight-thinking'. They work for harmony. They need to be personally involved. They seek commitment [from others]. They are interested in people and culture. They are thoughtful and enjoy observing others. They absorb reality. They seek meaning and clarity.

As teachers they are interested in facilitating individual growth. They try to help people become more self-aware. They believe curricula should enhance the ability to be authentic. They see knowledge as growth in personal insight and encourage authenticity in their students. They like discussions, group work, and realistic feedback about feelings. They are caring people who seek to engage their students in cooperative efforts. They are aware of social forces that affect human development.

[As teachers] they are able to focus on meaningful goals. They tend to become fearful under pressure and sometimes lack daring.

As leaders they thrive on developing good ideas, even though this is very time-consuming. They tackle problems by first reflecting alone and then brainstorming with staff. They exercise authority with trust and participation. They work for organizational solidarity. They need staff who are supportive and share their sense of mission.

Strength:	Imaginative ideas
Function by:	Value clarification
Goals:	To be involved in important issues and to bring harmony
Careers:	Counseling, teaching, organizational development, humanities & social sciences
Favorite Question:	Why?

### Type Two: The Analytic Learners

As learners they perceive information abstractly and process it reflectively. They devise theories by integrating their observations into what is known. They seek continuity. They need to know what the experts think. They learn by thinking through ideas. They form reality. They value sequential thinking. They need details. They critique information and collect data. They are thorough and industrious. They will re-examine the facts if situations perplex them. They enjoy traditional classrooms. They find ideas fascinating. They prefer to maximize certainty and are uncomfortable with subjective judgments. They seek intellectual competence and personal effectiveness.

As teachers they are interested in transmitting knowledge. They try to be as accurate and knowledgeable as possible. They believe curricula should further understanding of significant information and should be presented systemically. They see knowledge as deepening comprehension. They encourage outstanding students. They like facts and details and organized sequential thinking. They are traditional teachers who seek to imbue a love of knowledge. They believe in the rational use of authority. Sometimes their dominating attitude tends to discourage creativity.

As leaders they thrive on assimilating disparate facts into coherent theories. They tackle problems with rationality and logic. They lead by principles and procedures. They exercise authority with assertive persuasion and by knowing the facts. They work to enhance their organization as an embodiment of tradition and prestige. They need staff who are well organized, write things down with diligence and care, and follow through on agreed decisions.

Strength:	Creating concepts and models
Function by:	Thinking things through
Goals:	Intellectual recognition
Careers:	Mathematics, research and planning, natural sciences
Favorite Question:	What?

### **Type Three: The Common Sense Learners**

**As learners** they perceive information abstractly and process it actively. They integrate theory and practice. They learn by testing theories and applying common sense. They are pragmatists. They believe if it works, use it. They are down-to-earth problem-solvers, who resent being given answers. They do not stand on ceremony but get right to the point. They have a limited tolerance for fuzzy ideas. They value strategic thinking. They are skills oriented. They experiment and tinker with things. They need to know how things work. They edit reality, cut right to the heart of things. Sometimes they seem bossy and impersonal. They seek utility and results.

**As teachers** they are interested in productivity and competence. They try to give students the skills they need to be economically independent in life. They believe curricula should be geared to this kind of focus. They see knowledge as enabling students to be capable of making their own way. They encourage practical applications. They like technical things and hands-on activities. They are exacting and seek quality and productivity. They believe the best way is determined pragmatically. They use measured rewards. They tend to be inflexible and self-contained and lack team-work skills.

**As leaders** they thrive on plans and time lines. They tackle problems by making unilateral decisions. They lead by personal forcefulness inspiring quality. They exercise authority by reward/punishment. (The fewer the rules the better but enforce rigorously the ones you have.) They work hard to make their organization productive and solvent. They need staff who are task oriented and move quickly.

Strength:	Practical application of ideas
Function by:	Factual data gathered from hands-on experiences
Goals:	To bring their view of the present in line with future security
Careers:	Engineering, applied sciences, surgeons
Favorite question:	How does this work?

### **Type Four: The Dynamic Learners**

**As learners** they perceive information concretely and process it actively. They integrate experience and application. They learn by trial and error. They are believers in self discovery. They are enthusiastic about new things. They are adaptable, even relish change. They excel when flexibility is needed. They often reach accurate conclusions in the absence of logical justification. They are risk takers who are at ease with people. They enrich reality by taking what is and adding something of themselves to it. They are sometimes seen as manipulative and pushy. They seek to influence.

**As teachers** they are interested in enabling student self-discovery. They try to help people to act on their own visions. They believe curricula should be geared to learners' interests. They see knowledge as a tool for improving the larger society. They encourage experiential learning. They like variety in instructional methods. They are dramatic teachers who seek to energize their students. They attempt to create new forms, to stimulate life and to draw new boundaries. They tend to rashness and manipulation.

**As leaders** they thrive on crisis and challenge. They tackle problems by looking for patterns, scanning possibilities. They lead by energizing people. They exercise authority by holding up a vision of what might be. They work hard to establish their organizations as front runners. They need staff who can follow up and implement details.

Strength:	Action and presenting challenges
Function by:	Acting, testing, and creating new experiences
Goals:	To bring action to ideas
Careers:	Marketing, sales, entertainment, education, social professions
Favorite Question:	What if?

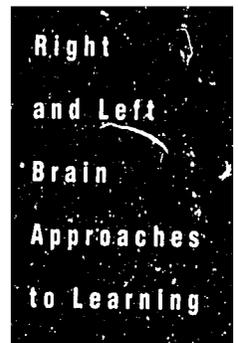

Chapter 1: Handout 6.4 (Paragraph 15)

---

---

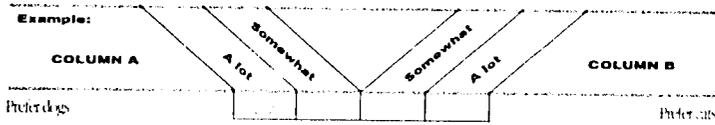

---

---

# INSTRUCTIONS

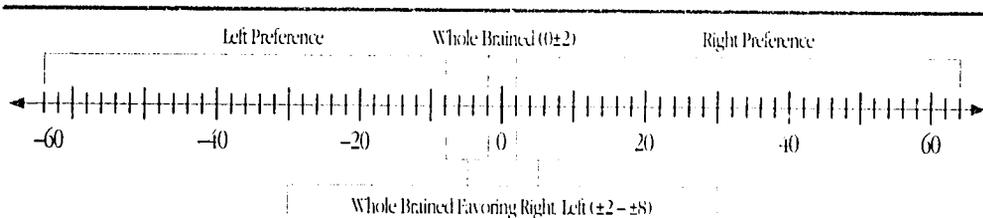

For each numbered item there are four possible choices. Either choose "a lot" or "somewhat" from the column A side, or "a lot" or "somewhat" from the column B side. For example: I prefer dogs "a lot" or "somewhat" — or — I prefer cats "a lot" or "somewhat". Choose one answer for each numbered item. Place an O in the appropriate blank.

<b>COLUMN A</b>	<i>A lot</i>	<i>Somewhat</i>	<i>Somewhat</i>	<i>A lot</i>	<b>COLUMN B</b>
1. bases decisions on facts					bases decisions on feelings
2. prefers organized structure in a work setting					prefers open-ended work setting
3. carefree, spontaneous					careful, deliberate
4. understands how the pieces fit together					understands from experience
5. tries hunches					approaches problems logically
6. like an athlete or artist					like an accountant or chemist
7. like a tax lawyer					like a criminal lawyer
8. neat					sloppy
9. process oriented					product oriented
10. improvising new ideas					thoughtful, both feet on the ground
11. prefers change and the unusual					prefers order and stability
12. recalls information, names					recalls faces, dress, actions
13. precise in language					free, sweeping terms
14. focus on words said and the message					takes in body language, emotional tone
15. holistic, inclusive					orderly, sequential
16. words and numbers					space and form
17. synthesizing					analyzing
18. abstract					concrete
19. emotional					rational
20. objective					subjective
21. waking					dreaming
22. timebound					timeless
23. realistic					idealistic
24. lead by the heart					lead by the mind
25. specific					ambiguous
26. community					agency
27. outlook					insight
28. cause and effect					resemblances
29. lumpier					splitter
30. intellectual rigor					imagination
31. soft					sharp
32. persist					encompass

# HEMISPHERIC MODE INDICATOR SCORING KEY

	Column A		Column B

26.	+2	+1	-1	-2
27.	+2	+1	-1	-2
28.	-2	-1	+1	+2
29.	+2	+1	-1	-2
30.	-2	-1	+1	+2
31.	+2	+1	-1	-2
32.	-2	-1	+1	+2

1.) Total all the minus numbers.

Total minus = \_\_\_\_\_

2.) Total all the plus numbers.

Total plus = \_\_\_\_\_

3.) Compute the difference.

=

4.) Mark your score above.

You may now complete  
your Learning Type  
Measure\* Profile  
(if applicable).

# RIGHT/LEFT MODE CHARACTERISTICS

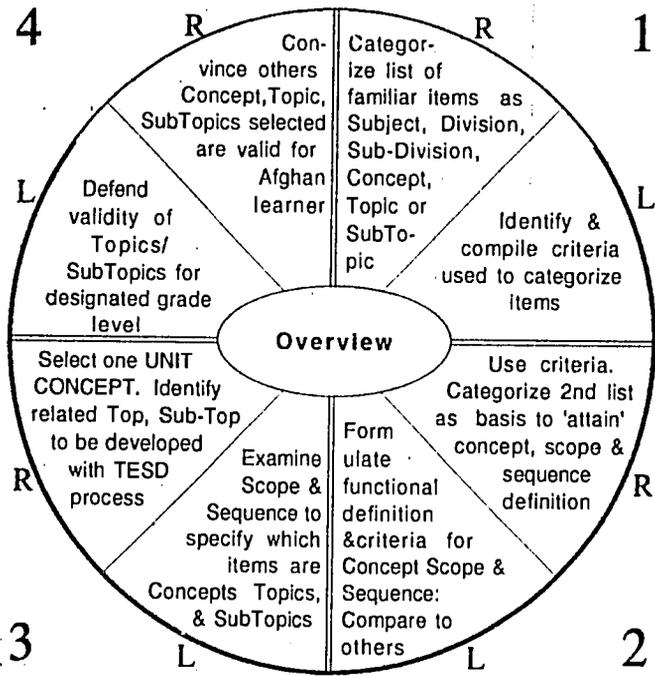

## LEFT MODE

- Rational
- Responds to verbal instructions
- Controlled, systematic experiments
- Problem solves by logically and sequentially looking at the parts of things
- Makes objective judgements
- Looks at differences
- Is planned and structured
- Prefers established, certain information
- Analytic reader
- Primary reliance on language in thinking and remembering
- Prefers talking and writing
- Prefers multiple choice tests
- Controls feelings
- Responsive to structure of environment
- Prefers hierarchical (ranked) authority structures
- Sequential
- Is a splitter: distinction important
- Talks, and talks, and talks
- Is logical, sees cause and effect
- Draws on previously accumulated, organized information

## RIGHT MODE

- Intuitive
- Responds to demonstrated instructions
- Open-ended, random experiments
- Problem solves with hunches, looking for patterns and configurations
- Makes subjective judgements
- Looks at similarities
- Is fluid and spontaneous
- Prefers elusive, uncertain information
- Synthesizing
- Primary reliance on images in thinking and remembering
- Prefers drawing and manipulating objects
- Prefers open-ended questions
- Free with feelings
- Essentially self-acting
- Prefers collegial (participative) authority structures
- Simultaneous
- Is a lumper—connectedness important
- Is mute—uses pictures, not words
- Is analogic, sees correspondences, resemblances
- Draws on unbounded qualitative patterns that are not organized into sequences, but that cluster around images of crystallized feelings

Title: Ch 2 Wheel& OVonly  
1-3

Ref. Code: FlowChart

Grade level: Adult

Duration: 2 days

Subject: TESD Flow Chart Transfer

Author(s): D. Schutte with Specialist Facilitators (see note)

Concept: Steps 1 - 3 TESD Flow Chart

Keys/Cross-refs: See D. Schutte, Total Education Systems Development Flow Chart 4MAT materials. 4MAT is registered trademark of Excel, Inc. & Bernice McCarthy, Barrington, IL.

— Overview —

7. TESD Flow Chart Steps 1 - 3

UNDERSTANDING THE IDEA OF CONCEPT SCOPE AND SEQUENCE AND ITS RELATION TO THE DEVELOPMENT OF THE CONTENT WHICH IS TO BE TAUGHT TO AFGHAN CHILDREN AND YOUTH IN ALL SUBJECTS AT EACH GRADE LEVEL.

OVERVIEW: Goals, Aim, Outcomes:

1. Trainees will discriminate between, LABELS for academic classifications of subject matter, i.e. SUBJECTS further subdivided into DIVISIONS, and LABELS given in TESD curriculum design to substantive cognitive content which is to be taught and learned in

2. Given the general definition for each of the words, "Concept", "Scope", and "Sequence", Trainees will synthesize to construct a functional definition of the whole idea, *Concept Scope and Sequence* and will explain its relationship to TESD at the center of 4MAT\* Lesson Planning.
3. Trainees will establish criteria for determining whether a particular content item from a specific grade level in the *Concept Scope and Sequence* is placed in a specific 'Subject' or 'Division' category under the heading "Concept", "Topic", or "SubTopic/Sub-Subtopic. They also will be able to discriminate between Concepts, Topics, and SubTopics included in the prepared *Concept Scope and Sequence* and explain their relevance to the development of teachers resource books, instructional materials, and student texts.
4. Trainees will recognize the need to compare the culturally sensitive *Concept Scope and Sequence* prepared for Afghan children and youth with research-based scope and sequence prepared for children in other countries. This is to ensure Afghan children have equal access to an education which will allow them to cooperate and compete in the modern world.

#### About the Authors:

These Materials were developed by Dr. Donald G.W. Schutte. They were written for and modified during a Master Teacher Training Workshop held in Peshawar, Pakistan. This workshop was supervised by Dr. Schutte but was conducted by trained Afghan Specialist Facilitators. They responded to the materials and suggested changes to them during the process of implementation. The facilitators' full names are listed in the credits section of the introduction. Alphabetically, they are -- Amouzgar, Azizi\*, Bakhtari\*, Bandawal, Besmellah, Hekmaty, Najibullah, Najmi\*, Nedai\*, Sayeed, Sherzad, Sultani, Yadgari\*, Yusufzai. Those marked with an asterisk are Science and Mathematics specialists who actually conducted the workshop for Master Teacher Trainers. The others are either Social Studies or Language Arts specialists. Together, along with those conducting the workshop, they were busy during the workshop period translating this Trainers Manual into Dari and Pushtu.

At the time of the writing, Dr. Schutte, was a permanent Team Member of the University of Nebraska at Omaha, Education Sector Support Project. He was the Project's Teacher Training and Curriculum Design Coordinator.

Dr. Gerald Boardman, Chief of Party, and Professor Abdul Salaam Azimi, his Deputy lead the Project. It is sponsored by USAID. UNO/ESSP is a cross-border project supporting the reconstruction of Afghan education. It is located in Peshawar, Pakistan.

\*4MAT is a registered Trademark of Excel Incorporated of Barrington, Il., and Bernice McCarthy.

## Quadrant 1

Overall aim for Quadrant 1, Right and Left Mode: Trainers will create an experience that allows trainees to reflect on and analyze that experience in order to: 1) differentiate among and between subjects, divisions, concepts, topics or subtopics; 2) describe the characteristics that define the criteria which underlie their choices., and 3) compare and contrast these terms with terms of classification with which they are more familiar, i.e., Subject, Parts, Major Topics, Minor Topics and Sub-Minor Topics.

### Quadrant 1, Right Mode

**Outcome:** Given a list of potential subjects, divisions, concepts, topics, or subtopics and told which is the most inclusive in terms of hierarchy, participants will be able to identify and classify an item on the list in one of the following categories: subject, division, concept, topic or subtopic.

Trainer Directed Activities:

#### 1. Differentiate among and between SUBJECT, DIVISION, SUB-DIVISION, and CONCEPTS, TOPICS, SUBTOPICS, and SUB-SUBTOPICS.

1.1. Distribute (Handout 7.1 ) face up. BEFORE YOU BEGIN THE DISTRIBUTION, TELL TRAINEES NOT TO TURN THE SHEET OVER. The diagram shows a tree arranged as an hierarchy. Trainees are given the terms-- Subject, Division, Concepts, Topics, SubTopics and are instructed to rank them in order from the most inclusive to the least.

1.1.1. Trainer will tell trainees that when they have completed their ranking they are to turn to the reverse side of the sheet (Handout 7.1.1) to check their responses. They are to discuss with their neighbor the criteria on which they based their choice and any differences between their own answers and the prepared answers (Handout 7.1.1). In the large group discussion Trainer will explain the following: a) that the most inclusive term is SUBJECT. It designates an area of human knowledge that has been marked off as subject matter for the purpose of study. Divisions and Sub-divisions designate self-contained units of knowledge within a Subject. These are marked off for specialized study. Division, therefore, is subordinate to Subject. Sub-divisions are subordinates to Divisions.

1.1.1. Examples:

Subject:	Mathematics	Science	Social Studies	Language Arts
Division:	Geometry	Biology	History	Reading
SubDivision:	Solid Geometry	Life Science	Geography	Phonics

1.2. Under the headings of Subject, Division, and Sub-Division, the next most inclusive term is CONCEPT because TOPICS are subordinate ideas related to the main idea contained in the Concept. In turn, SUBTOPICS are subordinate to the ideas contained in the TOPICS. Thus, the next most inclusive term after CONCEPT is TOPIC. TOPICS include SUBTOPICS. In turn, Subtopics include the least inclusive terms, SUB-SUBTOPICS. Trainer tells trainees that Concepts, Topics, SubTopics and Sub-SubTopics make up the substantive cognitive content learners should learn in a specific subject at a particular grade level. Therefore, it makes up the "academic" content that we teach to students. Teacher training courses, therefore, must ensure that teachers, as a minimum, are taught what to teach, i.e., the specified "academic content," and that they are taught the background necessary to teach it.

1.3. Trainer distributes Handout 7.2. It includes a List of items that trainees are to identify and classify as Subjects, Divisions, Sub-Divisions, or Concepts, Topics, SubTopics or Sub-SubTopics.

- 1.4. Trainees will read and follow the instructions on Handout 7.2 and complete the task by placing a check in the column of their choice to indicate whether they think an item on the list should be classified as Subject, Division, Sub-Division, or Concept, Topic, Subtopic, or Sub-Subtopic.

Evaluation:

Divide the group into groups of two or three. Trainees will identify from their previous experience and name possible curriculum items which could be classified under one of the following headings -- Subject, Division, Sub Division, Concept, Topic, Subtopic or Sub-Subtopic. Trainees will cite the characteristics of each item named that they have used as criteria to support their classification. The small group, monitored by the Specialist Facilitators will discuss the validity of the classification and the criteria.

### Quadrant 1, Left Mode

Outcomes: Trainees will be able to name, describe and explain the attributes that they used as criteria to classify an item in one category or another. They will recall the different purposes for which the labels 'Subject' and 'Division' are used in contrast to the purpose served in curriculum development by the labels, 'Concept', 'Topic', 'Subtopic'. They will be able to correlate these terms with those with which they are already familiar, i.e., Subject, Parts, Major Topics, Minor Topics and Minor Sub-Topics. They will be able to substitute the terms used in TESD for those terms.

Trainer Directed Activities:

1. Trainees will name, describe and explain in writing the characteristics they used as criteria to place an item in one category or another. Trainer will ask them to describe the different purposes served in curriculum development by the terms, 'Subject' and 'Division', contrasted with the terms, 'Concept', 'Topic', and 'Sub-topic'. When they develop their criteria for classifying items, Trainer asks if grade level affects the classification when placing an item in one category or another.
  - 1.1 Trainees will share their descriptions and explanations with a neighbor. (Use Think -- Pair--Share strategy.)
  - 1.2 Trainer will tally responses on the board. Trainer will conduct a discussion to identify differences and agree on criteria for alternative classifications of the same item, depending on the grade level of learning as the point of departure.
2. Trainees will be given a list of similar terms with which they are already familiar, i.e., "Subject, Parts, Major Topics, Minor Topics and Minor Sub-Topics. Trainees will be able to correlate these terms with those used in TESD to develop a *CONCEPT SCOPE AND SEQUENCE*, i.e., Subject, Division, Sub-division, or Concept, Topic, Subtopic or Sub-Subtopic. Be sure that trainees agree to use the terminology as it is used in TESD in order not to be confused with the old terminology.

2.1 Trainer will make two columns on the board or on a separate prepared chart:

In COLUMN ONE list terms:	In COLUMN TWO list terms:
Subject	Subject
Division	Part
SubDivision	
Concept	Main Topic
Topic	Minor Topic
Subtopic	
Concept	Main Topic
Topic 1	Minor Topic
Sub topic 1.1	Minor Sub Topic
Sub topic 1.2	
Topic 2	
Sub topic 2.1	
Topic 3	
Sub topic 3.1	

3. Trainer will distribute Handout 7.3, K-W-L + Think-Pair-Share Strategy for Defining *Concept Scope and Sequence*.
4. Trainees will: a) briefly write in column 1 *What They Know About* : i) Concept, ii) Scope, iii) Sequence  
 b) briefly write in column 2 *What They Want to Know About*: i) Concept, ii) Scope, iii) Sequence
5. Trainees will share and compare *what they know* and *want to know about* the words, "concept," "scope," and "sequence," with their neighbors.
6. (Trainer Note: This is in preparation for constructing a functional definition of *Concept Scope and Sequence*.) Trainer will conduct a large group discussion, summarizing what the trainees know and want to know about the three words, "Concept," "Scope," and "Sequence."

Evaluation:

Trainer will use a 'brainstorm' strategy to add to the possible criteria that could be used to classify curriculum items under one heading or another. (Trainer note: The Q 1 assessments are more in the way of 'Concept Attainment' strategy than 'Concept Formulation' since trainees at this point are in the beginning stages of this unit. Are trainees able to correlate their prior personal experiences with those of their peers in order to begin a process of agreeing on characteristics which allow curriculum developers to classify items within a *Concept Scope and Sequence* statement?) Trainees will have completed *What they know* and *what they want to know* on the K-W-L form and as they work on *attaining and formulating* a definition for the terms, 'concept', 'scope', and 'sequence,' they will continuously complete the *what I have learned* column on the form.

### Quadrant 2:

Overall Aims of Quadrant 2: Trainers will integrate into the broader concept the reflective analysis based on the experience of the personalized concept. Organize knowledge and skills related to the idea of *Concept Scope and Sequence* in terms of the principles and techniques of memory and the strategy of 'Mastery Lecture'.

## Quadrant 2, Right Mode

**Outcomes:** Trainees will discriminate between Subjects and Divisions as labels and concepts, topics, and subtopics which comprise the substantive cognitive content learners are expected to learn. Given a list of items that have been drawn from their own subject specialty and which have been identified with symbols representing Subject, Division, Concept, Topic, Subtopic or Sub-Subtopic, trainees will state and defend with reason their agreement or disagreement with the stated classifications.

### Trainer Directed Activities.

1. Trainer will divide Trainees into subject area specialty groups, i.e., Science group, Social Studies group, Language Arts group, and Mathematics group.
2. Trainer will distribute Handout 7.4 on which a list of curriculum items have been classified as being in one category or another of the following categories: Subject, Division, Concept, Topic, SubTopic or Sub-SubTopic.
3. Trainer will also distribute three cards to each Trainee. One card will have written on it in large letters easily seen at a distance the word "AGREE". The second card will have written on it in large letters the word "DISAGREE". The third card will have written on it "DON'T KNOW".
4. TRAINEES will review the classifications that are indicated by each item in the List on Handout 7.4. They will place an "A" next to those classifications with which they agree, a "D" next to those classifications with which they disagree and a "DK" next to those about which they have a doubt.
5. On a separate sheet of paper or on the back of the Handout 7.4, Trainees will identify the number of the items with which they disagree. They will indicate their own classification and briefly indicate in writing the rationale and criteria they used to reclassify the item.
6. Working first in pairs or threes within their specialty groups and then with the whole group, trainees will discuss the rationale and criteria they use to decide whether they agree or disagree with a particular item's classification. Then as a group they will agree on sets of attributes, including purposes served, that they use as criteria for classifying an item as Subject, Division, Concept, Topic, SubTopic or Sub-SubTopic.
7. Trainer will call to attention the whole group to review each item. On signal, for each item, the Trainer will ask those who agree with the classification to hold up their "AGREE" card. Those who disagree with the classification will hold up their "DISAGREE" card. Those who have doubts will hold up their "DON'T KNOW" card.
8. Trainer will record on the board or 'news sheet' the rationales elicited from the group in terms of the attributes to be used as criteria for classifying an item in one category or another. Trainer, with the trainees will make a written summary to be referred to in further workshop activities.

### Evaluation:

Specialist trainee groups will select a group leader. The leader is responsible to work with the Trainer to develop the list of attributes that can be used as criteria to classify curriculum items in one category or another. They are responsible for reporting the group consensus to the large group. Participants will use their AGREE card or DISAGREE card to indicate their approval or disapproval of the consensus. Trainers will help to resolve any remaining differences.

## Quadrant 2, Left Mode

Outcomes: Trainees will construct functional definitions of *Concept Scope and Sequence*. The definitions will operationally relate the three independent underlying ideas, "Concept", "Scope", and "Sequence" so that the definition may be used as a tool to select a Concept and divide it into Topics and Subtopics as the first step in using the TESD process. Trainees will also compare the *Concept Scope and Sequence* document with a Scope and Sequence document developed for children at the same grade levels in other countries. Trainees will positively assess the need for a modern, but culturally sensitive, *Concept Scope and Sequence* for Afghan children as a basis for creating curriculum design, instructional materials, and student texts that are necessary if the Mission Statement is to be implemented.

1. Trainer will distribute Handout 7.5, *Defining Concept Scope and Sequence*.
2. Trainer will indicate that trainees are to: a) consider the dictionary definitions of the three words, "Concept", "Scope", and "Sequence", b) construct a specific definition for the composite idea of *Concept Scope and Sequence*. Trainer will refer trainees to the two definitions of *Concept Scope and Sequence* and ask them to restate those definitions in their own words. Trainer will be sure that their restatements contain all the elements given in the prepared definition contained in Handout 7.5.
3. Trainer will indicate that CONCEPTS with their TOPICS and SUBTOPICS make up the content we want Afghan children to learn. When the concepts are sequenced according to a research-determined depth and breadth of knowledge in a specific subject area is appropriate to be learned by children specific age and grade levels, we have constructed a *Concept Scope and Sequence*. Having constructed it, we are able to select one concept, identify the important topics and subtopics related to it, place it at the center of the 4MAT lesson planning cycle, and plan lessons centered on a "concept unit". The lesson guide is planned using Bernice McCarthy's 4MAT\* system.
4. McCarthy's 4MAT is the "flywheel" of Schutte's Total Education Systems Development (TESD) Process. It is a heavy-rimmed rotating wheel used to keep the shaft of the "educational development machine" turning at the steady pace necessary for the reconstruction of the Afghan educational system. 4MAT's force within TESD is centrifugal. Acting outward from a central axis of identified and sequenced concepts, the 4MAT wheel is used to develop more than a lesson plan. It emits:
  - a) a Lesson Guide for Teachers and Students, containing the "concept unit" lesson plan,
  - b) a Teacher's Academic Resource Book that is necessary to upgrade a teacher's basic propositional, procedural and conditional knowledge and skills if the plan of the lesson is to be implemented,
  - c) Student texts, learning aids, and instructional materials,
  - d) a Teacher's Pedagogical Resource Book which uses specific applications to upgrade a Teacher's professional knowledge and skills. These include classroom management. Attention is also given to establishing a proactive environment.
  - e) Continuous Assessment and Evaluation Strategies and Techniques.

In turn, 'a' to 'e', above, form a sound foundation to complete the Total Education Systems Development Process. This foundation allows the development of strategies and tactics necessary for: a) facilitative supervision, and b) outcomes-based, purpose level management and administration.

(Note: 4MAT\* is a registered Trademark owned by Excel, Inc. of Barrington, IL and Bernice McCarthy.)

5. Trainer will distribute (to Trainees as appropriate to their Subject Areas) Handout 7.6, the draft suggested *Afghan Concept Scope and Sequence* for Mathematics or Science. (Social Studies or Language Arts Scope and Sequence documents for grades 1-3 are in appendix.)
9. Trainer will distribute (to Trainees as appropriate to their Subject Areas) Handout 7.7, Scope and Sequence statements from other countries as a basis for comparison.
10. Trainees will compare and contrast concepts contained in the *Concept Scope and Sequence* suggested for Afghan children with those prescribed for children in other countries. Trainees will use a Think-Pair-Share Strategy to consider the following questions: "If the MISSION STATEMENT IS TO BE IMPLEMENTED, should Afghan Children in Grades 1, 2, 3, or 4 to 6, 7-9, 10-12 have the same opportunity to learn as other children in the world? For example: Should Afghan children in grade one learn to solve addition and subtraction problems containing one and two column numbers? Should Afghan children learn about living and non-living things in grade one science or must they wait until 4th grade? If they must wait until 4th grade, what is the rationale? Would this indicate a (false) belief that Afghan children are not as capable as children in other countries? Trainees should provide a rational argument for their statements. Can "time limits" be used as a rational argument? Who limits time and how do those who limit time in school schedules justify their decisions in terms of children's welfare instead of other criteria?"
11. Trainer will list on the board and discuss with the group other questions which are raised in making this comparison between the two scope and sequence statements.

### Quadrant 3, Left Mode

Outcomes: Trainees will be able to differentiate between and among concepts, topics, and subtopics found in the suggested Afghan *Concept Scope and Sequence*. Trainee will use previously established criteria to justify the writers choice of the designated categories. Included in the justification, The appropriateness of teaching particular concepts to Afghan learners at the grade level that is under consideration at the moment should be included in the justification.

#### Trainer Directed Activities

Trainers will group Trainees in their subject area specialty groups

1. Trainees will use the previously distributed Handout 7.6, suggested draft *Afghan Concept Scope and Sequence*. Trainer will read to trainees the paragraph, above, which describes the intended outcome of this exercise.
2. Trainees will: a) study the suggested draft *Afghan Concept Scope and Sequence* and b) will identify specific items and c) will describe those items according to their classification as either a Concept, Topic, Subtopic, or Sub-Subtopic.

#### Evaluation:

Trainees will justify the classifications used by the writers of the *suggested Afghan Concept Scope and Sequence* previously established criteria, including appropriateness for Afghan learners at the grade level being considered.

### Quadrant 3, Right Mode

**Outcome:** Within each small group which has been established within the Subject Area Groupings of Trainees, the group will agree with Trainer to select one class 1 level Concept with its Topics and/or SubTopics and Sub-Subtopics which is to be developed by the group using the TESD step-by-step process following the TESD Flow Chart.

**Trainer Directed Activity:**

1. Trainer will group trainees into smaller production groups matched according to their relationship with a designated Specialist Facilitator (SF). Each SF will act as his assigned group's facilitator and mentor during the group production sessions. Each eventually will become the facilitator and mentor for individual Trainees as they produce their individual projects.)
2. Trainees will study the suggested *Concept Scope and Sequence*.
3. Trainees will select, in consultation and agreement with the specialist facilitator, one Concept and will identify the Topics and Subtopics related to it which are to be developed using the TESD process.

**Evaluation:**

Trainees will make their selection. Both individually and as a group, they must be able to agree on the classifications of the selected Concept with its Topics and Subtopics within their Subject and Division. At this point they must not only justify the classifications but they must begin to verbalize their thinking about the possible content to be included in the teaching of the selected Concept with its related Topics and Subtopics.

### Quadrant 4, Left Mode

**Outcome:** Trainers will be able to defend the validity for Afghan children in class 1. of the Concept (with its Topics and Subtopics) they have selected to develop.

**Trainer Directed Activities.**

1. Trainees, working in their small group within their subject area specialty, will construct rational arguments to defend the validity of the chosen Concept, Topics and SubTopics for Afghan children in class one. The rationale should be based on a) established criteria and comparison with what children in other countries are learning in the same subject at the same class level, b) establishing a rationale justifying the teaching of the selected concept to meet the special needs of Afghan children.

**Evaluation:**

Agreement by peers and Specialist Facilitator concerning the validity of the justification in terms of comparing Afghan children to other children in the world and meeting any special needs which Afghan children have due to the war or other reasons.

### Quadrant 4, Right Mode

Trainees will convince others that the concepts they chose as well as others in the suggested *Afghan Concept Scope and Sequence* are valid for Afghan learners in Classes 1, 2, and 3 and that they are able, using the same trainee active methods as were used with them, to transfer to Teachers inside Afghanistan, faithfully and without distortion, the information contained in Chapter 2 of this Trainers Manual

#### Outcomes:

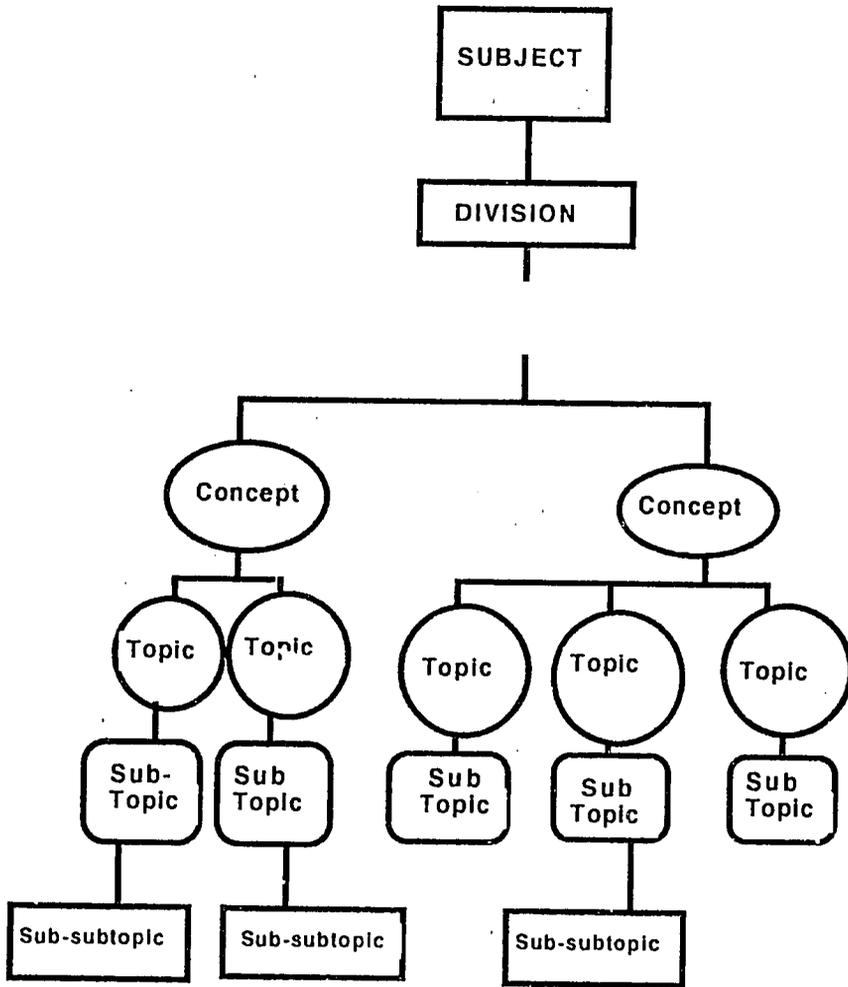

1. Trainer will group trainees within their subject specialties in groups of 3, 4, or 5.
2. Trainees will review Chapter 2 of the Trainers Manual as well as the Handouts which accompany the manual.
3. Trainees will return to Handout 7.4. (Think-Pair-Share Strategy). They will complete the last column on the form, i.e., What I have learned about Concept Scope and Sequence, and share their new knowledge first with their neighbor and, then, with the larger group of subject specialists.
4. Trainees will select one or two partners. They will use the information in the Trainers Manual and from item 3, above, to role play transferring that information to Head Teachers and Teachers inside Afghanistan.

#### Evaluation:

Trainees will keep a Journal indicating both their successes and their problems in transferring the information to others during the role playing exercises. The Journals will be shared with the large group. Where there are still problems to be resolved the Specialist Facilitators and UNO/ESSP Staff will help to resolve them. Solutions will be recorded in the Journal for future reference.

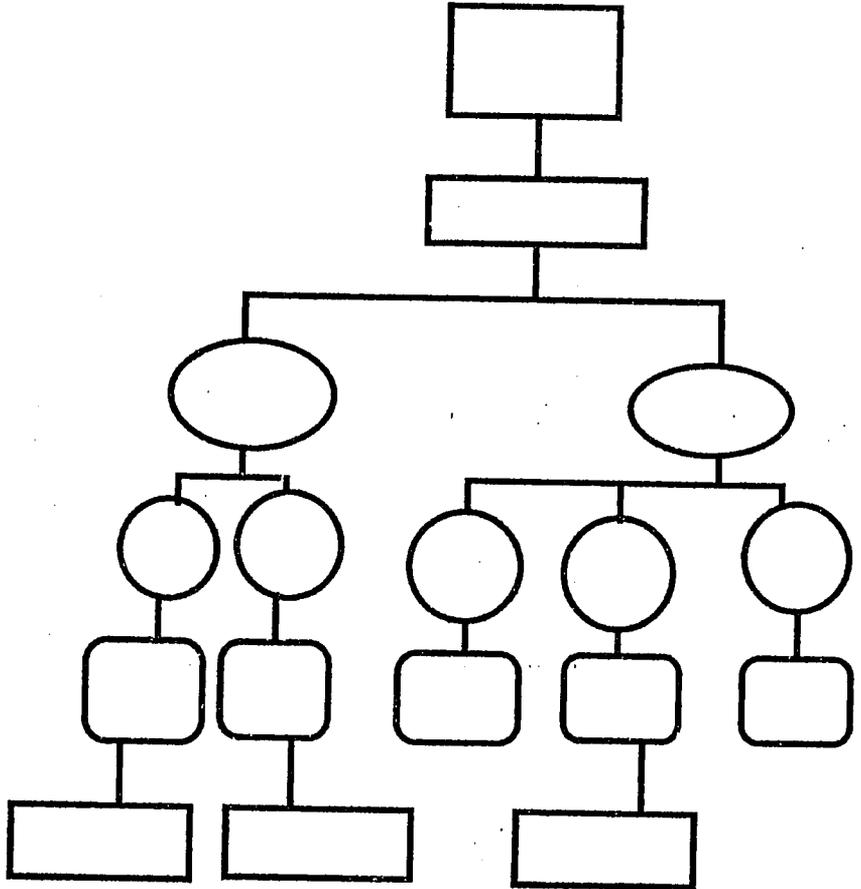

### HIERARCHY OF CONCEPT SCOPE AND SEQUENCE TERMS

(See Instructions on Reverse before studying this diagram)

### HIERARCHY OF CONCEPT SCOPE AND SEQUENCE TERMS

Instructions: Given the terms *SUBJECT*, *DIVISION*, *CONCEPT*, *TOPIC*, *SUBTOPIC*, & *SUB-SUBTOPIC*, you are to indicate their order. Write in the blanks below which term is subordinate\*\* to the other terms. Check your answers with those on the reverse side of this sheet (Handout 7.1.1). Discuss your answers and any differences you had your classifications, first with your neighbor and then with the large group.

\*\*Subordinate means to place in order of inclusiveness from most to least inclusive. The least inclusive is subordinate to the most inclusive.

**Concept Scope & Sequence Items for Classification**

**INSTRUCTIONS:** From the list below, discriminate among Subjects, Divisions, Concepts, Topics or Subtopics. Place an "X" in the box which seem to you to be subjects? divisions? concepts? topics? subtopics? Is it possible there could be valid disagreement among professionals about which category to place an item in? What criteria did you use to make decisions as to whether to place an item in one category or another? Would it make any difference in your choice of classification if the curriculum item is to be placed the a concept scope and sequence at different grade levels? What is the reason can you give for the difference, if there is a difference.

<b>CATEGORIES</b>					<b>ITEMS</b>

Chapter 2: Handout 7.5 (Q2, Left Mode--paragraph 1)

**K-W-L Strategy**

DEFINITION = CONCEPT + SCOPE + SEQUENCE = *Concept Scope and Sequence*

K= WHAT DO I KNOW ABOUT:

W = WHAT DO I WANT TO KNOW ABOUT:

L = WHAT HAVE I LEARNED ABOUT:

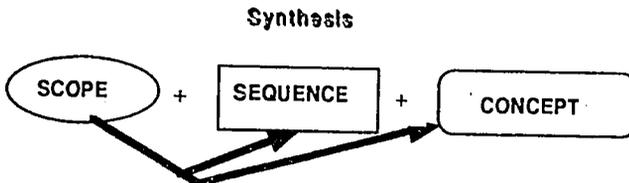

Learning to make meaning of our world means making connections, means moving from wholes to parts or parts to wholes. If we already know something about the whole, then we may learn more by analyzing its parts. If we already know something about the parts, then we may learn more through synthesizing to make a whole. In this case what we want to know is the definitions of the idea *Concept Scope and Sequence*. We begin by thinking about what we know about each term that makes up the idea. Then we go to the dictionary to get the broad or generalized meaning of each of the terms. The next step is to apply those general meanings to our specific case. Since this concept contain multiple terms it means we must synthesize both general and specific meanings to define it.

**Dictionary Definitions:** (Those appropriate for our purpose here are marked with \*\*)

Scope = 1) The range of one's perceptions, thought, or actions; 2) Breadth or opportunity to function; \*\*3) The area covered by a given activity or subject

Sequence = \*\*1) A following of one thing after another; succession; 2) An order of succession ; arrangement; 3) a related or continuous series.

Concept = \*\*1) A general idea or understanding, especially one derived from specific instances.

*Specific Definition for Idea of Concept Scope and Sequence*

The content area of propositional, procedural, and conditional knowledge, skills, attitudes and values (CONCEPTS) that a) covers a specified depth and breadth of information in a given subject area (SCOPE) and b) is sequenced in ordered relationships between and among concepts between and within specific grade levels (SEQUENCE).

© R

The breadth and depth of the content area covered (SCOPE) with respect to a concept and its related topics, and subtopics (CONCEPT) ordered by the sequence in which it is to be presented to learners at and within specific grade levels (SEQUENCE).

# DRAFT

MATHMATICS DEPARTMENT

### Reasoning

	K	1	2	3	4	5	6	7	8
Using logic									
Making predictions									
Analyzing and making decisions									
Generalizing									
Evaluate reasonableness									
Drawing conclusions									
Explain reasoning									
Justify thinking									
Sort & classify									
Prove or disprove									
Logical and visual thinking									

### Geometry

Exploring shapes									
Identify plane figures									
Identify space figures									
Patterns									
Tessellations									
Points, lines, line segments, plane									
Parallel, intersecting, perpendicular, skew									
Angles, rays, vertex									
Classify angles									
Measure angles									
Complementary, supplementary angles									
Adjacent, vertical, corresponding angles									
Classify polygons									
Analyze triangles: classify by angles									
classify by sides									
sum of angle measures									
Similar figures									
congruent figures									
Symmetry									
Circles									
center, chord, radius, diameter,									
arc, semicircle									
central angle, inscribed angle									
Constructions									
Coordinate Geometry									
Translations, reflections, rotations									
Exploring space figures									

### Measurement

Using concrete objects									
Length									
using nonstandard units									
using customary units									
using metric units									
estimating									
relating units									
Mass/Weight									
using nonstandard units									

### Measurement, continued

	K	1	2	3	4	5	6	7	8
using customary units									
using metric units									
estimating									
relating units									
Capacity									
using nonstandard units									
using customary units									
using metric units									
estimating									
relating units									
Precision of measurement									
Temperature, degrees Celsius, Fahrenheit									
Perimeter, using concrete models									
Estimating & measuring perimeter									
circumference									
Area, using concrete models									
Estimating & measuring area									
of squares, rectangle									
of parallelograms, triangles									
of irregular figures									
of trapezoids									
of circles									
surface area									
Relating area & perimeter									
Volume, using concrete models									
Estimating and measuring									
of rectangular prisms									
of other prisms									
of cylinders									
of cones, & pyramids									
Relating perimeter, area, volume									
Time									
Concept of a minute									
Concept of an hour									
Telling time to the hour									
Telling time to the half hour									
Telling time in minutes									
Estimating time									
Elapsed time									
Relating units of time									
Adding & subtracting units									
Using a calendar									
Money									
Coins, value of									
skip counting & counting on									
making change									
adding & subtracting									
Coins & Bills, value of									
counting & trading amounts									
making change									
Adding & subtracting money

Title: Ch3 TnrMan Script  
 Grade level: Adult  
 Subject: SF/MTT (TF) Transfer Wksp 4-5  
 Author(s): D. Schutte  
 Concept: Steps 4 - 5 TESD Flow Chart  
 Keys/Cross-refs: See D. Schutte, TESD Flow Chart  
 Note: Concepts here includes subordinate topics and subtopics.  
 Ref also to 4MAT Materials of B. McCarthy & Excel Inc.

Ref. Code: Flow Chart  
 Duration: 2 Days

— Overview —

8. TESD Flow Chart Steps 4 - 5

Aims, Goals, Outcomes:

To recall, consult resources, and organize propositional, procedural and conditional information about a specific identified concept (and its topics and subtopics) and compare it to what other children at similar age and grade levels in other countries learn in order to decide what Afghan children should learn if they are to have an equal educational opportunity in the modern world. Therefore, this information comprises what teachers should know and teach about the concept at the specific grade level under consideration.

[Note: This information will be selected for and collected in the Teacher's Academic Resource Book and will serve to educate unqualified and under qualified teachers concerning what to teach. It also serves as the basic resource for organizing and developing the Teacher's Guide (4MAT: Quadrant 2, Left Mode) and affects the selection or creation of Instructional Materials and Students' texts concerning the concept under consideration.

#### About the Author:

These Materials were developed by Dr. Donald G.W. Schutte. They were written for and modified during a Master Teacher Training Workshop held in Peshawar, Pakistan. This workshop was supervised by Dr. Schutte but conducted by trained Afghan Specialist Facilitators. They responded to the materials and suggested changes to them during the process of implementation. The facilitators full names are listed in the credits section of the introduction. Alphabetically, they are -- Amouzgar, Azizi\*, Bakhtari\*, Bandawal, Besmellah, Hekmaty, Najibullah, Najmi\*, Nedai\*, Sayeed, Sherzad, Sultani, Yadgari\*, Yusofzai. Those marked with an asterisk are Science and Mathematics specialists who actually conducted the workshop for Master Teacher Trainers. The other specialists are either Social Studies or Language Arts Specialists. Together, along with those conducting the workshop, they were busy during the workshop period translating this Trainers Manual into Dari and Pushtu.

At the time of the writing, Dr. Schutte, was a permanent Team Member of the University of Nebraska at Omaha, Education Sector Support Project. He was the Project's Teacher Training and Curriculum Design Coordinator.

Dr. Gerald Boardman, Chief of Party, and Professor Abdul Salaam Azimi, his Deputy lead the Project. It is sponsored by USAID. UNO/ESSP is a cross-border project supporting the reconstruction of the Afghan education. It is located in Peshawar, Pakistan.

### — Quadrant 1, Right mode —

**Outcome:** Each group of trainees within a subject specialty will identify the topics and subtopics associated with a concept they have agreed to develop using the TESD process. Specialist Facilitators will act as mentors to help groups divide a selected concept into topics and subtopics appropriate to the class level under consideration.

#### Trainer Directed Activities:

1. Trainer will distribute Handout 8.1 and 8.1.1, *Mind-Mapping Concept, Topic, Subtopic*.

2. Trainer will briefly explain the strategy of 'mind-mapping' using an example from Mathematics or Science, as appropriate, to mind-map a concept, topic, and subtopic with them.

3. Trainer will work with his appointed group to mind-map the concept with its subordinate topics and subtopics which the group has agreed to develop using the TESD process.

Evaluation:

Each subject specialty group will produce an agreed list of topics and subtopics for the concept it has selected.

### — Quadrant 1, Left mode —

**Outcomes:** Trainees will be able to name the three types of knowledge and identify the elements which make up 1. propositional (or declarative) knowledge, 2. procedural knowledge, and 3. conditional knowledge. Trainees will be able to use the K-W-L Strategy to identify "What they know", i.e. their personal knowledge, about the selected concept and each topic and subtopic and "What they would like to know or need to find out from other resources."

(The purpose of this is to begin to construct the specific academic and background knowledge and skills a teacher must have to be qualified to teach a particular concept. This information will become a unit related to a particular concept that will be included in a Teacher's Academic Resource Book (TARB). This information, in turn, is related to specific information that will be included in Q2, LM of the 4MAT Lesson Plan. This information also determines the substantive information that will be selected to be included in the student text.)

Trainer Directed Activities:

1. Trainer distributes Handout 8.2.

2. Trainees name the agreed concept, topics, and subtopics and follow the instructions on the Handouts. Trainees will use a K-W-L strategy to brainstorm about the selected concept and each topic and subtopic related to it. From this activity, trainees will determine *what they already know* about the agreed concept, topics and subtopics and *what they would like to know*. They need, with the help of the Specialist Facilitators to go to other resources to find out about them.

3. Trainees will work with Specialist Facilitator Mentors to produce their answers in written form. This will provide the basis for further production activities.

Evaluation:

Satisfactory discussion and written questions they want to find answers to about the concept in question.

— Quadrant 2, Right mode —

Outcomes: Trainees will produce a written analysis of the information resulting from Quadrant 1, dividing it into propositional, procedural, and conditional knowledge and skills.

Trainer Directed Activities:

1. Trainees will review the information from Quadrant 1 and distribute Handouts 8.2.1, 8.2.2, and 8.2.3.
2. Trainees will categorize in written form the information from Quadrant 1, dividing it into Propositional, Procedural, and Conditional Information. To aid them in making their decisions, Trainer will refer trainees to the elements of each type of information found in tabular form in Handouts 8.2.1, 8.2.2 and 8.2.3.

Evaluation:

Satisfactory classification and summary of *propositional, procedural and conditional* information concerning the concept, topics, and subtopics under consideration as determined by the Specialist Facilitator in agreement with each group's shared and declared expertise.

— Quadrant 2, Left mode —

Outcomes: Trainees decide a) what conceptual content students should learn in a specific subject at a specific grade level and, therefore, b) what specific conceptual and background knowledge a teacher should know in order to be qualified to teach Afghan learners a specific concept.

Trainees will use *advance organizers* to identify specific propositional, procedural and conditional information concerning the selected concept (with its subordinate topics and subTopics). Later it is to be used to prepare one specific concept unit in the Teacher's Academic Resource Book (TARB). From this information, trainees will select, at the appropriate time, the content for Q 2, L M of the 4MAT Lesson Plan. The Lesson Plan, in turn, will determine the cognitive and skills content of students' texts and instructional materials as well as statements of how, when and where the information (conditional information) is useful in real life.

Trainer Directed Activities:

1. Trainer will distribute Handouts 8.3 and 8.4 (on the reverse of 8.3) and monitor the following activity.
2. Trainer will review Handouts 8.3 and 8.4 with Trainees. These Handouts illustrate the use of an *Advance Organizer* as a thinking tool to analyze and organize the information which will be included in the TARB as Trainee begins to relate to and mentally connect the information to be presented in the student text and Q2 L M of the Lesson plan.
3. Trainer will distribute Handouts 8.5 and 8.6 (on the reverse of 8.5) and monitor the following activity.
4. From all the information collected about the agreed concept and its subordinate topics and subtopics (see Q 1, LM and Q 2, RM), Trainee will use the *advance organizer* model format to classify information and answer the questions which make up the headings of the columns on the model form.

Evaluation:

All columns on Handout 8.5 and 8.6 will be completed satisfactorily. *Satisfactory* here means that the subject specialty group and Specialist Facilitators have developed and use criteria to judge the worthiness of the response.

— Quadrant 3, Left mode —

Outcomes: Trainees will be able to select from the potential information they have summarized on Handouts 8.5 and 8.6 those items that are deemed to be relevant to be learned by Afghan children in the class level under consideration. The criteria of relevance here is that the substantive content concerning a concept and its subordinate topics and subtopics be sufficient but not at too great of depth and breadth of knowledge or skills for learners at the class level under consideration.

Trainer Directed Activity:

1. From the propositional and procedural information identified and categorized in the Model format (Q2, LM) select information relevant to the scope (depth and breadth knowledge and skill) that matches the mental and physical ages and stages of growth and development of the children at the class under consideration.
2. Trainees will summarize and reorganize the information (see 1, above) to include only that which they have selected as relevant to the class level under consideration.
3. Trainees will put the information (see 2, above) in a logical sequence. Sequencing should be related to both the logical sequence of content and the principles of learning involved.
4. Trainees will consider the need to do more in depth research on items selected to insure they have included both what they want children to learn and any background information and skills which needs to be included in the section of the Teacher's Academic Resource Book concerning this particular concept and its subordinate topics and subtopics.

[Reminder Note: Trainees should be reminded that the above mentioned information is to be included in the Teachers Academic Resource Book (TA RB) and the Student Text (ST). This allows *under-qualified* and *unqualified* teachers to be quickly trained and upgraded specifically in relation to concept content they are expected to teach. Trainees are also reminded that they are responsible for creating both the TARB and Student Text (ST) using the TotalEducation Systems Development Process. The ST is to be included as a supplement to the 4MAT Lesson Plan to provide a means for implementing the planned learning process with students. Pedagogical and assessment methods, strategies, and techniques that are to be used when the plan is implemented in the classroom are integral parts of the 4MAT Lesson Plan. As Trainees develop the lesson plan, therefore, they simultaneously construct the foundation for the further development of both a Teacher's Pedagogical Resource Book (TPRB) and a Teacher's Assessment and Evaluation Manual (TAEM). Both are specifically correlated with, and serve to illustrate, through application, the content to be taught as well as the learning outcomes to be achieved and assessed.]

Evaluation:

Information, summarised in written form, is deemed satisfactory when Specialist Facilitators and all subject specialist groups agree that it is.

### — Quadrant 3, Right mode —

**Outcomes:** Trainees will compare the choices they have made concerning the concept drawn from the *Concept Scope and Sequence* on behalf of Afghan children with those made by curriculum developers in other countries. Where there are differences, trainees will reconsider and revise or modify their choices as they deem necessary to ensure applicability to Afghan Children.

**Trainer Directed Activity:**

1. Trainer will provide sample resource books and other materials, e.g., audio and video tapes, from other countries. These will contain scope and sequence and content relevant to the specific concept, topics and subtopics under consideration by the trainees.
2. Specialist Facilitators will translate from English as necessary for understanding.
3. Trainees will compare the content they have selected for Afghan learners to learn about a specific concept and its related subordinate topics and subtopics at a particular class level. The comparison is to be made with similar content taught in other countries.

[Note: The substance will be culturally affected, however, the cognitive outline may be the same. For example, in social studies, a unit may concern the concept of 'family' with a subordinate topic of 'family values'. The substance of the lesson for Afghan learners would be 'AFGHAN FAMILY VALUES'. The substance of curriculum and instructional materials of other countries, on the other hand, would be specific to the country in question. However, in both cases learners will have learned about 'family' and 'family values' at similar levels of scope (depth and breadth) and sequence.

**Evaluation:**

Trainees and Specialist Facilitators are satisfied that they are ready to present the content of the concept unit they have selected to the whole group for discussion, validation - based on agreed criteria, and approval.

### — Quadrant 4, Left mode —

**Outcomes:** On the basis of the discussions (Q3, RM), Trainees will revise and prepare information in final form for the consideration and approval of the whole group. The materials will be comprised of information that later will be organized for presentation to students in student texts (ST) and in 4MAT Q2, L M of the Lesson Guide as well as the relevant section of the Teacher's Academic Resource Book (TARB).

**Trainer Directed Activity:**

1. Trainees will discuss with their Specialist Facilitator mentors and their own small subject specialty group the comparisons of content deemed appropriate for Afghan children with that which is taught to children in other countries. They will bring their final choices to the whole group to establish a consensus of 'experts'.
2. Trainees will revise and prepare final version of information that will provide the substance of information from which they will create Q2, L M of the Teacher's Guide, the Student Text, and the relevant

128

section of the TARB concerning the particular concept with its subordinate topics and subtopics under consideration.

Evaluation:

Agreement between Trainees and Specialist Facilitator that the version of the material is ready to be presented to the whole group for consideration, validation and approval as being satisfactory for Afghan children to learn.

#### — Quadrant 4, Right mode —

Outcomes: Whole group will agree that the information which has been developed for this concept and its subordinate topics and subtopics meet the following qualitative criteria:

1. It is of sufficient, but not excessive, quantity.
2. It is written at a level of depth and breadth appropriate for the grade level of the child under consideration.
3. It maintains a high standard of language usage.
4. It is organized in a form that is suitable for publication.

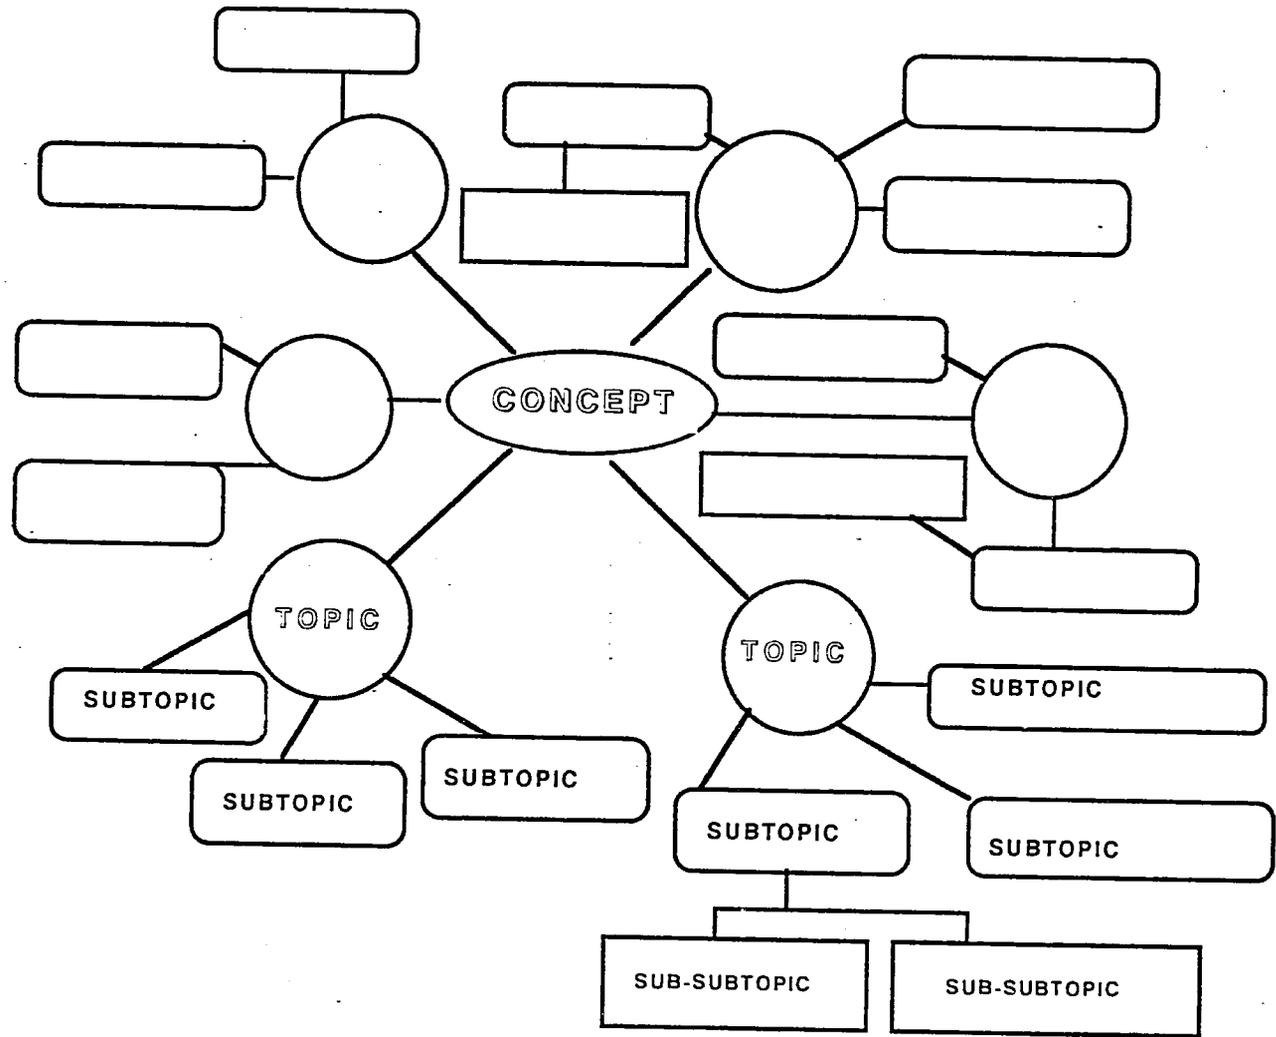

Trainer Directed Activity:

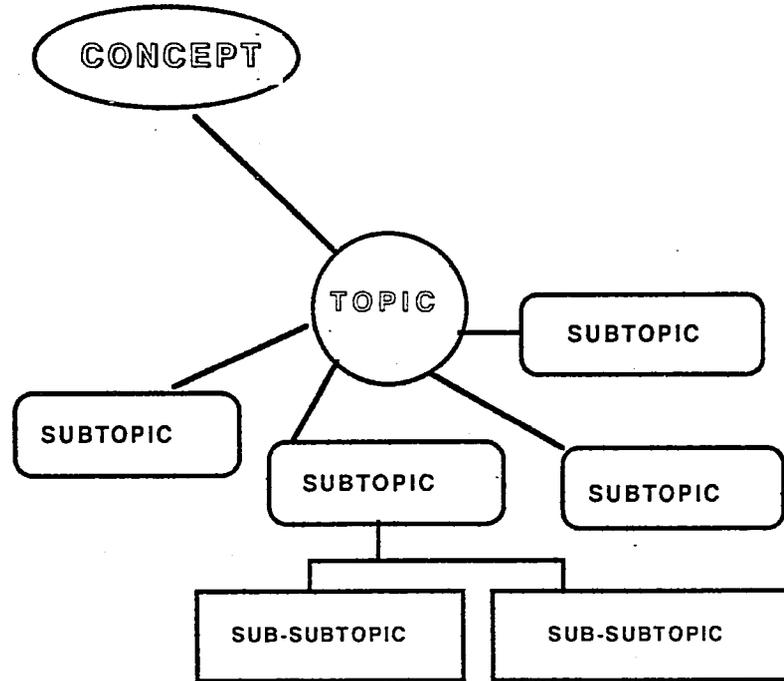

1. Trainer will act as discussion Chairman. Trainer will develop criteria that the group will use to judge the appropriateness of the material presented by the Trainees. The criteria at least should include the four points given in this Quadrant under Outcomes (see above).
2. Trainees will present the final draft form of information (see Q4, L M, above) for the consideration of the whole group. Using the criteria they have developed, trainee will answer the questions raised by the large group and record their suggestions for further reference.
3. Based on the suggestions received in the discussion, if necessary, Trainees will revise and prepare the final version of the substantive concept content that is to be used in the next phase of development.
4. Trainees should retain one copy of the final version and give the original to the Specialist Facilitator.
5. Trainer will keep materials on file organized according to and correlated with the Concept Scope and Sequence.

Evaluation:

Approval of the Specialist Facilitator and agreement by whole group of trainees, acting as *subject specialist experts*, that the final version concerning the concept under consideration and the scope and sequence is a) appropriate for Afghan children, b) ready to be used to develop the Teacher's Lesson Guide and c) ready to be used to create the Teachers Academic Resource Book.

Mind Mapping Selected Concept Scope and Sequence

Deciding What To Teach: Three Types Of Information

**PROPOSITIONAL OR DECLARATIVE  
INFORMATION**

Identify facts  
Relate facts to make generalizations & abstractions and Identify types: --  
Classifications [families]  
Criteria [judgment standards]  
Guess or Conjecture [assumed relationship without evidence]  
Principles  
[facts related by evidence]  
Rules  
[principles which guide action]  
Theories  
[principles related by evidence or a priori beliefs]  
Axioms  
[theories put into action]  
Laws: Social & Natural  
[tested & proven theories]  
Universals  
[laws true at all times & places]  
Identify Trends & Sequences  
[Step-by-step changeover time]  
Identify Terminology  
[Special vocabulary used to name, describe, or explain above]

Identify Subject Methodology  
Identify Conventions  
[usual ways of dealing ]

Title: Ch 4 Trns Manual Script  
 Grade level: Adult  
 Subject: SF/MTT(TF) Tnsf Wksp 6, 6.1  
 Author(s): D Schutte  
 Concept: Steps 6, 6.1, TESD Flow Chart 4MAT\* as Mat. Dev. "Flywheel"

Ref. Code: Flow Chart  
 Duration: 3 days

Keys/Cross-refs: See D. Schutte, TESD Flow Chart 4MAT and 4MATION Developer are registered trademarks of Excel Inc. & B. McCarthy, Barrington, IL. See also 4MAT Materials list.

— Overview —

9. TESD Flow Chart Steps 6 & 6.1

Aims, Goals, Outcomes:

This is the step at which Trainees begin to create the Teachers Lesson Guide for a specific concept with its subordinate topics and subtopics. During the foregoing activities, Trainees have collected much propositional, procedural, and conditional information about a specific concept. In addition to the lesson plan (4MAT Cycle) contained in the Guide, as appropriate and

necessary, Trainees will create at each step in the flow chart 1) instructional materials and aids for teachers, 2) student texts and learning aids, 3) assessment techniques, tests and tools which will become the Teachers Continuous Assessment Resource Book, and 4) applied *proactive* pedagogical and classroom management methods, strategies, and techniques which will form the basis for writing a Teacher's Pedgogical Resource Book. Both 3 and 4 are cross-referenced to specific lessons plans to demonstrate situations for practical applications.

At this point, Trainees will be able to place the concept with which they are concerned at center of the 4MAT Cycle. From Trainees' professional knowledge and intuition, they will select the particular knowledge about that concept which they want students to learn at the specific grade level with which they are concerned. Trainees will write an overview containing the learning aims, goals, and outcomes related to the concept with which a specific lesson is concerned. The 'learner-centered' overview becomes the substantive guide to the teaching content which Trainees must relate to each element of the 4MAT Lesson Plan cycle.

About the Authors:

These Materials were developed by Dr. Donald G.W. Schutte. They were written for and modified during a Master Teacher Training Workshop held in Peshawar, Pakistan. This workshop was supervised by Dr. Schutte but conducted by trained Afghan Specialist Facilitators. They responded to the materials, suggested changes to them, and did initial translations during the process of implementation. The facilitators full names are listed in the credits section of the introduction. Alphebetically, they are Amouzgar, Azizi\*, Bakhtar\*, Bandawal, Bismillah, Hekmaty, Najibullah, Najm\*, Nedai\*, Sayeed, Sherzad, Sultani, Yadgari\*, Yusofzai. Those marked with an asterisk are Science and Mathematics specialists who actually conducted the workshop for Master Teacher Trainers. The other specialists are either Social Studies or Language Arts Specialists. Together, along with those conducting the workshop, they were busy during the workshop period translating this Trainers Manual into Dari and Pushtu.

At the time of the writing, Dr. Schutte, was a permanent Team Member of the University of Nebraska at Omaha, Education Sector Support Project. He was the Project's Teacher Training and Curriculum Design Coordinator.

Dr. Gerald Boardman, Chief of Party, and Professor Abdul Salaam Azimi, his Deputy lead the Project. It is sponsored by USAID. UNO/ESSP is a cross-border project supporting the reconstruction of the Afghan education. It is located in Peshawar, Pakistan.

### — Quadrant 1, Right mode —

Outcomes: Trainees will study the 4MAT Lesson Planning Cycle. They will be able to visualize the concept they have selected at the center of the 4MAT circle. They, therefore, will begin to associate the four learner styles and the idea of right and left mindedness with any concept they want to develop as well as the action plan necessary to teach it so that all students learn it.

Trainer Directed Activities:

1. Trainers will distribute Handouts 9.1 and 9.2. (9.2 is on reverse side of Handout 9.1).
2. Trainees will study Handout 9.1 until they are able to close their eyes and visualize the eight segments of the 4MAT Cycle, the action words, and the Overview Oval in which a concept is to be placed at the center of the 4MAT Circle.
3. Trainees will turn to Handout 9.2 and fill in the blank spaces from memory.
4. Trainers will ask Trainees in 'think-pair-share' group to make written statements to indicate the relationship between the *action word* associated with each 4MAT segment and any concept placed in the center of the 4 MAT circle. At this point in the workshop, these statements will be general, i.e., not related to the specific concept Trainees have selected to develop. The purpose here is to get trainees to think about the existence of a relationship between the substance of whatever they want students to learn and want to teach and the type of activity planned according to learning styles and left/right mindedness.

For example: [Note: *Concept* as it is used here includes topics/subtopics.]

Trainees may say the following or something similar:

"In Q1,RM, the lesson must connect learners personally with a concept."

"In Q1,LM, the lesson must allow learners to reflect on, analyze or examine the personal connections which they have made with a concept."

"In Q2,RM, the lesson must allow learners to make an image of the broader implications of a concept beyond their own personal experience of it.

"In Q2,LM, the lesson, for and with learners, must define and organize the concept in relation to its integral structure." [Trainer Note: Traditionally, this is the point in the lesson that the Teacher transfers the information about a concept that they want to learners to know. To transfer information is the purpose of all traditional teaching. TESD and 4MAT go beyond simple transfer to focus on the learner as client and user of the information transferred.]

"In Q3,LM, the lesson must provide the opportunity for the learner to practice or tryout the concept in some way"

"In Q3,RM, the lesson must go beyond practicing or trying out what they have been taught. Learners' exploration and experimentation with the concept should allow them to add something of themselves to its use. At this point learners begin to take ownership of the concept."

"In Q4,LM, the lesson promotes learners' exploration and experimentation of the concept in terms of evaluating the new knowledge and assimilating it with their prior knowledge and newly discovered applications."

"In Q4, RM, the lesson promotes learners' application in more complete real life situations. Learners are encouraged to teach it or about it to others. They claim ownership and expose their knowledge of the concept to others.

Evaluation:

Trainees make valid relational statements. Validity is agreed by peer group and Specialist Facilitators according to identified characteristics which can be used by individual Trainees as criteria to judge the validity of their development work in the future.

### — Quadrant 1, Left mode —

Outcomes: Trainees will define or state the 'purpose' questions that underlie a lesson that is constructed to accommodate each learning style and relate these questions in a general statement to the Concept placed at the center of the 4MAT circle.

Trainer Directed Activity:

1. Trainer will distribute Handout 9.3. This handout contains the 'purpose' questions that motivate the activity in each quadrant. The basic questions for the learner which teachers' lesson must answer are:

Q1, R&LM -- "Why must I learn this concept?" "What does it mean to me personally?"

Q2, R&LM -- "What is this concept all about?" "What is its structure?"

Q3, R&LM -- "How does this concept work?" "How can I experiment with it to find out how it works?"

Q4, R&LM -- "What if...?" "What can I do with this concept in real life? How can I apply this concept in real life?"

2. Trainees will review the statements made in Q1, RM to see that the concept at the center of the 4MAT circle is "this concept" spoken of in the questions above.

3. Trainer will make trainees aware of the following. Each lesson is created to implement the 'action' words, e.g., "connection", "examine", "image", "define", "tryout", "evaluate" and "integrate". *Action words* underlie lesson activity in each quadrant. By using action words and answering basic purpose questions when planning and presenting their lessons to, for and with learners, Trainees and Teachers will have automatically honored the four learning styles and brain hemisphere preferences exhibited by learners in their classrooms.

Evaluation:

Statements and questions are accepted as valid by the group and the specialist

facilitator mentors. Criteria for validity: Do statements relate action words and purpose questions to a concept at the center of the 4MAT circle. Are all Trainees able to do it? Are peers able to teach those in the group who are still having difficulty understanding or doing what they are supposed to do?

### — Quadrant 2, Right mode —

Outcomes: Trainees will be able to demonstrate their mastery of the information concerning 4MAT contained in Handout 9.4 and visualize any concept at the center of the 4MAT cycle.

Trainer Directed Activity:

1. Trainees will review 4MAT Cycle to ensure mastery of information contained in Handout 9.4. *The 4MAT Model, An Overview*.
2. Trainer will form 'cooperative groups'. Each Trainee group will write a set of question which if answered correctly will ensure the respondent has mastered all aspects of the 4 MAT Lesson Plan Model and is able to visualize a concept and its subordinate topics and subtopics placed at the Center of the 4MAT Cycle. Each group will write a set of prepared answers.
3. Trainer will review the questions and prepared answers to ensure the questions are appropriate and the prepared answers are correct.
4. Groups will exchange sets of questions with other peer groups whose members will answer the questions and check their answers by referring to the answers initially prepared by the Trainees. If significant differences emerge during the oral discussion between trainees' answers and the answers given by the group who originally prepared them, Trainers have the opportunity to clarify misunderstandings.
5. Trainer and Trainees will consolidate and summarize the questions and answers. After the whole group has agreed that these questions and answers are valid, Trainers will publish them as a model to be used in future training workshops.

Evaluation:

Group agreement that the questions raised and the answers given in relation to Handout 9.4, *The 4MAT Model: An Overview* are valid. Product Outcome = A validated, published summary statement.

### — Quadrant 2, Left mode —

Outcomes: Trainees will be able to define and explain how the placing of a selected concept with its subordinate topics and subtopics at the center of the 4MAT Lesson Planning Cycle affects overall education systems' development. They will indicate that placing the concept at the center of the 4MAT circle provides the basis for efficient and effective development of a) specific lesson plans and guide development, b) teaching and learning materials and pedagogical methods directed toward achieving specific learning outcomes in 'proactive', managed classroom settings, and c) assessment strategies and techniques. These, in turn, provide an educationally sound foundation for i) a supervision system that begins with the Head Teacher as the Resident Supervisor in each school and ii) a sound management system that measures the efficiency and effectiveness of all administrative inputs and activities by how well they achieve intended learning outcomes, in the short term, and the intended social consequences in the long term.

Trainer Directed Activity:

1. Trainer will distribute Handout 9.5, Schutte's Total Education Systems Development (TESD) Model (logo).
2. Trainer will lead a large group discussion in which all aspects of the model are discussed and Trainees identify their roles as producers of lesson plans, teachers guides, learning materials, and assesment tools and processes as well as their roles as Trainers and Supervisors.
3. Trainers will ensure that Trainees understand that the TESP model includes 4MAT, a registered trademark of Excel, Inc. and Bernice McCarthy of Barrington, Illinois. TESP, however, goes beyond lesson planning to total education systems development. Because 4MAT was developed in the United States, the assumptions that underlie its use as a model to develop lesson/unit plans are different from those when it is used as a vehicle or 'flywheel' of total education systems development.
4. Trainer will distribute Handout 9.6, *Mini-Lecture -- 4MAT As A Vehicle of Development Within TESP*.
5. Trainer will distribute Handout 9.7. It is a blank form to aid Trainees in taking 'compare-contrast' notes while studying the 'mini-lecture' (Handout 9.6). The form identifies categories which become criteria to used to compare and contrast 4MAT applications in USA with TESP as it is used in this workshop.
6. Using the *Think-Pair-Share* strategy, Trainees will read the 'mini-lecture' and think about what they have learned in this workshop. Trainers will use Handout 9.7 to encourage Trainees to analyze and to compare and contrast, according to identified criteria, the likenesses and differences between the use of 4MAT as a Lesson Planning Tool in the USA and as a part of the TESP package in the UNO/ESSP project.
7. Trainer will lead the large group discussion and will summarize group comparisons on chalkboard. Trainees will appoint one of their number to record chalkboard notes as a part of a permanent file which will become a part of the workshop record and used as a reference in future workshops.

Evaluation:

Group and Specialist Facilitator agree on summary statement. The summary should be organized around the criteria headings found in Handout 9.7. The summary must reflect the essential information contained in the 'mini-lecture' notes and the group discussion. The statement should confirm the need to place a specific concept with its subordinate topics and topics at the center of the 4MAT cycle in order to promote total development of the education system and so that trainees define their responsibility to use TESP to systematically fulfill their role in the reconstruction of the Afghan education system.

— Quadrant 3, Left mode —

Outcomes: Trainees will choose information concerning the selected concept with its subordinate topics and subtopics. They will write an overview statement to cover scope and sequence of all

144

knowledge and skills learners should learn about that concept they have selected to develop at the particular grade level concerned. The overview statement should include aims, goals, and outcomes to be achieved. Trainees will be able to differentiate among the following terms: 'Aims', 'Goals', 'Outcomes', 'Objectives', 'Purpose' as these terms are defined in the TESD process.

Trainer Directed Activities:

1. Trainer will distribute Handout 9.8, *Overview: 4MAT Form 'O'*

(Trainer Note: In order to keep a record of Production, This Form 'O' will eventually be completed in three languages, Dari, Pushtu, and English for every lesson unit. At this point in the workshop, only the "Overview" portion of the form will be completed. Here Trainees are still dealing with the problem of relating concepts to the 4MAT cycle, but at the same time they are making progress toward actual production of a lesson unit concerning a specific concept.)

2. Trainer will distribute Handout 9.9, *Differentiated TESD Terms*. Trainees will discuss the definitions of the terms given on the Handout and apply those definitions to TESD. (Trainer Note: All of our inputs and activities are to be directed towards achieving specific learning outcomes with Afghan learners.)

3. Trainer will provide specialty groups with time to prepare an overview, drawing on the information they have gathered in relation to the concept (with its subordinate topics and subtopics) which they have selected to develop. As a thinking tool to write an overview, Trainees will change the definitions given on 9.9 into specific questions concerning their selected concept. The answers to these questions will provide the foundation for the overview statement. Trainees may mind-map their questions and answers and, then, formulate a summary to become the overview statement. The overview statement will guide the remainder of 4MAT Lesson Plan and Lesson Guide Activities as these activities concern developing the concept they have selected to develop.

Evaluation:

Group and Specialist Facilitator agreement that the overview statement regarding the selected concepts reflects the aims, goals and learning outcomes which should be achieved by learners at the grade level concerned.

### — Quadrant 3, Right mode —

Outcomes: Trainees will formulate questions similar to the questions they asked in Q1,LM; however, this time the questions should be asked about the specific concept they have selected to develop and for which they have written an overview statement. They will, therefore, have begun to relate the action words and the underlying purpose questions for each segment of the 4MAT Cycle to the particular concept that they are going to develop.

Trainer Directed Activities:

1. Trainer will review with Trainees the general questions from Q1, R&LM. Trainer will divide trainees into Think-Pair-Share groups. Trainees will be asked to relate the general questions to the specific concept for which they have written an overview statement; thus, making the general questions specific to development of the concept. See examples below:

From Q1, RM. In General Trainees may say the following but specifically, as a tool for thinking they substitute the particular concept they wish to develop.

**Instruction:** Trainees will substitute the specific concept they want to develop in the blank in each of the following sentences.

"In Q1, RM, the lesson must connect learners to the \_\_\_\_\_ (*Concept*)."

"In Q1, LM, the lesson must allow learners to reflect on, analyze or examine the personal connections which they have made with the \_\_\_\_\_ (*Concept*)."

"In Q2, RM, the lesson must allow learners to make an image of the \_\_\_\_\_ (*Concept*) beyond their own personal experience of it to its broader implications."

"In Q2, LM, the lesson, for and with learners, must define and organize the \_\_\_\_\_ (*Concept*) in relation to its integral structure." [Trainer Note: At this point, Teacher teaches learners what they want them to know about the concept. This is the point of all traditional teaching.]

"In Q3, LM, the lesson must provide the opportunity for the learner to practice or tryout the \_\_\_\_\_ (*concept*) in some way"

"In Q3, RM, the lesson must go beyond practicing or trying out what they have been taught. It should promote learners' exploration and experimentation of the \_\_\_\_\_ (*Concept*) that will allow them to add something of themselves to its use. At this point learners begin to take ownership of the \_\_\_\_\_ (*Concept*)."

"In Q4, LM, the lesson promotes learners' exploration and experimentation of the \_\_\_\_\_ (*Concept*) in terms of evaluating their new knowledge and prior knowledge with newly discovered applications."

"In Q4, RM, the lesson promotes learners' integration of the \_\_\_\_\_ (*Concept*) to more complete real life situations and encourages teaching it or about it to others, i.e., exposing one's knowledge of the \_\_\_\_\_ (*Concept*) to others. At this point, learners claim complete ownership of the \_\_\_\_\_ (*Concept*)."

Q1, R&LM -- "Why must I learn this \_\_\_\_\_ (*Concept*)?" "What does this \_\_\_\_\_ (*Concept*) mean to me personally?"

Q2, R&LM -- "What is this \_\_\_\_\_ (*Concept*) all about?" "What is the integral organization and structure of propositional, procedural, and conditional information concerning this \_\_\_\_\_ (*Concept*)?"

Q3, R&LM -- "How does this \_\_\_\_\_ (*Concept*) work?" "How can I experiment with this \_\_\_\_\_ (*Concept*) to find out how it works?"

Q4, R&LM -- "What if...?" "What can I do with this \_\_\_\_\_ (*Concept*) in real life?" "How can I apply this \_\_\_\_\_ (*concept*) in real life and share my ownership of it with others?"

3. A summary of questions about specific concepts will be made and shared with the whole group. They are to be used as thinking tools to help develop the 4MAT plan leading to the lesson guide and other instructional and resource materials during the next phase of development.

Evaluation:

Agreement among Trainees and Specialist Facilitators that the questions are valid. Agreement that this set of questions must be answered about each concept with its subordinate topics and subtopics if they are to develop and reconstruct the total education system.

— Quadrant 4, Left mode —

Outcomes: From all the propositional, procedural, and conditional information Trainees have gathered concerning the concept they have selected to develop and about which they have written an overview, they will decide what particular information is to be included in Quadrant 2, Left Mode. Trainees will compare their choices to similar information contained at the same class level in resource books used in other countries concerning the same concept, topics, and subtopics.

Trainer Directed Activities:

1. Trainer will review with trainees all the propositional, procedural, and conditional information they have collected concerning the selected concept with its subordinate topics and subtopics.
2. In small groups Trainees will choose the information in order to present the integral structure of the concept which they will organize, in the next phase, as a part of the Lesson Plan and Teachers Guide for Q 2, LM.
3. Trainees will compare their choices with similar information prepared concerning the same concept, topics, and subtopics in other countries, as well as those previously used in Afghanistan, and make any changes deemed necessary to make the information used compatible with the ages, stages of growth and development, learning styles and brain hemisphere preferences planned for Afghan learners.

Evaluation:

Preparation of a summary of information that is to be used in the next phase in Q 2, LM after agreement by the group as a whole.

— Quadrant 4, Right mode —

Outcomes: Trainees will share the product of Q 4, LM with the group as a whole and will agree that it is appropriate to be organized, included in the lesson plan and teachers guide, student text and presented to learners at the class level concerned.

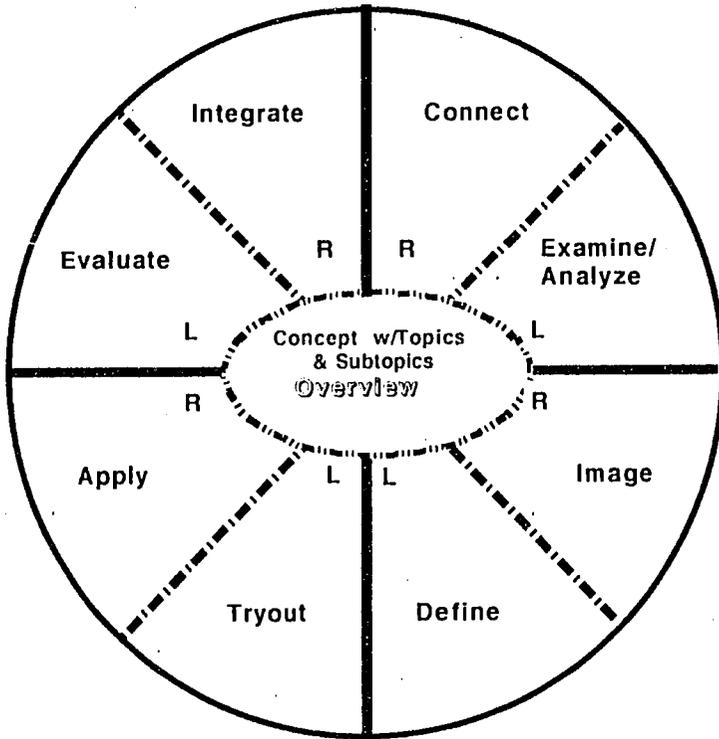

Trainer Directed Activities:

1. Trainees will select a group leader to present a summary of the information from Q4,LM to the group as a whole.
2. Trainer will monitor group discussion and record the information and will achieve a consensus as to the content that will be used in the next development step.

# TOTAL EDUCATION SYSTEMS DEVELOPMENT

By Dr. Donald G. W. Schutte

\*4MAT IS REGISTERED TRADEMARK OF BERNICE McCARTHY & EXCEL, INC.

Mini-Lecture --  
4MAT As A Vehicle of Development Within TESD

Note that the TESD model includes the 4MAT Lesson/Unit Planning Model that is a registered Trademark of Excel, Inc. and Bernice McCarthy of Barrington, Illinois. TESD goes beyond lesson planning, however, to total education systems development. Because 4MAT was developed in the United States, the assumptions that underlie its use as a model to develop a lesson plan or unit are different from those when it is used as a vehicle to focus educational systems development. In order to understand your role as curriculum and textbook developers in addition to your role as trainers and trainers of trainers, it is important that you know the difference between developing a lesson plan and developing an educational system. Use what you have learned to this point in the course; the information in this 'mini-lecture'; and Handout 9.7, to compare and contrast *advance organizer* to compare the differences between 4MAT as a Lesson/Unit planning device and as a focus for Total Education Systems Development.

A. TEACHERS' ACADEMIC QUALIFICATIONS

In the USA large numbers of Teachers are more highly qualified academically than in Afghanistan. The scarcity of qualified Afghan teachers is due largely to the war with the Soviets and its aftermath. Therefore, if the Afghan educational system is to be rapidly reconstructed, teachers' academic knowledge and skills must be upgraded. TESD makes this possible by providing for the development of a Teacher's Academic Resource Book (TARB). The TARB is to be used in pre-service and in-service educational training as well as individual in-school, in-service study by Teachers and Head Teachers. The TARB contains propositional, procedural and conditional knowledge and skills information related to specific concepts, topics, and subtopics drawn from an agreed *Concept Scope and Sequence* document.

B. TEACHERS' PEDAGOGICAL QUALIFICATIONS

In USA large numbers of Teachers are more highly qualified pedagogically than in Afghanistan. Again, This is largely due to the disturbances caused by the war and its aftermath to a system which was in the process of modernization when the war began. 4MAT is one system used to introduce American Teachers to the need to plan and use modern pedagogical strategies to teach students with different learning styles and brain hemisphere preferences. The prior professional qualifications of American teachers supplement new pedagogical knowledge and skills when they are introduced in in-service or pre-service courses.

The level of professional qualifications of most Afghan teachers is low. Introducing 'proactive' pedagogical methods, strategies and techniques is, therefore, to provide Afghan Teachers with foundation rather than supplemental professional knowledge and skills. TESD provides the framework to introduce Afghan teacher to new pedagogical knowledge and skills by introducing them into the Lesson Plan at each stage of the 4MAT cycle. This will give Afghan Teachers the sound foundation of pedagogical knowledge and skills they need to rebuild the educational system.

### C. UNION OF CONTENT WITH PEDAGOGY

For too long in education courses around the world, including the USA and Afghanistan, methods, strategies and techniques have been generalized. They are seldom related specifically, practically, and systematically to the content a Teacher is expected to teach. TESD makes a marriage of content and up-to-date pedagogy. This is not an inherent part of 4MAT. 4MAT emphasizes and establishes the need for using "right mode" methods. The system provides a list of typical "right mode" strategies and techniques which leads to studying them; however, training concentrates on using 4MAT to plan a lesson, not on training Trainees to use specific pedagogical strategies and techniques to teach a specific lesson.

### D. TEACHERS ACCESS TO ACADEMIC & PEDAGOGICAL RESOURCE MATERIALS

In the USA, 4MAT is used for planning and, in this case, planning a lesson or unit. That is its purpose. The use of 4MAT within TESD provides the framework in which the union between specific content and specific pedagogy can take place and academic and pedagogical training initiated. Specific concepts with their subordinate topics and subtopics are at the center of the 4MAT cycle. Attention, therefore, is paid to the most efficient and effective strategies or techniques to be used for teaching specific content to learners with different learning styles and brain hemisphere preferences. This provides the further opportunity to develop a Teachers Pedagogical Resource Book (TPRB). Such a TPRB, thus, will be available for use in pre-service and in-service training as well as private and in-school, in-service study by Teachers and Head Teachers. The TPRB becomes the means by which the pedagogical knowledge and skills of unqualified and under qualified Teachers and Head Teachers can be quickly upgraded as they develop and teach the academic content following a 4MAT Cycle Lesson Plan and Teachers Guide.

### E. DEVELOPMENT OF PERSONNEL

4MAT is used to plan lessons in the USA. It is assumed that there are sufficient numbers of trained and qualified persons to do the job. Trained and fully qualified Teachers, Head Teachers, Supervisors, and Administrators are scarce resources in Afghanistan. TESD uses the 4MAT Cycle as a means -- the quickest means -- to focus academic and professional development of all personnel in the system, as well as all other administrative and management inputs and activities, on the teaching and learning tasks that must be accomplished if specific learning outcomes are to be achieved with Afghan learners.

### F. CONCEPT SCOPE AND SEQUENCE

In the USA teachers are working within an established scope and sequence. It is backed up by adequate resources including audio/video and print materials concerning any content they want to teach. Often teachers do not even refer to the scope and sequence statement. Instead they used books and materials that are set out according to a scope and sequence statement. Textbook indexes thus become a substitute for the scope and sequence statement.

None of these is available in Afghanistan. TESD i) begins with the establishment of a *mission statement* that guides all activities, ii) develops and suggests an established *Concept Scope and Sequence*, iii) names and explores internal and external relationships between and among the propositional, procedural and conditional information and skills related to each concept with its subordinate topics and subtopics, iv) places each concept at the center of the 4MAT circle, v) develops a lesson plan and teachers guide compatible with teaching specific concept content to learners with four learning styles and brain hemisphere differences, vi) uses pedagogically sound research-based pedagogical methods, strategies and techniques, and vii) develops continuous assessment and evaluation tools and techniques for each of the eight segments of the 4 MAT cycle. As personnel are trained to activate and follow this flow of development activity, they gain the capacity to further develop themselves and the education system academically and professionally.

#### G. PRE-SERVICE AND IN-SERVICE TRAINING COURSES

In the USA when 4MAT is used in pre-service or in-service training courses, it is basically for the purpose of training teachers to use a systematic method of lesson planning based on catering to children who have different learning styles and brain hemisphere preferences. In Afghanistan, 4MAT is used in in-service courses as a means to focus Total Education Systems Development. Later, it is hoped that TESD, including the 4MAT focus, will be used in Teacher Training Colleges and the University to develop pre-service courses for primary, secondary, and tertiary educators.

### Differentiated TESD Terms

1. Aim is conceiving an intended goal, usually outside oneself, as well as conceiving the procedures to attain it.
2. Goal is that which one wants to achieve as an end result of effort.
3. Objectives are the step by step procedures conceived and implemented to achieve one's intended goal.
4. Outcome is the goal that is achieved as intended or as per conceived aim.
5. Result or Output is anything that happens as a result of trying to achieve an intended goal. This necessarily includes outcome, but it is outcomes that we want to achieve.
6. Why do all the above? That is the purpose.

 Duration: 1 day

— Overview —

10. TESD Flow Chart Step 6.2

Aims, Goals, Outcomes:

Trainee will use the 4MAT Cycle to make a lesson plan and develop a teachers guide about the concept they have selected to develop. Trainees will review the overview statement and the propositional, procedural, and conditional information which the group, in previous activities, agreed was appropriate for learners at this class level concerning this concept. Trainees will organize the information that is to be included in Q2,LM in terms of the substance and structure

159

to be taught to learners. Trainees will state the reasons they must begin the 4MAT lesson plan with Q2,LM during the planning phase in contrast to when they teach the planned lesson to learners. At that time they will begin teaching the lesson at Q1,RM.

#### About the Authors:

These Materials were developed by Dr. Donald G.W. Schutte. They were written for and modified during a Master Teacher Training Workshop held in Peshawar, Pakistan. This workshop was supervised by Dr. Schutte but conducted by trained Afghan Specialist Facilitators. They responded to the materials, suggested changes to them, and did initial translations during the process of implementation. The facilitators full names are listed in the credits section of the introduction. Alphabetically, they are Amouzgar, Azizi\*, Bakhtari\*, Bandawal, Besmellah, Hekmaty, Najibullah, Najmi\*, Nedai\*, Sayeed, Sherzad, Sultani, Yadgari, and Yusofzai\*. Those marked with an asterisk are Science and Mathematics specialists who actually conducted the workshop for Master Teacher Trainers. The other specialists are either Social Studies or Language Arts Specialists. Together, along with those conducting the workshop, they were busy during the workshop period translating this Trainers Manual into Dari and Pushtu.

At the time of the writing, Dr. Schutte, was a permanent Team Member of the University of Nebraska at Omaha, Education Sector Support Project. He was the Project's Teacher Training and Curriculum Design Coordinator.

Dr. Gerald Boardman, Chief of Party, and Professor Abdul Salaam Azimi, his Deputy lead the Project. It is sponsored by USAID. UNO/ESSP is a cross-border project supporting the reconstruction of the Afghan education. It is located in Peshawar, Pakistan.

#### — Quadrant 1, Right mode —

Outcome: Trainees will recall and keep in mind the contents of the more comprehensive statement about the concept they have selected to develop that were written in previous training sessions. Trainees will write an abbreviated form of the statement on the 4MAT cycle form.

#### Trainer Directed Activities:

1. Trainer will distribute Handout 10, *Lesson Plan Development Form: 4MAT Cycle: Brief Overview and Outcomes Statement*. This form is based on the 4MATion Developer. (4MATion Developer is a registered trademark of Excel, Inc., and Bernice McCarthy of Barrington, IL.)
2. Trainee will write a brief summary of the overview statement in the space provided at the center of the 4MAT circle.

#### Evaluation:

A valid brief Overview statement, including aims, goals and intended overall outcomes. Validity of the statement for the concept being developed must be agreed by whole group of Afghan Master Trainers and Specialist Facilitators.

### — Quadrant 1, Left mode —

Outcome: Trainees will analyze the *activity box* on the Flow Chart, Step 6.2, to identify the types of activities that are appropriate for organizing, structuring and systematically presenting information to learners at the Q2,LM lesson point. This information in this box must guide the Trainees' eventual choice of activities that will insure that the concept is well formulated and organized for, with, and by learners.

#### Trainer Directed Activities:

1. Trainees will review the *activity box*, see Flow Chart, Step 6.2, to study the type of activities that are appropriate at the Q2,LM stage of the 4MAT Cycle.
2. Trainees will choose the strategies and techniques to be used to organize, structure, and present the structure of the concept with its topics and subtopics to, by, for and with learners. One of the common strategies often used at this point in the 4MAT Cycle is describe by ASCD in their *Teaching Strategies Library Series of Videotapes and Print Materials*. It is called the *Mastery Lecture Strategy*. Traditionally, this is the point in the learning cycle where Teachers directly teach the academic knowledge and skills they want learners to know about a specific concept under consideration.
3. Trainer will distribute Handouts 10.1.1 and 10.1.2a and 10.1.2b. Trainees will study the *Advance Organizer* pattern to develop a *Mastery Lecture* about the concept they have selected to develop for Q2,LM. Trainees will develop the type of information described in the Flow Chart activity box, Step 6.2. Trainees will set this information out in the pattern described in the *Advance Organizer*. As aids to developing Q2,LM, Trainees will use the two thinking tools provided. Handout 10.1.2a is a product of the State of Maryland's Department of Education. It is called *Questioning for Quality Thinking*. It relates directly to the section on the *Advance Organizer* which calls for developing questions. Handout 10.1.2b is called *Strategies to Extend Student Thinking*. It should be considered when developing the pedagogical aspects of Q2,LM. When Trainees are familiar with the patterns on all Handouts, they are ready to develop Q 2,LM.

#### Evaluation:

Trainees agree with each other and Specialist Facilitator on the types of activities that are appropriate to use when developing Q2,LM for learners and teaching it to them. This means primarily Trainees know from memory the types of activities from which they can choose. These are mentioned in the *activity box* on the Flow Chart, Step 6.2. Trainees will be able to name, describe the information found in Handouts 10, 10.1, 10.1.1 and 10.1.2 a and 10.1.2 b and explain to each other how to use it to develop Q2,LM Lesson Plan and Teachers Guide.

### — Quadrant 2, Right mode —

Outcome: Trainees will broaden their perspective with regard to *Mastery Lecture* development patterns related to the concept they have selected to develop.

#### Trainer Directed Activities:

1. The *Mastery Lecture* (ML) strategy uses an *Advance Organizer* both as a planning tool for the teacher and as a means of developing a similar *Advance Organizer* tool to be used by learners to promote long term memory learning. Use Handouts 10.1.1 and 10.1.2 as thinking tools to introduce Trainees to the ML strategy. Note in the "Providing Information" Section of 10.1.1, information from the *activity box*, Step 6.2, has been included in order to bring together aspects of 4MAT and ASCD's *Mastery Learning* strategy. Also because the ML strategy calls for different types of questions to be included as a part of

the plan, Handout 10.1.2a and 10.1.2b were included for Guidance. These handouts were developed for teachers and published by the State of Maryland, Department of Education. The question categories reflect the work of Bloom et al concerning the *cognitive domain*.

2. Trainees a) will review propositional, procedural and conditional information collected in previous exercises concerning the selected concept and b) will use the Master Lecture Strategy to organize that information. Trainees will ensure that the type of information included about the concept and its subordinate topics and subtopics is the type mentioned in the activities box on the Flow Chart, Step 6.2. Trainees' will also plan to use 'high level' questions to promote learners' thinking and to assess whether learners have formulated the concept.

Evaluation:

Group agreement that Trainees: a) are ready to write brief and expanded outcomes for their selected concept, b) are ready to name, describe and explain the step-by-step procedures to be used in the teaching and learning process, and c) can name, describe and explain an assessment strategy that is based on the teaching strategy which they use. Remember that the assessment must "look very much like the teaching strategy." (Quote from Dr. John Bowers, UNO/ESSP Consultant.)

#### — Quadrant 2, Left mode —

Outcomes: Trainee will complete all parts of the Lesson Plan only for Q2,LM, in accordance with instructions in step 6.2 on the flow chart. That is, Trainees will write the brief outcome statement in Q2, LM of the 4MAT Circle. Then, on 4 MAT Form "D" (Handout 10.1), concerning the Concept Trainees have selected to develop, Trainees will write the expanded outcome and detail the step-by-step procedures for conducting the teaching/learning activities to be used when teaching the substance and structure of the concept to learners. The pedagogical methods, strategies and techniques used are inherent in the processes and are described in the step-by-step procedures to be followed when presenting the lesson to learners. The instructional materials and student texts to be used are selected and/or created by Trainees as well as the means and methods of assessment to be used to evaluate the implementation and validity of the teaching/ learning activities set out in the Q2,LM segment of the 4MAT lesson plan.

Trainer Directed Activity:

1. Trainer will distribute Handout 10.1, Analytic Learner: 4MAT Form D. Trainee will write the Subject, Grade Level, Concept & Topics and duration of the lesson in the appropriate place on Form D (Handout 10). In the upper left hand corner of the form, Trainees will write their names. If the project is a group project, the name of each person in the group should be included.

2. Trainer will explain the difference between using 4MAT to plan a lesson and using 4MAT to implement or present a lesson. Every segment of the lesson relates to the content (i.e., the substance and structure of the concept, topics and subtopics) contained in the Q2,LM segment of the lesson. Therefore, everything in the 4MAT Cycle must promote the learning of that which is presented in an organized, structured form in Q 2,LM. Dealing first with this Quadrant when making the lesson plan helps teachers to clarify and focus their attention on exactly what it is they want learners to learn and, therefore, what they must teach about a specific concept and its subordinate topics and subtopics. At the implementation stage, when the teacher presents the lesson to learners, the teacher begins with Q1,RM, in order to connect the concept to the personal meaning given to it by learners and to bridge that

meaning to understanding its broader meaning when it is taught when the Q2,LM segment of the 4MAT plan is implemented with learners in the classroom. Making a plan and setting it out using the 4MAT formula, therefore, involves Trainees in a different sequence of activity, than when they or Teachers teach the lesson in the classroom. To summarize, planners begin developing the plan with Q2,LM. Teachers begin implementing the plan at Q1,RM.

3. Trainees will write the brief outcomes statement in the Quadrant 2, Left Mode Segment of the 4MAT circle (Handout 10). This statement will guide the planning and implementation of Q2,LM. (See 4 below to differentiate between the brief and the expanded outcomes statement.)

4. Trainee will write in appropriate space for Q2,LM (see Handout 10.1) an **expanded outcomes** statement to guide implementation activities and assessment strategies for the selected concept and its subordinate topics and subtopics.

(Trainer Note: Trainees will differentiate between a **brief outcomes statement** and an **expanded outcomes statement**. The brief outcomes statement is the statement contained in a segment of the 4MAT circle (Handout 10). The space available for writing the statement in the circle is severely restricted; therefore, the outcomes statement must be brief. On the 4MAT form D (Handout 10.1), however, there is room to expand the outcomes statement to give its full meaning. When the form is on the computer or the 4MATion Developer is used, the space can be expanded to accommodate any length of statement. If a standard form is used, and the number of lines provided do not accommodate the complete expanded outcomes statement, it can be continued on a separate sheet of paper. The statement should be concise and to the point; however, it should not be restricted unnecessarily by artificial space limitations.)

5. Trainees will identify, analyze, and write the Teachers Guide, i.e., the step-by-step procedures to be followed by teachers when teaching Q2, LM segment of the lesson unit according to the 4MAT lesson plan.

6. Trainees will identify, describe, and explain the assessment techniques and tools that are to be used and outline in the Teachers Guide the procedures to be followed by teachers to evaluate the achievement of intended learning outcomes achieved through the implementation of the Q2,LM segment of the 4MAT lesson plan.

Evaluation:

Through group discussion, Trainees and Specialist Facilitators agree on the validity of the step by step procedures for teaching the concept they have selected to develop as well as the assessment strategies proposed. Trainees will identify and state the characteristics that become the criteria by which they judge validity of the procedures for teaching and assessing outcomes.

#### — Quadrant 3, Left mode —

Outcomes: Trainees with the guidance of the Specialist Facilitators will analyze the activities create the instructional materials, student text, and assessment tools necessary to be used to teach and learn the selected concept

Trainer Directed Activities:

1. Trainees will name, describe and explain the type of instructional materials and student texts necessary to implement Q2,LM teaching and learning.

2. With the Specialist Facilitators, Trainees will identify resources which can be used as

163

models or drawn on to create the instructional materials and student texts necessary to implement Q2,LM teaching and learning.

[Trainer's note: Many resources will be in English; therefore, after the Trainees have named, described and explained the need for particular resource materials, the Trainer's responsibility is to help them find what they need and orally translate ideas as necessary while Trainees take notes in Dari and Pashto.]

Evaluation:

Create draft Q2,LM Teachers Guide product, including instructional materials & teaching aids for teachers and student texts and learning aids for learners. The substance of this product must be correlated with the Teachers Academic Resource Book materials. It must also be correlated with and set out 'proactive' pedagogical methods, strategies and techniques. Trainees and Specialist Facilitators will review and revise the product according to suggestions based on an agreed rationale.

### — Quadrant 3, Right mode —

Outcomes: Trainees will be able to analyze the materials they have created using external resources and advice of the Specialist Facilitators to implement Q2,LM, and from their own experience add something original to the instructional materials and student text.

Trainer Directed Activities:

1. Trainees will create appropriate original materials to illuminate and promote *mastery learning* of the concept, i.e., to help learners formulate the concept. Materials are to be added to those already created using external resources to make a complete package of instructional materials and student texts.

Evaluation:

Trainees will present their innovative, original materials to the group and will explain their relevance and appropriateness to be included in the Mastery Learning 'package' contained in the Teachers Guide to be used for teaching and learning the information included in the Q2,LM segment of the 4MAT lesson plan.

### — Quadrant 4, Left mode —

Outcome: Trainee will name, describe and explain assessment techniques and create a) assessment tools, b) an outline of assessment techniques, and c) a plan of step-by-step procedures to be used by teachers continuous assess the achievement of learning outcomes resulting from the implementation of the Q2,LM segment of the 4MAT lesson plan.

Trainer Directed Activities:

1. Remembering that '*assessment must look a lot like teaching*', (quote Dr. J. Bowers, UNO/ESSP Consultant), Trainees will create tools and/or outline assessment techniques relevant to assessing the achievement of learning outcomes planned as a result of implementing the Q2,LM segment of the 4MAT lesson plan.

[Trainer's note: Assessment tools and outlines of assessment procedures and techniques are developed as trainees create the 4MAT lesson plan and teachers guide. Simultaneously, Trainees create the materials necessary to implement the plan for each segment of the 4MAT cycle. This ensures that 'assessment and teaching will look alike' and, therefore, that the assessment will be valid. *EX POST FACTO EVALUATION* will be automatically eliminated from the system. It also insures that assessment will be continuous throughout the teaching and learning process.]

2. Trainees will analyze the assessment implementation plan and outline the step-by-step procedures to be used by teachers, students and/or external examiners to evaluate teaching based on the achievement of specified learning outcomes by students as a result of implementing the Q2, LM segment of the 4MAT lesson plan and teachers guide.

Evaluation:

Trainees and Specialist Facilitators will agree on validity of the assessment outline and procedural plan for evaluating the mastery of specified learning outcomes by all students regardless of their learning style or brain hemisphere preferences. Trainees will develop criteria and state a rationale in support of their contention that the outline and procedures are valid for Afghan teachers and learners.

#### — Quadrant 4, Right mode —

Outcomes: Trainees will share the completed Q2, LM segment of the 4 MAT lesson plan and teachers with the group, trying it out by 'role playing' and discussing the 'role play' with their peer arrange in 'think-pair-share' groups.

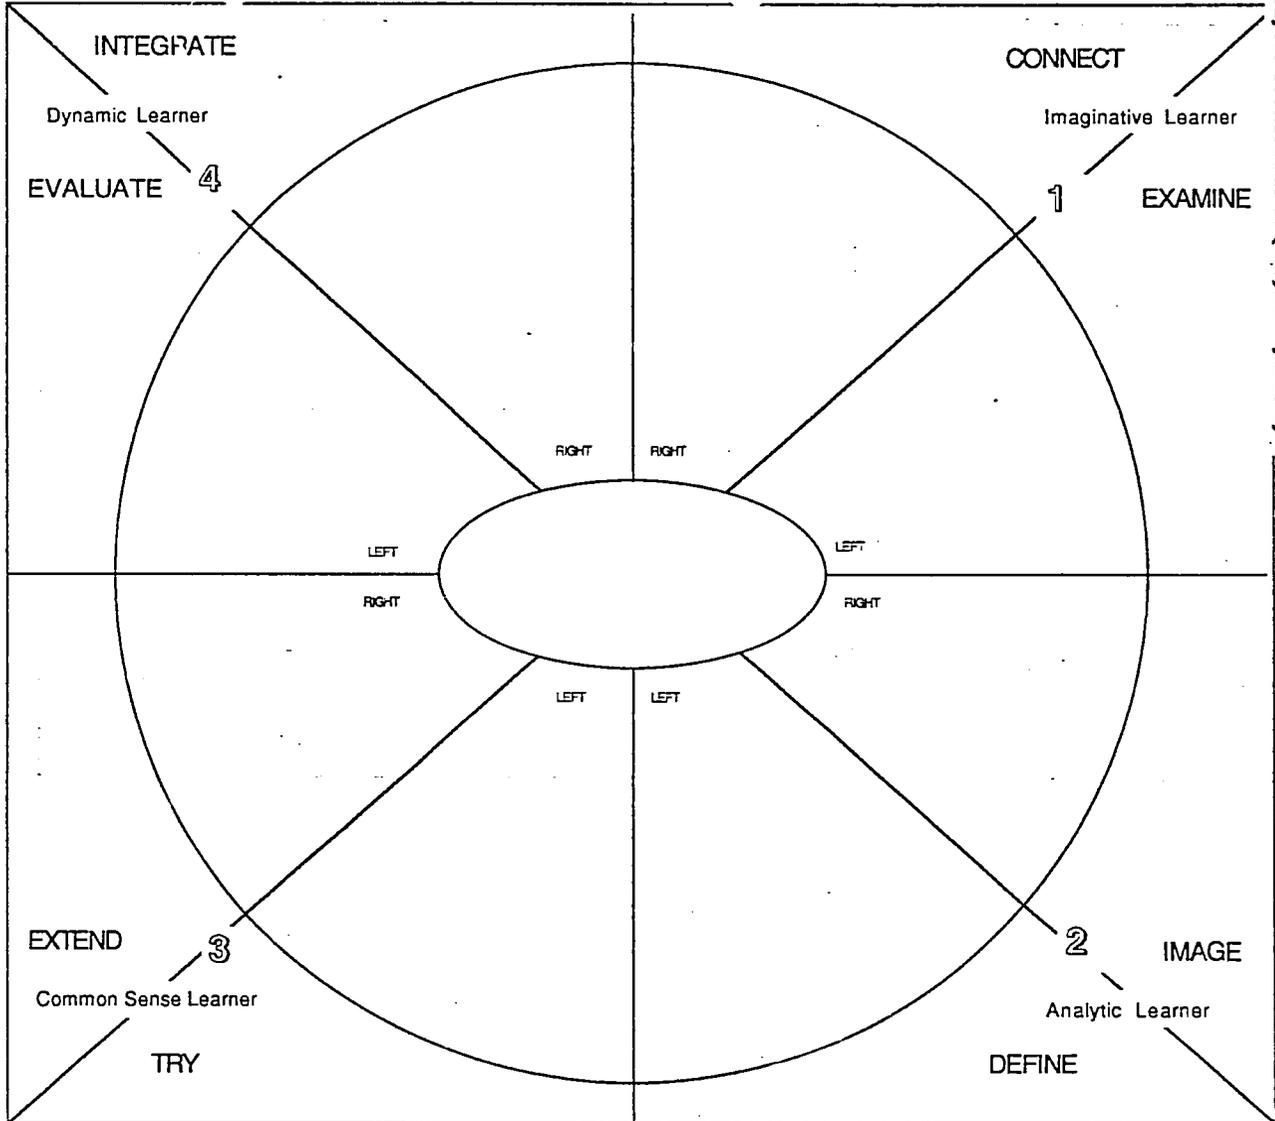

Trainer Directed Activities:

1. Trainer will group Trainees in twos or threes.

2. Trainees will try out the materials, role playing the use of the materials with their partners. Based on the felt success or lack thereof, trainees will make a final revision of Q2, LM Mastery (*lecture*) lesson plan & teachers guide, using the instructional materials and students texts they have created.

Evaluation:

Agreement by Specialist Facilitators that the Q2,LM plan, teachers guide, instructional materials, and student texts, when included with the remainder of the 4MAT plan and materials for the selected concept, is ready to be submitted to ECA for approval through Dr. Boardman and Prof. Azimi before being tried out in the schools.

## Advance Organizer -- Mastery Lecture

For each Topic and Subtopic related to Concept \_\_\_\_\_ identify all the information from recorded on Handouts 8.5 and 8.6 that you think is necessary for you to teach the concept. Review the information and look for relationships among the Id3as. Now you are ready to use this Advance Organizer to plan your lesson.

**Planning for The Mastery Lecture**

**Topic:**

List some questions you might ask to introduce your topic to review the personal connections learners have made with the concept (Q1, RM) and which learners analyzed (Q1,LM) and used as image to bridge (Q2,RM\*) to the broader meaning of the concept that you want to teach.

**SUBTOPIC**

- provide acknowledged body of knowledge
- emphasize significant aspects of concept in organized manner organically structured.

**SUBTOPIC**

- present information sequentially so learners see continuity
- draw attention to important, discrete details, but don't overcome learners with too many facts

**SUBTOPIC**

- Use a variety of delivery systems, e.g., mastery lecture, texts, guest speakers, films, visuals, demonstrations, etc.

What questions might you ask to help your learners practice this information? Try to vary types of questions so students can use different styles of thinking. See Handout 10.1.2. Questions should recall information, compare and contrast, and allow students to use their imaginations. Note at which point in your lecture you want to use these questions.

Think of an activity to use as a summary for this lecture.

Q1 RM  
Q1 LM  
Q2 RM

Introducing Information

Q2 LM  
Providing Information

Q3 LM  
Q3 RM

Practicing Information

Q4 LM  
Q4 RM

[Note: This Advance Organizer is adapted by D. Schutte from ASCD's Teaching Strategies Library, Part I and combined in part (text in *Providing Information* section) with information from 4Mallon Developer, a registered trade mark of Excel Inc. and B. McCarthy, Barrington, IL.]

## Questioning for Quality Thinking

### Knowledge Questions:

*Identification and recall of information--*

Who, What, When, Where, How \_\_\_\_\_?  
Describe \_\_\_\_\_

### Comprehension Questions:

*Organization and selection of facts & ideas--*

Retell \_\_\_\_\_ in your own words.  
What is the main idea of \_\_\_\_\_?

### Application Questions:

*Use of facts, rules, principles--*

How is \_\_\_\_\_ an example of \_\_\_\_\_?  
How is \_\_\_\_\_ related to \_\_\_\_\_?  
Why is \_\_\_\_\_ significant?

### Analytical Questions (Analysis):

*Separation of a whole into components --*

Classify \_\_\_\_\_ according to \_\_\_\_\_?  
Outline/Diagram/Web \_\_\_\_\_?  
How does \_\_\_\_\_ compare/contrast with \_\_\_\_\_?  
What evidence can you list for \_\_\_\_\_?

### Synthetic Questions (Synthesis):

*Combining old ideas to form a new 'whole'--*

What would you predict or infer from \_\_\_\_\_?  
What ideas can you add to \_\_\_\_\_?  
How would you create/design a new \_\_\_\_\_?  
What might happen if you combined \_\_\_\_\_  
\_\_\_\_\_ with \_\_\_\_\_?  
What solutions would you suggest for \_\_\_\_\_?

### Evaluation:

*Development of opinions, judgements, or  
making decisions*

Do you agree or disagree \_\_\_\_\_?  
What do you think about \_\_\_\_\_?  
List priorities you give to \_\_\_\_\_ among \_\_\_\_\_?  
How would you decide about \_\_\_\_\_?  
What criteria would you use to assess \_\_\_\_\_?

Chapter 5: Handout 10.1.2 b (Q2,LM -- paragraph 3)

## Strategies To Extend Student Thinking

Language and Learning Improvement Branch, Division of Instruction,  
Maryland State Department of Education

1. **Call on students randomly**
  - 1.1 Not just those with raised hands.
2. **Use 'Think-Pair-Share' Strategy**
  - 2.1 Two minutes of individual think time, two minutes of discussion with partner, then open up the class discussion
3. **Remember 'wait time'**
  - 3.1 Wait ten to twenty seconds following the asking of a 'higher level' question.
4. **Ask 'follow-ups'**
  - 4.1 Why? How did you decide that? Do you agree or disagree with \_\_\_\_\_? Can you elaborate with more detail or another generalization? Tell me more. Give examples.
5. **Withhold judgement**
  - 5.1 Respond to student answers in a non-evaluative manner.
6. **Ask for summary (to promote active listening)**
  - 6.1 "Could you please summarize Kareem's statement or answer."
7. **Survey the class**
  - 7.1 How many people agree with the author's point of view? How many agree with Shakur's answer? The answer to the Math problem I put on the blackboard is correct Agree?  
("Thumbs up or Thumbs down": "Agree or Disagree? Strategy)
8. **Allow for student to call upon student**
  - 8.1 "Shakur, will you call on Farhad to respond to my question?"
9. **Play an adversarial role**
  - 9.1 Require students to defend their reasoning against different points of view.
10. **Ask students to "unpack their thinking"**
  - 10.1 "Describe how you arrived at your answer." ("think aloud")
11. **Student questioning**
  - 11.1 Let the students develop their own questions.
12. **Cue student responses**
  - 12.1 There is not a single correct answer for this question. I want you to consider alternatives.

 Duration: 4 days

— Overview —

11. TESD Flow Chart 6.3 to 6.19

All Quadrants Right & Left Modes Except Q3, LM

Trainer Directed Activities:

I. Trainer will distribute Handout 11, Flow of TES Development Activity. Trainer will distribute Handout 12, 4MAT Forms A, B, C, E, F, G, H.

II. Given the previous Q2,LM activities (Chapter 5) concerning a specific selected concept in which a) an overview statement (Aims, Goals, and Outcomes) was written, b) Teachers Academic Resource Book

materials were selected and written, and c) the plan of and guide for teaching and learning as well as assessment activities were constructed and the instructional materials created and assessment tools developed and procedures outlined for Q2,LM, Trainees will construct a 4MAT Lesson Plan and Teachers Guide, according to the sequence prescribed on the Flow Chart and described in Handout 11. Trainees will also create, as necessary, teacher resource materials, student texts and learning materials. In addition, Trainees will develop assessment tools and procedural outlines for evaluating teaching in terms of learning outcomes achieved. The assessment design will look very much like the strategies and techniques used when teaching the concept. Trainees will study Schutte's TESD Flow Chart. They will follow the Flow Chart step by step to develop the concept they have selected to develop, modelling their performance in each segment of the 4MAT on the prior experience gained when developing Q2,LM, Flow Chart Step 6.2. (See Chapter 5) The activity sequence Trainees is as follows :

**Refer to Flow Chart Steps 6.3 to 6.9**

1. Trainees will write brief outcomes statement using the 4MAT Circle (Handout 10) on which the Overview Statement was placed during previous activities. (See Chapter 5)
2. Trainees will write expanded outcomes statements for all segments of the 4MAT cycle (See Flow Chart Steps 6.3 to 6.9 ) using Handout 12, prepared Forms 10A through 10H, with the exception of Form 10D which already has been completed for Q2,LM.

**Refer to Flow Chart Steps 6.10 to 6.16**

3. Trainees will complete the 'activities' sections for each segment of the 4MAT Cycle using Forms 10A through 10H with the exception of Form 10D which already has been completed for Q2,LM.
4. Trainees will create the Instructional Materials and Student Texts necessary to implement the activities planned for each segment of the 4MAT ['learning'] Cycle as they proceed to develop the plan and teachers guide.
5. Trainees will complete the 'assessment sections for each segment of the 4 MAT Cycle using Forms 10A through 10H with the exception of Form 10D which has been completed for Q2,LM.
6. Trainees will create the 'tools' and/ or outline the step-by-step procedures teachers will use to **continuously** assess learning outcomes as they implement each segment of the 4MAT lesson plan as it is set out and related to a specific concept and pedagogical and assessment procedures in the Lesson Guide.
7. Trainees will index all of the above on 4MAT form 'O' . The index should be prepared in three languages, English, Dari and Pushtu.

**Evaluation:**

Agreement by Specialist Facilitators that the whole 4MAT lesson plan, teachers guide, instructional materials and student texts, for the concepts the Trainees have selected to develop are valid for tryouts with Afghan Students; however, they must be submitted to ECA for approval through Dr. Boardman and Prof. Azimi before being tried out in schools.

Chapter 6: Handout 11  
(All Q's, paragraph I.)

I.  Concept/Overview

I.    Q2,LM

I.     
 I.     
 I.     
 Q1 R&LM  
 Q2 RM  
 Q3 L&RM  
 Q4 L&RM

See explanation below

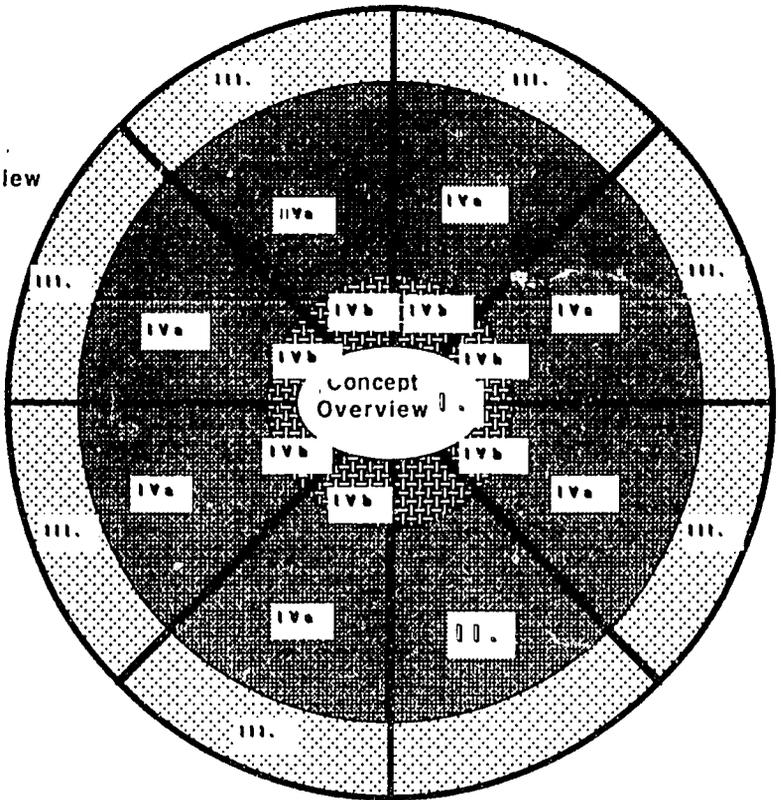

Flow of TES Development  
Activity

First - On 4mat Form 'O' Write Specific Concept Overview  
I. To Guide Lesson Planning & Other Development Activities

Second - For 4MAT Quadrant 2, Left Mode, Complete Q2,LM, Steps 1-9, below.  
II.

Third - For All Other 4MAT Quadrants, Right/Left Mode, To Provide An Image of  
The Whole Teaching/Learning Idea Associated With The Selected Concept,  
III. Complete Brief & Expanded Outcomes Statements, Steps 1-2, below

Fourth - For Each Other 4 MAT Quadrant, Right or Left Mod  
IVa IVb Proper Sequence, Complete 3 - 9, below.

1. Write Brief Outcomes In Q2,LM Space On 4mat Cycle (Wheel).
2. Write Expanded Outcomes On 4mat Form D, Q2,LM.
3. Organize & Write Content To Define And Teach Structural Propositional And Procedural Content Of Concept.
4. Write Modern, Research-Based Step-by-Step Pedagogical Procedures To Cover All Planned Teacher & Learner Activities Designed To Elicit From And Transfer Information And Skills To Learners.
5. Create Instructional Materials And Teaching Aids Necessary A) To Support Teacher's Presentation Of Q2, LM Lesson Activity And B) To Write The Teacher's Academic Resource Book That Will Be Used To Upgrade Teachers' Background Knowledge And Skills Of The Specific Concepts With The Subordinate Topics And Subtopics They Are Expected To Teach.
6. Create And/Or Select Student Text And Learning Aids Necessary To Implement Q2, LM Lesson Activities.
7. Create An Outline To Guide The Assessment Of Teaching/Learning Activities To Ascertain That The Intended Learning Outcomes Have Been Achieved. Such Assessment Is To Provide Basis For Supervision And Action Research Where Intended Learning Outcomes Have Yet To Be Achieved.
8. Create The Evaluation Tools And Assessment Techniques With Step-by-step Procedures To Be Followed By Teachers, Learners, Or External Evaluators.
9. Index The Above Activities For This Concept On 4mat Form O.

RM

Use the 4 MAT Cycle  
 Write Overview : --  
 [Theme Statement Contains  
 Aim, Goal, & Outcome]

6.1

Select Appropriate Level  
 Propositional & Procedural  
 Information and Skills  
 as the Concept Content  
 at the Heart of Planning  
 the Lesson Guide

*Handwritten signature*

Quadrant Two : Left Mode  
ANALYTIC LEARNER

Write brief Objective in the 4 MAT Cycle to formulate the concept for formal development of knowledge of the concept.

Write expanded Objective in 4 MAT Teacher's Lesson Guide as an organizing principle around which to present propositional, procedural, and conditional information to students

Name, Describe, Explain Activity and Relate to Specific Method, Strategy and Technique.

Identify and Create Teacher Materials and Instructional Aids and Student Texts and Learning Aids.

Name, Describe, Explain Assessment Techniques

Activity:—

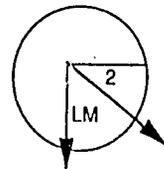

- Provide "acknowledged body of knowledge" related to the concept
- Emphasize most significant aspects of concept in organized, organic manner
- Present information sequentially so students see continuity
- Draw attention to important, discrete details; don't swamp students with myriad facts
- Use a variety of delivery systems: *ILC*  
-interactive lecture, text, guest speakers, films, visuals, CAI, demonstrations, etc. when available

Evaluation:

Teacher verbal and/or written check on understanding of information

Quadrant Two : Left Mode  
Analytic Learner  
Goal: Concept Formulation

Analytic Learner's Most Comfortable Place  
Concern for the facts as experts see them.  
Teach the concept to them.  
Answer the question "What?"  
Teacher's Role: Information giver.  
Teacher more active.  
Method: Informational

6.3

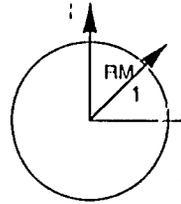

### Quadrant One: Right Mode IMAGINATIVE LEARNER

Use Conditional Information from  
Teacher's Academic Resource Book

Write brief Objective in the 4 MAT cycle to connect Students personally with the concept through teacher created experiences

Write expanded Objective in 4 MAT  
Teacher's Lesson Plan

Objective must create an experience that allows Students to enter into the concept, engaging a Student's Self, and connect personal meaning with experiencing of the concept.

#### \*\* Right Mode Strategies

1. Metaphor; 2. Visualization ; 3. Imagery;
4. Paradox; 5. All Forms of Poetry;
6. All Activities which Respect Intuition;
7. All Fine Arts:
  - Drawing, Painting, Music, Creative Drama and Writing, Physical Movement ;
8. Modalities: Audio, Visual, Kinesthetic, Mixed;
9. Most forms of Performance: Building, Role Playing, Simulations, Demonstrations, Experiments;
10. All Kinds of Connections: Patterning & Configurations; All synthesis, e.g. Synectics [Metaphor & Analogies], Mind-Mapping, i.e., grouping one's own thoughts & ideas, Clustering, i.e., grouping other's thoughts & ideas, Analogies;
11. Mathematical Conceptualizations: Geometry, Spatial Relations

**Quadrant One  
Right and Left Mode  
Imaginative Learner  
Goal  
Integrating Experience with Self**

**Learner Preference for Concrete  
Experience & Reflective Observation**

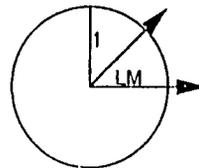

The Imaginative Learners Most Comfortable Place  
Concern for Student to Connect Personal Meaning with Concept.  
Create a Reason for Learning the Concept. Answer, "Why?"  
Teacher's Role: Motivator  
Teacher More Active than Student  
Method: Simulation to encourage Brainstorming for Imagination, Innovation, and empathy  
(See Right Mode Strategies \*\*)

### Quadrant One : Left Mode IMAGINATIVE LEARNER

Write brief Objective in the 4.MAT Cycle to examine the "whole" right mode experience created in 6.3 to answer question, "Why should I learn this Concept?"

Write expanded Objective in 4 MAT  
Teacher's Lesson Guide

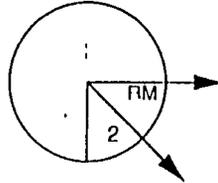

which must empower students to examine the "whole" personal experience of the concept, stepping outside it to analyze its parts in terms of its broader meaning in the world beyond the self. Analysis should answer question, "Why?"

6.4

*ANS*

185

**Quadrant Two : Right Mode  
Analytic Learner**

Write brief Objective in 4 MAT Cycle to elicit from students a strong image of the Concept.

Write expanded Objective in 4 MAT  
Teachers Lesson Guide  
to help students integrate personal experience of the concept into conceptual understanding by stepping outside the personal experience of the concept to understand its broader relation to the world outside themselves.

Quadrant Two  
Right Mode  
Analytic Learner  
Goal

Integrating Reflections  
into Concepts

Learner Preference for  
Reflective Observation and  
Abstract Conceptualization

The Analytic Learner's most  
Comfortable Place

Concern for the facts as  
experts see them.

Teach it to them.

Answer the question "WHAT?"

Teacher's Role: Give Information

Teacher more active.

Method: Informational

(See Right Mode Strategies\*\*)

6.6

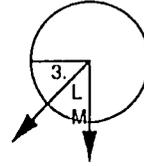

**Quadrant Three : Left Mode  
Common Sense Learner**

Goal

Working on Defined Concepts

Write brief Objective in the 4 MAT Cycle to allow students to work on defined concepts.

Write expanded Objective in 4 MAT Teacher's Lesson Guide which provides students with framework to reinforce defined concepts by manipulating and practicing use of the defined concept.

**Quadrant Three  
Left and Right Mode**

Working on Defined Concepts

Goal

Practice and Personalization

Learner Preference for Active Experimentation and Abstract Conceptualization

The Common Sense Learner's Most Comfortable Place

Concern is for hands-on experience. Let them try it.

Answer the question.

"How does this work?"

Teacher's Role: Coach or Facilitator

Students more active

Method: Facilitation

(See Right Mode Strategies \*\*)

6.7

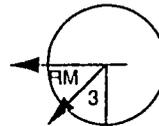

**Quadrant Three : Right Mode  
Common Sense Learner**

Goal

Practice and Personalization

Write brief Objective in the 4 MAT Cycle to allow student the chance to try using the concept on their own but with teacher supervision.

Write expanded Objective in 4 MAT Teacher's Lesson Guide to provide opportunity for students to use and experiment to try out the concept and add something of themselves

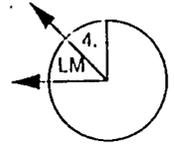

*Adams*

3.8

**Quadrant Four : Left Mode  
Dynamic Learner**

Write brief Objective in the 4 MAT Cycle to help students integrate the concept into their own lives by finding useful and original applications for it.

Write expanded Objective in 4 MAT Teacher's Lesson Guide to help students to analyze their own applications of the concept and evaluate them according to the criteria of usefulness and originality and as a stepping stone to further learning.

**Quadrant Four  
Right and Left Mode  
Dynamic Learner  
Goal**

**Integrating Application and Experience**

**Learner Preference for Concrete Experience  
and Active Experimentation**

The Dynamic Learner's most Comfortable Place  
Concern for action or doing.  
Let them teach it to themselves and share what they learn with others.

Answer the questions "If?" and "What can this become?"

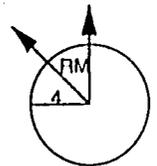

Teacher's Role: Evaluator or Remediator  
Students more active than Teacher  
Method: Self Discovery  
[See Right Mode Strategies\*\*]

**Quadrant Four : Right Mode  
Dynamic Learner**

Write brief Objective in the 4 MAT Cycle to allow student to use the concept and share it with others.

Write the expanded Objective in 4 MAT Teacher's Lesson Guide to encourage students to evaluate the use of the concept in their own lives, use it, and share it with others.

6.10

**Quadrant One : Right Mode  
Imaginative Learner**

Name, Describe, Explain Activity and Relate to Specific Method, Strategy, and Techniques

Identify and Create Teacher Materials and Instructional Aids and Student Texts and Learning Aids

Name, Describe and Explain Assessment and Evaluation Techniques

**Activity:**

- Create experience that connects students directly to the concept in a personal way.
- Capture students' attention by initiating a group problem-solving activity before delivery of instruction.
- Begin experience with a situation that is familiar to students and builds on what they already know.
- Construct a learning experience that allows diverse and personal student responses.
- Facilitate the work of cooperative teams of students.
- Elicit non-trivial dialogue from students

**Evaluation:**

Student engagement, imagination and idea generation.

**Quadrant One  
Right & Left Mode  
Imaginative Learner**

Integrating Experience with Self  
The Imaginative Learners Most Comfortable Place

Concern for Student to Connect Personal Meaning with Concept. Create a Reason for Learning the Concept. Answer, "Why?"

Teacher's Role: Motivator

Teacher More Active than Student

Method: Simulation to encourage Brainstorming for imagination, innovation, and empathy

**Activity:**

- Guide students to reflection and analysis of the created experience
- Encourage students to share their perceptions and beliefs
- Summarize and review similarities and differences
- Establish a positive attitude toward the diversity of different people's experience
- Clarify the reason for the learning the concept

**Evaluation:**

The quality of students' analysis of their collective subjective world of experience. Students ability to explore stated feelings by listening, listing, patterning, prioritizing, and stating their own reflections

6.11

**Quadrant One : Left Mode  
Imaginative Learner**

Name, Describe, Explain Activity and Relate to Specific Method, Strategy, and Techniques

Identify and Create Teacher Materials and Instructional Aids and Student Texts and Learning Aids

Name, Describe and Explain Assessment and Evaluation Techniques

and Relate to Specific Method,  
Strategy, and Techniques

Identify and Create Teacher  
Materials and Instructional Aids  
and Student Texts and Learning  
Aids

Name, Describe and Explain  
Assessment and Evaluation  
Techniques

Goal  
Working on Defined Concepts

Left and Right Mode  
Quadrant Three

Practice and Personalization

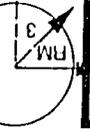

The Common Sense Learner's Most  
Comfortable Place

Concerns for hands-on experience,  
Let them try it,  
Answer the question,  
"How does this work?"  
Teacher's Role: Coach or Facilitator  
Students more active  
Method: Facilitation

Evaluation:  
Students "on-task" behavior and  
engagement in their chosen options

Activity:

- Encourage tinkering with ideas, relationships and connections
- Set up situations where students have to find information not easily available in school texts
- Provide opportunity for students to design their own open-ended explorations of concept
- Provide multiple options so students can plan a unique "proof" of learning
- Require students to organize and synthesize learning in a personal, meaningful way
- Require students to begin the process of planning how their project will be evaluated, identifying their own criteria for excellence

6.13

Common Sense Learner  
Quadrant Three : Left Mode

Goal  
Working on Defined Concepts

Name, Describe, Explain Activity  
and Relate to Specific Method,  
Strategy, and Techniques

Identify and Create Teacher  
Materials and Instructional Aids  
and Student Texts and Learning  
Aids

Name, Describe and Explain  
Assessment and Evaluation  
Techniques

Goal  
Practice and Personalization

Left and Right Mode  
Quadrant Three

Practice and Personalization

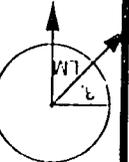

The Common Sense Learner's Most  
Comfortable Place

Concerns for hands-on experience,  
Let them try it,  
Answer the question,  
"How does this work?"  
Teacher's Role: Coach or Facilitator  
Students more active  
Method: Facilitation

Evaluation:  
Quality of student work,  
perhaps an objective quiz

Activity:

- Provide hands-on activities for practice and mastery
- Check for understanding of concepts and skills by using relevant standard materials, i.e. worksheets, text problems, workbooks, teacher prepared exercises, etc.
- Provide opportunities for students to practice new learning, perhaps in multi-modal ways (learning centers, games fostering skills development, etc.)
- Set high expectations for skills mastery
- Use concept of mastery learning to determine if re-teaching is necessary and how it will be carried out
- Students may create additional multi-modal practice for each other

191

6.15

### Quadrant Four : Left Mode Dynamic Learner

Goal

Analyze Own Applications of Concept for Usefulness, Originality, and Basis for Future Learning

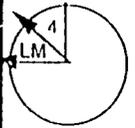

Name, Describe, Explain Activity and Relate to Specific Method, Strategy, and Techniques

Identify and Create Teacher Materials and Instructional Aids and Student Texts and Learning Aids

Name, Describe and Explain Assessment and Evaluation Techniques

#### Activity:

- Give guidance and feedback to students plans, encouraging, refining, and helping them to be responsible for their own learning
- Help students analyze their use of the learning for meaning, relevance, and originality
- Maintain high expectations for completion of chosen options
- Help mistakes to become learning opportunities
- Summarize by reviewing the whole, bringing students "full circle" to the experience with which the learning began

#### Evaluation:

Students' willingness and ability to edit, refine, rework, analyze, and complete their own work

### Quadrant Four

#### Right and Left Mode Dynamic Learner

Goal: Integrating Application & Experience

The Dynamic Learners most Comfortable Place

Concern for action or doing something

Let them teach it to themselves & share what they learn with others.

Answer the questions, "If?" or

"What can this concept become?"

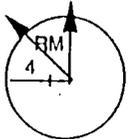

Teacher's Role: Evaluator or Remediator.

Students more active than teacher.

Method: Self-Discovery

#### Activity:

- Support students in learning, teaching, and sharing with others
- Establish a classroom atmosphere that celebrates the sharing of learning
- Have opportunity for students to practice new learnings
- Make student learning available to the larger community, i.e., books students write are shared with other classes; students report in school paper; student work is displayed throughout the school; etc.
- Leave students wondering (creatively) about further possible applications of the concept extending the "what ifs" into the future.

#### Evaluation:

Students ability to report and demonstrate what they have learned. Expressions of student enjoyment in the sharing of their learning. Quality of student final products.

6.16

### Quadrant Four : Right Mode Dynamic Learner

Goal

Make Use of the Concept By Themselves and Share What They Do with Others

Name, Describe, Explain Activity and Relate to Specific Method, Strategy, and Techniques

Identify and Create Teacher Materials and Instructional Aids and Student Texts and Learning Aids

Name, Describe and Explain Assessment and Evaluation Techniques

1995

7.

Develop Systematic Methods, Strategies, and Techniques for Supervision and Evaluation and Assessment of System As a Function of Learning Outcomes for Students and those Outcomes in Terms of Expected Social Consequence

8.

Develop Systematic Methods, Strategies, and Techniques for Managing and Administering Inputs and Activities to Produce Specific Learning Outcomes with Children at All Grade Levels

8a

Develop Systematic Methods, Strategies, and Techniques for Developing Community Councils of Parents and Leaders to act as Guardians of the education of the Community's Children

~~1915~~

## Pedagogical Applications : Format

Dear Colleagues: Following is a format to be used in analyzing any pedagogical method, strategy, or technique whether encountered in practice in the classroom, or described in Videotapes, Manuals, or Books. Educators will use this format as an *advance organizer* to help them study and understand the pedagogy they and other people use so as to be able to repeat peak performances themselves. A good place to start the study is the ASCD Videotape/Manual Library established by UNO/ESSP. .... Dr. Donald G.W Schulte

## Pedagogical Applications - Brainstorming

Dr. Donald G.W. Schulte

### What is Brainstorming?

Brainstorming is a valuable tactic or strategy used to discover solutions to problems, to create an idea, to create a process, to plan and to achieve a specific outcome, or simply to stimulate an unrestricted discussion to explore an issue.

### When to Use Brainstorming:

Brainstorming is used to connect learners' prior personal experiences with an idea, person, place or thing with a new idea, person, place or thing that the teacher wishes to introduce. (4MAT QI, RM) It can be used to stimulate discussion in all 4MAT Quadrants.

Brainstorming is normally used with groups, but it can also be used by individuals. In that case it is called *internal brainstorming*, but the rules governing group brainstorming still must be faithfully obeyed. The rules are mentioned below.

### How to Use Brainstorming: [Planning]

1. Form a group of students to solve a problem, to create an idea, to plan a process to achieve a specific outcome, or to stimulate an unrestricted discussion in order to explore an issue.
2. Announce to the group the purpose of the 'brainstorming session'.
3. Each person in the group is asked to voice any idea or solution that comes to mind, no matter how fragmented or impractical it might seem.
4. All students are asked to follow the **four basic and unalterable rules** of brainstorming. No deviation is allowed. The rules to follow are:
  - 4.1 **Defer judgment on any idea that is expressed by any group member.** This even includes giving encouraging comments to others or attaching qualifying phrases to your own suggestions. For example, avoid such statements as, 'That's a good idea!' or 'My thought is probably irrelevant, but here it is!.'
  - 4.2 **The session must be as unrestrained or uninhibited as possible, with each person voicing whatever idea comes to mind without reservation or self-imposed or group restraint.**

- 4.3. Participants are encouraged to hitchhike (catch a free ride) on the ideas of others. When one person's suggestion sparks an idea by another, it should be *instantly* expressed, but without interrupting the person making the suggestion before he/she is finished.
- 4.4. Quantity of idea, not quality of idea, is the brainstorming goal. Analysis, evaluation and elimination can be accomplished later. During the right-brained part of brainstorming, however, negatives are inappropriate and out of order.

#### How to Evaluate Brainstorming: [Assessment]

The first set of criteria for evaluating the use of 'brainstorming' as a tactic or strategy for problem solving or creating ideas is established by observing individual behavior in the group to ensure the four inviolable rules have **NOT** been broken .

The second set of criteria relates to purpose. Did the brainstorming session achieve the goal as outcome.? Did the brainstorming session elicit sufficient information which could later be analyzed to provide several alternative solutions to a problem from which the group could choose the best or most desirable one according to either the group or individual standards? Was an idea created? Did a planning process to achieve a specific intended outcome emerge? Did a discussion ensue which allowed the group to explore all sides of an issue?

#### Things to Remember:

Brainstorming can be used as a tactic in relation to a strategy or a strategy in relation to a method!

Modified and Adapted by Dr. Donald G.W.Schutte from Jacquelyn Wonder & Priscilla Donovan. *Whole-Brain Thinking: Working From Both Sides Of The Brain To Achieve Peak Job Performance*. Balantine/Random House, 1984. This approach has been used for many years and is found in many references.

## Pedagogical Applications: Compare & Contrast

Extracted, Adapted, & Related to TESD and 4MAT\*\* by Dr. Donald G.W. Schutte from ASCD's *Teaching Strategies Library: Part II: Compare & Contrast* by.

### What is a Compare & Contrast Strategy

**Definition: American Heritage Dictionary:**

**Compare:** verb

1. To represent [something] as similar, equal, or analogous; to liken [one thing to another];
2. To examine in order to note the similarities or differences of [two or more things]

**Contrast:** verb

1. To set in opposition in order to show differences [of two or more things];
2. To show differences when compared [between/among two or more things]

**Compare and Contrast used as a teaching/learning strategy,** develops learners' abilities to collect, organize and remember information. It also helps learners to apply information developing new learning during the application.

The strategy has three phases --

- 1) the Description Phase,
- 2) the Comparison Phase, and
- 3) the Application Phase.

### When to Use Compare & Contrast Strategy:

Use Compare & Contrast Strategy as an important tool when you want learners: --

Q1,LM -- to take a more active role in learning.

Q2,LM -- to see relationships between general ideas and specifics.

All Q's -- to keep meaningful notes.

Q2,LM -- to observe and describe accurately.

Q1,LM -- to focus attention on criteria to use to decide what is important to learn & remember.

Q3,LM -- to review important ideas.

Q2,LM -- to establish effective sets for new learning.

Q4,LM -- to get new information from reading, listening, and observation.

All LM -- to compare and contrast two ideas and concepts that might otherwise be confused.

Q4,LM -- to compare two concepts, find new applications & form generalizations.

Q3,LM -- to become independent learners.

Q3LM -- to review material previously taught.

## How to Use Compare & Contrast Strategy :

### Planning:

1. Select two ideas you would like your learners to compare.
2. Identify or create resources learners can use to learn about the ideas or concepts to be compared.
3. Establish a set of criteria that can help learners focus on what they have learned.
4. Provide learners with a visual, 'advance' organizer. (See Form attached)
5. Create an application activity that will help learners reflect on what they have learned.

### Implementation:

#### Description Phase:

1. Teacher provides learners with a visual or *Advance Organizer*. (See *Advance Organizer* Form, attached.)
2. Teacher provides learners with sources of information about two related ideas or concepts.
3. Teacher provides learners with a set of criteria on which to focus their observations.
4. Learners use these criteria and the sources of information to develop independent descriptions of both ideas or concepts.

#### Comparison Phase:

1. Teacher and learners work together to identify similarities and difference between the two ideas or concepts.
2. Use *Advance Organizer* to record learners descriptions on the chalkboard or the overhead and use learner's descriptions to help them identify similarities and differences between the two ideas or concepts being compared.

#### Application Phase:

1. Teacher asks questions that encourage learners to reflect on and explore the implications of what they have learned.
2. Teacher asks learners to apply what they have learned to new contexts.

### How to Evaluate It: [Assessment]

1. Are learners able to distinguish between the ideas they have studied? What is the quality of the distinctions made? Are they surface distinctions or do they reflect in-depth analysis and understanding of important facts, details and generalizations about the two ideas or concepts compared.
2. Are learners able to independently make generalizations about the ideas or concepts which have been compared?
3. Are learners able to support their observations with a rationale acceptable to the teacher and their peers?
4. Are learners able to find new applications for the concepts or ideas that have been compared?

### Things to Remember about it:

Be sure and check the visual, *Advance Organizer* to establish that notes have been correctly recorded for later review and recitation or to support assessment.

## Pedagogical Applications: K - W - L Strategy

Extracted, Adapted & Related to TESD and 4MAT\*\* by Dr. Donald GW Schutte from ASCD's Videotape & Facilitator's Manual, Teaching Reading As Thinking, pp 11 -17.

### Background:

The K-W-L Strategy was developed by Ms. Donna Sederburg Ogle. Her work was based on her own classroom study. It showed K-W-L to be an effective tool. It helps students become more active thinkers and helps them remember better what they read. It has also been useful in helping teachers better communicate the active nature of reading in group settings. Ms. Ogle also based her work on the research of R. Andersen. His research confirmed the importance of prior knowledge or schemata in determining how readers interpret what they read. Ms Ogle also cited the work of C. Andersen and Smith. They demonstrated by their research with science concepts that teachers and texts must directly address the schemata or prior "folk" assumptions about those concepts that are being taught if students are to change their understanding.

Ms.Ogle is scheduled to act as a short-term consultant to the UNO/ESS Project at sometime in the future. She will find the K-W-L Strategy has been used in the Total Education Systems Development (TESD) process as an effective thinking tool in oral discussion as well as in reading. It is a particularly effective strategy when used in Quadrant 1 of 4MAT to help learners to connect their concrete experience of a concept with the organized abstract formulation the teacher wants to teach.

K-W-L is particularly effective as a tactic in relation to other strategies as well. For example, it can be used as a tactic within the *Synectics Strategy*. There is a point in the *Synectics Strategy* at which, for the purpose of comparison, Teachers and Learners identify the important characteristics of the two objects or ideas (concepts) within a metaphor where the focus is on making comparisons. These characteristics are used by Teachers and Learners as criteria to judge, define and classify the important points, i.e., the similarities and differences between the two objects or ideas (concepts) within a metaphor. This is a prerequisite to analogical thinking. It is important for both Teacher and Learner to know *what they know (K)* about the two ideas being considered within a metaphor in order to connect learners with the concept. It is helpful to know *what they want to know (W)*. This stimulates interest. At points of assessment in the lesson, learners' statements concerning *what they have learned (L)* permits Teachers, their peers, and parent to understand the difference between what was actually learned and what the Teacher intended to teach.

### What is the K - W - L (Small or Large Group Instruction) Strategy :

K-W-L is a strategy that models the active thinking needed when reading expository text. The letters *K*, *W*, and *L* stand for three activities students engage in when reading (or communicating) with a purpose, i.e., to learn. The three activities are: 1) recalling what they **KNOW**, 2) determining what they **WANT** to learn, and 3) identifying what they **LEARN** as they read. A worksheet given to every student includes columns for each of these activities.' (See Attachment.)

As noted under Background, above, in TESD we use K-W-L as a Speaking, Listening, & Writing strategy as well as a Reading Strategy. The worksheet provided works well in any case.

K-W-L is a five step process. **Step 1: Preparation, Step 2: Group Instruction, Step 3: Individual Reflection, Step 4: Reading, Step 5: Assessment of Learning.**

The essential elements of the strategy are that learners:-

- first activate their own knowledge of the topic as fully as is useful for learning,
- formulate their own questions to motivate and focus their reading,
- read actively and attend to information that is new to them as they read, or listen, and
- summarize and evaluate their accomplishments when finished.

**When to Use the K-W-L Strategy for Small or Large Group Instruction :**

Use the K-W-L strategy when you want:--

- to help learners develop a more active approach to reading, listening or discussing expository material by connecting their personal experiences relative to the concept under consideration. (Q1,R &LM)
- to help learners acquire the ability to decide what they want to know about materials they read or discuss. (Q2,R&LM)
- to help learners develop a questioning attitude towards materials they read or hear or as a means of anticipating questions and answers when they speak or write. (Q3,L&RM) and (Q4,L&RM)

**How to Use K-W-L Strategy:**

[Note: These steps are presented as reading strategies but they may be adapted to become speaking, writing, and listening strategies and applied when teaching all subjects.]

**Step 1: Preparation: --**

- Teachers prepare by reading (or reviewing) the materials (concept, topics, and subtopics) to be learned by students in class. (In TESD, this means reading and reviewing the Propositional, Procedural and Conditional Information and skills, i.e., Teachers Academic Resource Book materials concerning the concept under consideration.)
- Teachers determine the key content concept that will elicit the significant knowledge and skills that learners should learn about the concept. (In TESD this is the overview concept that governs the entire lesson unit or the Topics or Subtopics that govern the sub units within the whole unit.)
- Teachers produce learners' worksheets. (See Attachment for example.) (In TESD, the information from the completed worksheet may be used to develop an *advance organizer* to be used in Quadrant 2, LM.)

## Step 2: Group Instruction [3 Parts]:--

### -- Part 2.1:

- 2.1.1: Teachers engage learners in a discussion of what they as a group already know about the concept they want to teach
- 2.1.2 Teachers list on the chalk board all that the learners think they know about the concept.
- 2.1.3 Teachers note disagreements and questions as they emerge from the discussion and suggest that learners include them on the center column of the worksheet as questions they want to have answered from what they read or hear.

### -- Part 2.2:

- 2.2.1 After learners have given all the information they can think of about the concept, Teachers ask them to categorize the information they have generated. (Teachers may have to identify one general category that incorporates two or more pieces of information on the board to model the building of chunks or categories of information.) [In TESD, these categories form the basis of criteria that allow learners to judge, define and differentiate objects, ideas (or concepts) as one thing rather than another. As criteria they focus learners' attention on the important points. These criteria allow both teacher and students to organize the information to be rehearsed in the short-term memory in preparation for transfer to and easy access and recall from the long-term memory bank.]

### -- Part 2.3:

- 2.3.1 When learners are familiar with the categorization process, teachers ask them to anticipate or predict the categories of information they expect an author will include in an article or discussion on this or a similar topic.

Ms Ogle's example (modified to fit Afghan situation): If social studies classes are reading or discussing about Abdur Rahman's reign, learners should be able to anticipate or predict the categories of information which will be found in the reading materials or lecture/discussion. Learners then will raise questions. When they read text or listen to the lecture, they will answer such questions as follows: (i) the King's accession to power, (ii) major issues during the time of his reign, (iii) how the King and his Court resolved or failed to resolve those issues, (iv) who the King's opponents were and the circumstances of their opposition (v) the circumstances surrounding the end of his reign, (vi) some evaluation of his accomplishments, (vii) the social consequences of his reign .

These same categories can be generalized and used for topic to topic to discuss other Kings, Presidents or Leaders at all levels of government. Standardizing the categories allows learners to compare and contrast different leaders who have governed them or their ancestors over time, or to think about qualities they should look for in future leaders. These categories become embedded in learners' minds. They become tools which allow them to think independently about the past, present and future..

### **Step 3: Individual Reflection:--**

- After the group introduction to the concept or topic, learners are asked to individually write on their own worksheet what they feel confident they know about the concept.
- Learners are also asked to write down the categories of information which they anticipate will be included in the reading materials, lecture or discussion.
- Teachers will help learners raise questions that have emerged from the discussion or that come from thinking of the major categories of information they expect to find. Learners will be expected to think of at least three questions or issues that they WANT to learn about as they read. These questions should be written on their individual worksheets.

[Note: Of course, all this written work will have to be modified if the strategy is used in the early grades before learners have writing capabilities.]

### **Step 4: Reading (Lecture or Discussion):-**

- Teachers direct learners to read the text or listen (and take notes) to the lecture or discussion, focusing on what they already know about and what they want to find out about the concept under consideration.
- Learners will note the information they learn on the worksheet as well as new questions and answers as they emerge from reading, writing, speaking, or listening.

### **Step 5: How to Evaluate K-W-L: Assessment of Learning:-**

- Teachers engage students in a discussion of what they have learned from reading texts or listening to the lecture or discussions.
- Teachers review questions and issues raised by themselves or their students to determine how well students answered the questions or resolved the issues. During the review process teachers help students to correct misinformation or misunderstandings. Teachers encourage students to help as much as possible to correct their peers.
- Teacher and students together construct a summary of the lesson, rehearsed and organized for storage in and retrieval from the long-term memory.

**Things to Remember about** In the early grades before children can write or when their writing skills are just developing, Teachers can use chalk board mind-mapping and modify each step by discussion and writing things in appropriate language levels on the board.

Working in pairs is a very effective way of helping students develop the ability to ask questions and build categories. Think-Pair-Share is a good way to elicit discussion.

**DONNA OGLE'S K-W-L STRATEGY SHEET (For Use By Learners)**

WHAT (I / WE) KNOW	WHAT (I / WE) WANT TO FIND OUT	WHAT (I / WE) LEARNED OR STILL NEED TO KNOW

**2. CATEGORIES OF INFORMATION (I / WE) EXPECT TO USE**

--

## Pedagogical Applications--- Mind-mapping (or Clustering)

Modified, Adapted, Supplemented and Related to TESD and 4MAT by Dr. Donald G.W. Schutte from Tony Buzan, *Use Your Perfect Memory*, E. P. Dutton, N. Y., 1984, or Linda Verlee Williams, *Teaching for the Two-Sided Mind. A Guide to Right Brain/Left Brain Education*, Prentice Hall, Englewood Cliff, NJ, 1983

### • • Definition from American Heritage Dictionary:

Cluster --- [noun] 1. a group of things growing or gathered closely together; a bunch.

To Cluster [Verb] 2. to gather, grow, or form into clusters.

### Exercise:

Visualize a bunch of grapes (*angur*). Individual grapes grow on branches which gather or cluster around a central stem. **Clustering** is used here as a metaphor. Ideas, like grapes, tend to cluster about a central theme or concept as that theme or concept grows through analysis and is elaborated in terms of related ideas that, within the framework of the specific central theme, are increasingly subordinate to each other.

### What is Mind-mapping (or Clustering) • •

**Mind-mapping (or Clustering)** is a strategy or tactic used in the Total Education Systems Development Process (TESD) in one or the other of two ways.

- 1) Mind-mapping is used as a system to take notes about what others say, orally or in writing. It is a system by which learners map the thoughts of others as they listen to them, read what they have written, or make inferences about their observed actions. In the process of listening, reading or observing, learners identify, attend to, and note in written and/or multi-dimensional forms the formal and informal patterns that emerge as associated ideas cluster around a central theme or concept. These notes provide a means to organize and rehearse information briefly in the the short-term memory for subsequent transfer to the long-term memory for easy access, retrieval, elaboration, and use.
- 2) It is used as a system to bring to consciousness and record one's own ideas as these ideas cluster about a central theme,. Mind-mapping leads to the creation of original prose or poetry. This means bringing to consciousness the formal and informal patterns of one's own thoughts or ideas and setting them out in written or multi-dimensional form. These thoughts and ideas tend to cluster as subordinated topical and subtopical bits of associated information surrounding a central theme or concept.

(Important Note: Whether the mind-mapping or clustering is made while taking notes about the ideas of others as you read, listen, and observe, or setting out notes about your own thoughts, the 'cluster pattern' or 'mind-map' that emerges around a central idea or concept will depend upon your prior experience, the nature of the new information filtering in at the the moment of mapping, and your conscious or unconscious purpose for the mapping.)

**Standard left-brained** approaches to note-taking include the use of a) complete sentences, b) phrases, c) lists and line, and d) numbers. These

involve basic *left-brained* memory principles of i) order, ii) number and, iii) sequence.

**Mind-mapping (or Clustering), in contrast,** uses both the right and left sides of the brain and, therefore, both *left-brained and right-brained* memory principles. These principles include: i) imagination, ii) association, iii) exaggeration, iv) contradiction, v) absurdity, vi) humor, vii) color, viii) rhythm, ix) the senses, and x) sensuality. These *right-brained* approaches increase the capacity to remember because they promote rehearsal in the short term memory and, thus, transfer to storage in the long-term memory. The use of *right-brained* approaches and the establishment of organized patterns of relationships also increase the possibilities for later access and recall of the information stored in the long-term memory.

**(Special note:** In TESD it is not considered necessary to make the same distinction which Buzan makes between mind-mapping and clustering. He considers mind-mapping as a formal exercise. A central theme or concept is written in a square in the center of a diagram. Topics are written on line branches and are attached to the center to indicate the relationship of the topic to the central theme. Branches have attached diagonal lines radiating from them on which ideas subordinate to the topics are written. Buzan considers 'Clustering' to be more informal. The central theme is written in a circle at the center of the page and is attached to topic and subtopics enclosed in other circles joined by arrows that indicate clusters of relationships between and among ideas. See Attachment number 1.).

### **When to Use Mind-mapping (or Clustering):**

Use Mind-mapping or Clustering: --

- in any 4MAT Quadrant or across Quadrant boundaries when a theme activity is introduced in the Right Mode and is followed immediately by Left Mode activity. Use depends on your purpose and appropriateness of the approach to the content you want taught and learned and the depth of recall you wish to achieve.
- when you want learners to see the connections or relationships between and among ideas to increase their understanding of a central idea and its component parts.
- when you want learners to use both the right and left sides of their brains, as well as to use fundamental memory principles related to both sides of the brain.
- when you want to increase learners' ability to recall and to be able to immediately and almost totally remember everything they write down by building up a multidimensional, associative, imaginative, and colorful memory notes.
- when you want learners to better understand, analyze, and think critically about whatever it is they are noting, while simultaneously giving them more time to pay attention to the speaker or the audio/video or printed resource from which they are learning.

-- when you want learners to become conscious of what they know about ideas associated with and grouped around a central theme and to use this knowledge to create a new synthesis as a summary statement with main and subordinate ideas or as a stimulus to create and express an entirely new idea. The latter goes beyond note-taking. Notes are created. Others, therefore, may take down your thoughts. The product may lead to creative writing (nonfiction or fiction prose or poetry), verse set to music, physical movement, new theory, new skills, etc.

( Note: Mind-mapping may be a strategy or technique, depending on whether it is used in relation to a method, in which case it is a strategy, or a strategy, in which case it is a technique or tactic. Whether used as strategy or technique, its use can be recommended as a framework for activities in 4MAT Quadrant 3 RM when trainees 'add something of themselves' or 4MAT Quadrant 4 RM when they are designing systems to integrate the concept they have just learned with their own real world as they claim ownership of the idea.)

### How to Use It: [Planning]

1. Use blank and unlined paper, if possible, or a slate or chalk board.
2. Identify a key memory image (right-brained), word or visual representation that summarizes the central theme or main idea of whatever it is you or the learner are or to attend to and teach or learn.
3. Place the memory image in a circle in the center of the paper, slate or chalk board. The image may be a written word or a drawing or picture of the theme.
4. From this central theme image the learner will draw a series of lines or arrows to connect circles of words or visual representations that cluster as ideas. These ideas are associated in increasingly subordinate groups as the central theme is analyzed and elaborated in terms of its parts. (Left Minded)

[Note: The central theme image which learners begin with is a 'whole'. Therefore, the activity begins with the right-mind. Dividing it into topics is a left-minded activity. But once divided each topic becomes a right-minded 'whole' that can be further analyzed as a left-minded activity in which topics are subdivided into subtopics. These, in turn, become 'wholes' that can be further divided into sub-subtopics, *ad infinitum* )

5. When mind-mapping or clustering is used as a stimulus for creating original prose or poetry, follow the same step-by-step procedures listed above. However, tell the learners that after a certain amount of time, they will begin to feel the need to create a new whole. (Trainer may set time limits) At this point learners are to review their mind-map and turn the paper over or put it aside and begin to write -- prose or poetry.

## How to Evaluate Mapping [Assessment]

Mind-maps are a highly individual form of representing information. Maps allow individuals to find the best way of remembering information by themselves. The suggestions above are not to be taken as rules, but as suggested guidelines. When the Trainers comment on the learners' maps, they can point out where the style of organization used by learners may create problems that learners should be aware of when such occur. The Trainer's criteria should always be how well the map works for the map maker, not an arbitrary set of rules. (adapted from Williams)

Success in the use of mind-mapping is judged by how well it helps learners --

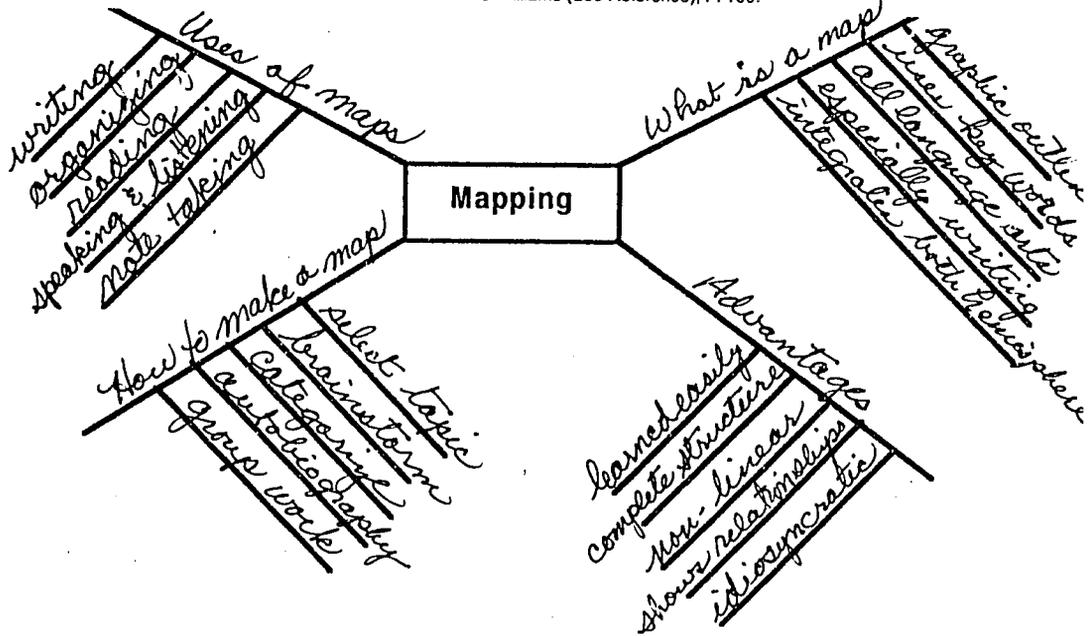

- a) to recall and use what others have said or written,
- b) to know what information and skills they know and can use,
- c) to create original syntheses (prose or poetry) by dividing a whole (central theme) into its components and, then, adding new information or by juxtaposing old ideas to form new relationships.

Assessment may be made by having learners use their notes or their original works in a think-pair-share discussion session. Such sessions will reveal the accuracy of the notes taken. They also will allow peers and teachers to assess accuracy of both the learners' notes and understanding of them. If the session involves original work, the surprise and joy of the session will indicate the success of the technique.

## Pedagogical Applications -- Metaphor

Extracted and Adapted by Dr. Donald G. W. Schutte from Linda Williams. *Teaching for the Two-Sided Mind: A Guide to Right Brain/Left Brain Education*. Prentice Hall, Inc., Englewood Cliffs, New Jersey 07632, 1983.

### What Are Metaphors When They Are Used As Teaching-Learning Strategy?

#### Definition from American Heritage Dictionary:

**Metaphor** (noun) A figure of speech in which a term that ordinarily designates an object or idea is used to designate a dissimilar object or idea in order to suggest comparison or analogy, as in this phrase -- evening of life.

Metaphors are the most powerful of right-hemisphere strategies because the process by which learning occurs is explicit. Using metaphor as a strategy reinforces the process of making connections or seeing relationships, providing new insights, facts and generalizations about a concept. Metaphors connect known to unknown, strange to familiar (in science) or familiar to strange (in literature and art). In short, metaphors organize and connect knowledge unlike the traditional linear, textbook approach that tends to separate and compartmentalize knowledge. This means, however, that the degree to which the use of metaphorical analogy is effective depends to a great extent on the learner's experience and the teacher's and/or learner's wisdom in selecting the metaphor that will serve the specific educational purpose.

As a teaching-learning strategy, metaphors are used to facilitate initial learning of information and to rehearse information in the short term memory before subsequently transferring it to the long-term memory for storage and easy recall. Learners see connections, recognizing common traits and principles ostensibly shared between two unlike objects or ideas contained within the metaphor.

Metaphors are an extremely efficient way to create a new synthesis that a) increases the understanding of facts, generalizations, and details concerning the two concepts contained within a metaphor and b) allows learners to rehearse and organize information in the short term memory. In place of separate attributes, metaphors offer a single image. These emerge when learners make analogous comparisons between the two concepts contained within the metaphor. Within the 'whole', this image contains most of the attributes of the person, place, thing or idea under consideration. The process of comparison also allows learners to see relationships that were not previously apparent and to create links or connections between the attributes of the person, place, thing, or idea under consideration and their own prior experience with it. It also helps learners to identify and remember facts, generalizations, and details about the concept the teacher wants them to remember.

Such comparisons allow learners to use the attributes of the brain's right hemisphere to enhance the learning process. Right-brain attributes include 1) simultaneous, non-linear processing, and 2) constant combining and recombining of many parts to create a large variety of new and unique spatial patterns, seen visually as wholes, or verbal descriptions of persons, places, or things and ideas.

Used as a teaching-learning strategy, metaphorical teaching is holistic. It constantly focuses on the processes of recognizing and understanding patterns and general principles that give meaning to specific facts. Each new unit is no longer an isolated set of information but an opportunity to make new connections, to gain insight into the new subject and learners' prior knowledge. When learning has a sense of integration and the emphasis is on seeing relationships, it is both more efficient and more satisfying. Metaphor provides the context for asking questions that make learning easier. Meaning in life is, after all, not in an object or idea itself. It is in the relationships between and among persons, places, things, and ideas!

### **When to Use Metaphor as a Teaching Learning Strategy:**

Metaphor as a teaching-learning strategy is used effectively at all stages of instruction. It is applied when introducing a concept (Q 1 R) and when clarifying a concept (Q 2 R). It is used as a means for reviewing what has been learned about a concept (Q 3 R), or testing how well a concept which has been learned can be applied. (Q 4 R). At each stage it may stimulate writing and discussion.

*(Consider the meaning of this quote from Robertson Davies "Experience is not what happens to a man; it is what a man does with what happens to him.")*

### **Use Metaphor When You Want :**

- to place a concept within the realm of the concrete world, forging a connection between the abstract concept and the learner's experience.
- a concept to be more engaging and satisfying as an experience than giving a simple dictionary definition.
- to deepen the understanding of a concept and to clarify facts and details where there is confusion
- to tease the mind to think about and explore the meaning of a concept further.
- learners to use metaphorical thinking as a part of their repertoire of thinking skills.

- to be efficient in the sense that new information need not be taught from 'scratch' but use can be made of what the learner already knows. Thus, learners need not be overpowered by a large body of separate, compartmentalized knowledge. The traditional linear, textbook approach separates and compartmentalizes knowledge. This approach confronts and overpowers learners with a great mass of 'new' factual and detailed information and generalizations. These can be overwhelming! In contrast, metaphors organize and connect knowledge.
- to encourage learners to bring their own experiences into the classroom by proposing their own metaphors.
- to deepen learners' understanding of literature or science and to integrate knowledge drawn from different subject areas.

Think for a moment here about 4MAT Applications: 4MAT moves in a circle from Concrete Experience to Reflective Observation to Abstract Conceptualization to Active Experimentation and back to Concrete Experience. The Action words as you move around the circle are Connect - Analyze - Image - Define- Tryout - Apply - Evaluate - Integrate. Apply this information to the above generalizations to determine when to use Metaphor when planning, developing, and teaching lessons and materials.

### **How to Use Metaphor As A Teaching/Learning Strategy:**

**[Planning]** Select a metaphor and plan a lesson around it. It is a five-step process:

1. Decide exactly what propositional, procedural, or conditional information you want to teach concerning a specific concept.
2. Identify the defining characteristics concerning the concept or topic you have chosen?
3. Generate several metaphors from your own experience that you feel will teach the types of facts and generalizations you want to teach. Select the one metaphor that best communicates the concept you have chosen to teach.
- 4 Clarify the discrepancies or the ways in which the analogs do not fit or are not similar to each other as well as the ways in which they are similar.
5. Make a lesson plan that includes how you will elicit metaphors from students. For example, directly, ask learners, "What do you know which is like the concept or object being studied.?" Ask, "How are they similar?" (compare) "How are they different?" (contrast)

### **[Presentation]**

1. Use metaphor to introduce a lesson or entire unit when a) learners are completely unfamiliar with a concept and need help in relating it to something they already understand or b) learners are so familiar with the concept that it no longer engages their attention or interest. [Q 1 R]
2. Use metaphor to clarify a specific point. [Any Q R]
3. Use metaphor to review. [Q 3 R, Q 4 R]
4. Use it to test comprehension. [Q 2 R, or Q 3 R] (See below under assessment)

Note: Metaphor, used as strategy, can be used in the left mode components in all quadrants, as well as in the right-mode quadrants. However, when teachers approach the use of metaphors by asking learners to analyze a specific metaphor, care must be taken to keep learners from feeling that metaphors are generated analytically. Metaphors are a product of associative thinking, which is a right-minded process. They are a 'whole', but they can be understood by analyzing them. Analysis is a left-minded process. When you ask learners what a metaphor suggests to them or what images and/or sounds or feelings it stimulates, they can gain understanding of facts and details from their analyses and by comparing shared and idiosyncratic meanings with their peers.

### **How to Evaluate Metaphor Used As A Teaching/Learning Strategy: [Assessment]**

Use metaphor as an assessment technique. Assessing learning outcomes using metaphor transforms the 'dead learning time' of traditional testing into an opportunity to practice valuable skills. For example, consider the following two questions from a history examination:

1. List the major events leading up to the Saur Incursion in Afghanistan and explain the importance of each as a factor in bringing about the Incursion.
2. How was the period leading up to the Saur Incursion in Afghanistan like the building up of a *thunderstorm*? Be sure to include in your analogy the major events leading up to the Incursion (or *storm*).

When using metaphor to teach substantive material, teachers can evaluate whether the learners' connections are based on what teachers consider to be important aspects of the subject.

When teachers evaluate written responses to questions concerning a metaphor, the focus of or criteria for the evaluation should be on how well learners use the metaphor to discuss the important points about the subject which have been or are being studied.

Also, teachers can make a list of important characteristics that define the similarities and differences between the two concepts within the metaphor. As a means to evaluate learners' understanding of the concept, learners may be asked to create a metaphor that covers all the important points surrounding a concept and explain it in terms of the similarities and differences between the two concepts compared within the metaphor. The teacher's prior list of important points becomes the **criteria** by which the substantive information is judged. Extra points may be given for particularly imaginative or creative metaphors or analogies suggested by the learner.

**LEARNER OUTCOMES** derived from using metaphor as a teaching/learning strategy can be evaluated either from the standpoint :

- a) of the learners' ability to comprehend and/or competency to use important substantive information creatively and as means of solving problems according to predetermined criteria.
- b) of the learners' ability to understand metaphor and use it as a thinking tool according to predetermined criteria.
- c) of the learners' ability to exhibit listening skills according to predetermined criteria.
- d) of the learners' ability to exhibit oral and written communication skills in naming, describing and explaining the analogies within the metaphor according to predetermined criteria.
- e) of the learners' ability to discover and exhibit the joy in learning according to predetermined criteria based on identifying and observing approach or avoidance behavior. (Affective domain)

Remember! Using metaphor as a learning strategy is a new skill for most learners; therefore, it is best to give them plenty of practice before you do an evaluation. The validity of the use of this strategy must not depend on one single lesson. Evaluation of learners' use of metaphors is not a matter of assessing what they have done wrong. Learning to use metaphor is a process. Processes are not learned at one sitting. Processes demand that teachers pay attention to learners over time. In evaluating a learner's metaphorical abilities (and all other right hemisphere processes, the teacher's job is not so much as to judge proficiency as it is to assess learners in terms of what they need to help them improve their performance. If a learner has trouble analyzing the similarities and differences between concepts within the metaphor, don't consider that to be a statement of ability. Rather take the 'proactive' attitude that it is a sign that a learner needs further work in that area. Learners must trust that the teacher will not ridicule, nor permit other learners to ridicule, the connections they make when they risk making a comparison or contrasting analogs. The teacher should never 'put down' a learner's connection nor ignore it. Ignoring a response is a negative, reactive response.

### Other Things to Remember:

A teacher may be deceived by how easy it is to describe the metaphorical process. **To listen for students' connections and help them articulate and clarify their thoughts** requires skill and practice on the part of the teacher. This produces very basic changes in a classroom.

It is tempting to think up a metaphor five minutes before class, but this is dangerous since you may find yourself face to face with a class and a metaphor that doesn't fit your purpose or focuses on a characteristic you did not want or need to emphasize. The point is plan your use of metaphors to do what you want them to do.

**\*\* Note :**

There are several problems you may encounter when you begin using metaphor. Most are a result of content goals that are not absolutely clear. **Solution:** Make sure your propositional, procedural, and conditional content goals are absolutely clear so that comparison and contrast may be made between concept and concept analog.

Problem 1: You can't find a metaphor that fits what you want to teach.

- 1.1: You may be trying to teach too many things at once. Ask yourself what is the most important thing for learners to understand and look for a metaphor for that; other points may be worked in as discrepancies.

Problem 2: Questions arise about the analog that confuse you or the learners.

- 2.1: Either you or your learners may not know enough about the the set of analogs you have chosen. If learners know more about either of them than you know, ask them to help clarify, but keep focusing on the general principle(s) you want to teach. If learners are unfamiliar with your set of analogs, use another set of analogs or back off the use of metaphor as a strategy until you or your students find a set of analogs with which everyone is familiar.

Problem 3: Learners become so interested in the an analog that they generate too many ideas and discussion wanders and loses focus.

- 3.1: Metaphors are seductive; they can lead in many directions. You can help clarify connections by noting them on the blackboard. Be sure to sum up by stressing the main points you want remembered. Also include any significant points which emerge during discussions.

Problem 4: Learners generate metaphors based on connections that are not of primary importance.

- 4.1: This is not a problem as long as you clarify for the class the relative importance of connections for understanding the subject. Be sure to reward even less effective metaphors. They demonstrate metaphorical thinking which you as a teacher should encourage. Never put down or ignore a learner's metaphor..

---

To promote the use of metaphor in the classroom is to promote the search for genius. Please consider the following quotes from , The Puzzle of Genius, *Newsweek*, June 28, 1993, pp. 34-42.

"Through analysis of hundreds of history's greatest thinkers, scholars are teasing out what styles of thought, what temperaments, what personalities characterize the Darwins, Titians, Mozarts and Napoleons of history. Their work promises to help ordinary mortals become more creative (though not certified geniuses) and to teach schools and parents how to nurture unusual intelligence. ...."

"If one style of thought stands out as the most potent explanation of genius, it is the ability to make juxtapositions that elude mere mortals. Call it a facility with *metaphor* (emphasis mine), the ability to connect the unconnected, to see relationships to which others are blind. 'The images that scientists have as the do science are metaphorical,' says Roald Hoffmann of Cornell University. Hoffman shared the 1981 Nobel Prize in Chemistry for the most significant breakthrough in theoretical organic chemistry; a way to predict from first principles whether a reaction will occur. He is also a poet. 'The imaginative faculties are set in motion by mental metaphor. Metaphor shifts the discourse, not gradually, but with a vengeance. You see what no one had seen before.' "

## **Pedagogical Applications - Synectics**

Extracted, Adapted, & Related to TESD and 4MAT\*\* by Dr. Donald GW Schutte from ASCD's *Teaching Strategies Library: Part II: Synectics*. The development of the Synectics Strategy is credited to W. V. Gordon and ASCD adapted the Synectics Strategy. The 'Library' entry is from his work.

### **What Is The Synectics Strategy?**

Synectics is a special case use of metaphor. It expands the use by expanding metaphor to become a teaching strategy that helps learners to deepen their understanding of the many details, generalizations, and meaningful relationships that must be remembered about a concept they are studying. Simultaneously learners increase their ability to use analogical thinking as a means to create solutions to problems or explore new ways of doing things.

The Synectics Strategy moves through four phases: 1) **Direct Analogy**, 2) **Personal Analogy**, 3) **Contrast**, and 3) **New Analogy**.

### **When To Use Synectics:**

1. Use Synectics as a teaching learning strategy if you want learners to deepen their understanding of the many facts, details and generalizations about a concept that must be rehearsed and organized and stored in the long-term memory in such a way as to permit easy access and recall..
2. Use Synectics if you want learners to learn to use analogical reasoning as a means of exploring new ways of doing things.
3. Use Synectics if you want learners to use their imagination as one means of solving problems.

### **How To Use Synectics: Planning Stage:**

When using Synectics to develop a lesson relate the general steps listed below to the specific concept, topic, or subtopic being developed:

1. Decide what idea (concept) you want learners to explore using metaphor and analogical reasoning.
2. Describe some of the key components or characteristics that make up the concept that can be used as criteria for distinguishing this concept from others with which it may be confused.
3. Decide what are some things in your learners' personal experiences that resemble the concept. List at least four.
4. Select one and describe some of the connections between the concept and the direct analogy you have selected. What are the similarities that characterize the connection?

5. Decide what are some questions you might ask to help immerse your learners in the analogy, i.e., the relationship between the analogous connections within the metaphor. List at least four questions.
6. Decide what some of the differences are that learners should notice about the relationship.
7. Decide how to stimulate learners to create their own analogies concerning the concept, topic or subtopic under consideration. Suggest several ways and then select one.

[Note: Because of steps 4 and 6, above, and the need to establish criteria in step 2, above, you may want to combine the Synectic strategy with the 'Compare and Contrast' strategy described elsewhere in the TPRB section of the Trainers Manual.]

### **How To Use Synectics: Implementation Stage:**

When using the Synectics strategy as an activity, these are the step-by-step procedures that are stated here as generalizations but that must be restated specifically in relation to the concept, topic or subtopic being taught.

#### **Phase 1: Direct Analogy Phase:**

1. Teacher and learners review and describe a key concept learners have been studying.
2. Teacher and learners identify the key elements of the concept.
3. Teacher presents the learners with a metaphorical analogy for the concept.
4. Teacher asks learners to explore the connections between the concepts within the metaphor.

Example: i) A language class is studying *contractions* in English class, e.g. *can't, don't, won't, doesn't*.

ii) Teacher asks class to describe the nature of contractions, i.e. "What are the essential characteristics of contractions which can be used as criteria to judge whether or not a word may be labeled or defined as a contraction?"

iii) Teacher then asks, "How is a contraction like a can of frozen orange juice?"

iv) Learners may then suggest that both contractions and frozen orange juice are concentrated, both have something removed, both can be returned to their original form by adding something.

## Phase 2: Personal Analogy Phase

1. To deepen learners' perceptions, Teacher asks learners to pretend they are the idea or object being compared to the concept being studied.  
Example: "A contraction is like a can of frozen orange juice." *Be* the can of orange juice. Describe your ideas and feelings about being a can of frozen orange juice."
2. Teacher asks learners to write sentences beginning with the personal pronoun, "I" , to describe the experience of *being* the idea or object. (See 1, above.)
3. Learners use these sentences to identify new and unexpected analogous connections between the two ideas contained within the metaphor.

## Phase 3: Contrast Phase

1. Learners focus on the differences between the two ideas within the metaphor.

## Phase 4: New Analogy Phase

1. Learners are encouraged to use what they have learned, i.e., the characteristics and criteria involved in the analogs, to create and explain their own metaphors for the concept they are studying. This helps learners to develop the ability to see analogies independently.

**How to Evaluate Synectics [Assessment]:** Answer the following questions!

1. Are learners able to develop and explain metaphors?
2. Are learners able to use analogical reasoning in discussing the concept that is at the heart of the lesson?

## **Things to Remember about Synectics:**

1. Give learners the opportunity to use simple analogies and metaphors before using this strategy. (See Pedagogical Applications - Metaphors)
2. Make the analogies relate to the learners' personal experiences.
3. Find an imaginative way to help learners become the Direct Analogy . (See, Phase 1, above.)

### **\*\* Note )**

- \* ASCD is Association for Supervision and Curriculum Development, Alexandria, Va.
- \*\*4MAT is a registered Trademark of Excel, Inc., and Bernice McCarthy of Barrington, IL.

## **Tape Application Index - DL1**

Extracted, Adapted, & Related to TESD and 4MAT\*\* by Dr. Donald G.W. Schulte from ASCD's *Dimensions of Learning -- Dimension 1 -- Helping Students Develop Positive Attitudes and Perceptions About Classroom Climates.* (R. Marzano, et al)

### **All 4MAT Quadrants**

**HELPI STUDENT FEEL ACCEPTED.** Students feel accepted when:--

1. Teacher has established a 'connecting' relationship with each student in class.
2. Teacher monitors own attitude toward individual students and actively sets up positive mental sets regarding 'problem students'.
3. Teacher engages in classroom behaviors that overtly treat students equally and positively.
4. Teacher responds positively to students' incorrect responses or lack of response.
5. Teacher provides students with opportunities for cooperative learning.
6. Teacher directs activities which help students develop their own strategies for gaining acceptance of peers.

**HELPI STUDENTS DEVELOP A SENSE OF COMFORT AND ORDER.**

A sense of comfort develops when: --

7. Teacher frequently and systematically uses activities that involve physical movement.
8. Teacher allows students to identify their own standards for comfort and order.
9. Teacher introduces concept of 'back tracking' to help students mentally block out troublesome, distracting thoughts.

A sense of order develops when:--

10. Teacher establishes and communicates classroom rules and procedures.
11. Teacher establishes clear policies about the physical safety of students.
12. Teacher is aware of and takes steps to stop teasing or threats in or outside of the classroom.

### Sample Lessons:

**Science:** How is the atmosphere like a blanket? This is a **Direct Analogy** question posed after studying a unit on the atmosphere in which learners have discussed the gases in the atmosphere, nitrogen, oxygen and carbon dioxide cycles, the layers of the atmosphere, the ozone layer; the greenhouse effect; convection; conduction; radiation; the way atmospheres vary on different planets. Follow the procedures for planning and implementation given above.

**Mathematics:** Imagine you are nearing the end of a unit on the addition and subtraction of fractions. Design a Synectics lesson that will help your students remember important information about fractions by creating a direct analogy and then exploring some of the connections on your own.

Design a direct Analogy: How is a \_\_\_\_\_ like a \_\_\_\_\_? Answer this question and proceed with planning and implementation steps mentioned above.

## **Tape Application Index - DL1**

Extracted, Adapted, & Related to TESD and 4MAT\*\* by Dr. Donald G.W. Schutte from ASCD's *Dimensions of Learning -- Dimension 1 -- Helping Students Develop Positive Attitudes and Perceptions About Classroom Climates.* (R. Marzano, et al)

### **All 4MAT Quadrants**

**HELPI STUDENT FEEL ACCEPTED.** Students feel accepted when:--

1. Teacher has established a 'connecting' relationship with each student in class.
2. Teacher monitors own attitude toward individual students and actively sets up positive mental sets regarding 'problem students'.
3. Teacher engages in classroom behaviors that overtly treat students equally and positively.
4. Teacher responds positively to students' incorrect responses or lack of response.
5. Teacher provides students with opportunities for cooperative learning.
6. Teacher directs activities which help students develop their own strategies for gaining acceptance of peers.

**HELPI STUDENTS DEVELOP A SENSE OF COMFORT AND ORDER.**

7. Teacher frequently and systematically uses activities that involve physical movement.
8. Teacher allows students to identify their own standards for comfort and order.
9. Teacher introduces concept of 'back tracking' to help students mentally block out troublesome, distracting thoughts.

A sense of order develops when:--

10. Teacher establishes and communicates classroom rules and procedures.
11. Teacher establishes clear policies about the physical safety of students.
12. Teacher is aware of and takes steps to stop teasing or threats in or outside of the classroom.

**HELP STUDENTS DEVELOP POSITIVE ATTITUDES AND PERCEPTIONS ABOUT CLASSROOM TASKS:**

**HELP STUDENTS PERCEIVE LEARNING TASKS AS VALUABLE.**

1. Teacher must develop a sense of academic trust that is observable in the classroom.
2. Teacher must help students to link classroom tasks to their own interests and goals.
3. Teacher asks students to generate tasks that apply to their interests and goals.

**HELP STUDENTS BELIEVE THEY HAVE THE ABILITY TO PERFORM LEARNING TASKS.**

4. Teacher must provide and peers must be taught to provide positive feedback.
5. Teacher must encourage students to use positive self-talk.

**HELP STUDENTS UNDERSTAND AND BE CLEAR ABOUT LEARNING TASKS.**

6. Teacher must identify and articulate the specific behaviors expected of students during and after completion of learning tasks.
7. Teacher breaks complex tasks into smaller steps or parts.

Extracted or Adapted, & Related to TESD and 4MAT\*\* by D. Schutte from ASCD's\* --  
*Dimensions of Learning -- Dimension 2 --- Acquire and Integrate Knowledge.* (R. Marzano, et al)

### **What Is the Strategy for Acquiring and Integrating Procedural Knowledge?**

This strategy provides the means to help students construct models of skills, procedures and processes, give shape to their knowledge of processes and procedures, and internalize processes and procedures to the point of automation or near automation of applications.

#### **When to Use It :**

Use it when developing background material concerning skills, procedures, and processes for the Teacher's Academic Resource Book:

1. To Help Student Construct Models for Procedural Knowledge
2. To Help Student Shape Procedural Knowledge
3. To Help Student Internalize Procedural Knowledge

The use of this strategy must be coordinated in the Teacher's Academic Resource Book when developing background materials for declarative or propositional knowledge concerning the same concept. Also by giving consideration to the conditional knowledge related to the skill, procedure, or process, one will have provided the foundation for relating a specific skill, procedure, or process to the lives of individual students.

#### **How to Use It:**

##### **1. To Construct Models of Procedural knowledge:**

- 1.1. Have students "think aloud" to explain the process or procedure they are using to demonstrate a new process, skill or procedure they have just learned. (Q3,LM)
- 1.2. Present students with a written set of step-by-step procedures or have students write their own set as they demonstrate the acquisition of the new process or skill. (Q2, LM)
- 1.3. Teach students to create flow charts. (Q2,LM -- Mastery Lecture, Q3,LM:: Q 4,LM)
- 1.4. Teach students to mentally rehearse the steps involved in a skill or process. (Q2,LM::Q3, LM)

2015

## **2. To shape Procedural Knowledge:**

- 2.1. Teacher or students demonstrate and provide practice in the important variations of the skill or process. (Q3,LM)
- 2.2. Teacher or students point out common errors and pitfalls. (Q2 LM :: Q3 LM)
- 2.3. Teacher provides variety of situations in which students can use a specific skill or process. (Q3, L orRM :: Q4 LorRM)

## **3. To Internalize Procedural Knowledge:**

- 3.1. Teacher helps students set up a practice schedule. (Q3, LM)
- 3.2. Students, individually or in peer groups, chart their accuracy when new skills or processes are practiced. (Q3, LM)
- 3.3. Students, individually or in peer groups, chart their speed when learning a new skill or process. (Q3,L or RM)

## **How to Evaluate It?**

Are students able:

1. To perform important skills, procedures, or processes without error or within an acceptable amount of error.
2. To perform important skills, procedures, or processes quickly enough to use them effectively.
3. To perform important skills, procedures, or processes easily enough to use them effectively
4. To perform important skills, procedures, or processes in a variety of appropriate settings.

Tools for assessing procedural knowledge include students' own charts of accuracy and speed along with teacher observation, which are simply anecdotal comments written while observing students using the important skills, procedures, or processes. Student Self Assessment is an important learning method.

## Tape Application Index - DL3

Extracted, Adapted, & Related to TESD and 4MAT\*\* by Dr. Donald G.W. Schutte from ASCD's\* -- Dimensions of Learning -- Dimension 3 -- Extending and Refining Knowledge (R. Marzano et al)

### What is one strategy used to help "Students Extend & Refine Knowledge" :

**Comparison** To examine the similarities and differences between or among two or more persons, places, things or ideas by identifying the characteristics that determine how one is similar or different (contrasts) from the others and, then, drawing conclusions concerning the whole relationship.

### When to Use Comparison:

- When you want students to compare and contrast two ideas they might otherwise confuse. [Q 1L, Q2L]
- When you want students to compare two ideas and find applications and form generalizations. [Q 3L, Q 4L]
- When you want your students to review material previously taught. [Q3L]
- Comparisons can be used in all left mode quadrants, but also in right mode quadrants when metaphor and analogue are compared.

### How to Use Comparison: [Planning]

1. Introduce comparison to students as a learning strategy.
2. Present students with the steps involved in the comparison process.
  - Select two items, ideas, or events you want to compare related to the concept or topic you want to teach.
  - Identify some resources (including using yourself or your materials as resources) the student can use to learn about the ideas.
  - Select the characteristics of the items on which you want to base your comparison, i.e., establish your criteria for making the comparison which will help students to focus on what is most important.
  - Create an application activity that will help students reflect on what they have learned.
  - Provide the resources and ask students a question which provokes them to name, describe and explain how the items are similar and different with respect to the characteristics and the criteria you selected.
  - Record the students' responses on a chalkboard or overhead.
  - Use your discussion question to explore the implications and the applications, i.e., summarize and/or draw conclusions about what you have learned.or, more simply put, teach students to ask the following important Questions:
    - \* What do I want to compare?
    - \* What are the important characteristics about each item that can be used as criteria for comparing similarities and differences?
    - \* How are they the same? How are they different?
    - \* What did I learn from making the comparison?

3. Provide students with ways of graphically representing the comparison process.
4. Present students with teacher-structured comparison tasks.
5. Present students with student-structured comparison tasks.
6. Present students with expanded comparison activities.

**How to Evaluate Comparison Activities: [Assessment]**

1. Assess the completeness of the student's use of the strategy of comparison.
  - Did the student clearly identify the elements (specific pieces of information) to be compared?
  - Did the student clearly state the characteristics on which the elements were to be compared?
  - Did the student clearly state the extent to which each element possesses each characteristic?
2. Assess the accuracy and effectiveness of the student's thinking during the comparison task.

## Tape Application Index - TSL .1

Extracted or Adapted and Related to TESD & 4 MAT\* by Dr. Donald G.W. Schutte from ASCD's\*\*  
-- *Teaching Strategies Library: Part I: Mastery -- Mastery Lecture Strategy*

### What is Mastery Lecture?

Mastery Lecture is a modern lecture strategy designed to give students a way to learn. The lecturer's performance is memorable and students remember the information about a concept or topic which the teacher deems to be important. Mastery Lecture is based on the work of David Ausebel and Madeline Hunter.

Simply put, the strategy works by keeping in mind the basic principles of memory -- connecting, organizing, and elaborating. It helps students to connect concepts to their personal life (Q1,RorLM, Q2,RM), to organize information in ways that can be remembered (Q2,LM and Q3,LM), and elaborate on the data (Q3,RM, Q4,LorRM). It stimulates learning in at least two channels.

### When to Use Mastery Lecture:

When you want students to remember and understand propositional or declarative knowledge, that is facts and/or important relationships between and among facts, i.e., generalizations, e.g., classifications, criteria, conjectures [opinions], principles, rules, theories, axioms, laws, universals. Also when you want students to remember and understand, and use specific skills, procedures or processes. (Q2,LM)

Use Mastery Lecture Strategy to teach a concept or topic in order to help students:

- to focus their attention. (Q1 R or LM, Q2, RM)
- to identify main ideas. (Q2,LM)
- to keep meaningful notes. (Q2, LM)
- to perceive the relationships between general ideas and specific instances. (Q2, RM:: Q3,L or RM :: Q 4L orRM)

Mastery Lecture can help teachers to:

- teach study skills such as note-taking and memorization.
- increase student participation.
- provide a lot of information in an organized, structured format.
- monitor students' understanding and adjust presentations to students' needs.
- adapt lessons to a variety of students' learning styles & modality preferences.
- adapt lecture method to any grade level.

### How to Use Mastery Lecture: [Planning]

1. Select a topic and identify important information.
2. Design an Advance Organizer.
3. Select questions for the learners to answer about the information.
4. Present the Advance Organizer.
5. Provide the information through continued lecture, film, reading, tape, etc.
6. Ask questions and secure closure.

### How to Evaluate Master Lecture: [Assessment]

1. Are the students able to recall what they have learned?
2. Does their ability to sustain attention develop over time?

### Things to Remember:

1. The human mind can easily store seven new bits of information. (Q2, LM)
2. Make these key bits of information vivid. (All Q, RM's)
3. Let the students secure closure. (Q4, LorRM)

### \*\* Note:

- \*\* Coordinate with ASCD's Facilitators Manual developed by Patricia Wolfe & Pam Robbins with accompanying videotapes, especially Tape 1: Instructional Decisions for Long-Term Learning, 1987. See Memory Model below as reference.

## Tape Application Index - TSL II.4

Extracted, Adapted & Related to TESD and 4MAT\*\* by Dr. Donald G.W. Schutte from ASCD's -- Teaching Strategies Library: Part II Involvement -- Circles of Learning

### What is the Circle of Knowledge Strategy?

This strategy provides the teacher with a means to meet the criteria which characterize a good discussion. Good discussions are characterized by high levels of participation, clear focus, and good thinking. Such discussions are active, clear, and meaningful.

[\*\*NOTE: This total strategy incorporates the strategy of **THINK-PAIR-SHARE**.]

The Circle of Knowledge Strategy has three phases:

**Phase I:** 1. Teacher begins discussion by posing a question which focuses on concept or topic being considered. (Q1, RM::Q2, RM) This 'focus question' gives clear direction to the discussion. (*Focus Questions* are called 'kindling' questions in this strategy.)

2. The teacher also asks questions which help students relate the concept or topic being considered to their prior knowledge. (Q1, RM, related to Q2, RM) (These questions are called 'sparking questions' in this strategy.)

3. While working with these two types of questions, as a way of internalizing the questions students are encouraged to think, to write down their provisional ideas, and to share their ideas with partners or small groups. This builds the focus necessary for the large group discussion in Phase II, below.

**Phase II:** 1. Students explore and revise their ideas related to the two types of questions asked in Phase I. (Q1, LM and Q2, L M)

2. Teacher helps students in large group discussion to expand and clarify their thinking by organizing and recording, or allowing students to organize and record their ideas on the board, and/or asking student to restate what they heard other students say and to cite reasons for their ideas, and/or to react to one another's ideas, and/or play roles that stimulate the development of new perspectives by personalizing and actualizing the concept in terms of possible behaviors or applications.

**Phase III:** Teacher ask 'summarizing questions' that require students a) to summarize knowledge in an organized, structured way, b) to identify ways in which their thinking has changed during the course of the previous discussions, and c) to raise questions that still need to be answered as a step to further learning.

### **When to Use The Circle of Learning Strategy**

Use it when you want your discussions to have wide student participation, keep their focus, and encourage students to develop and deepen their thinking about a concept or topic.

Use it when you want to help students internalize a question by thinking about it, visualizing their ideas about it, communicating in writing and in small and large groups about it.

Use it when you want students to learn to reinforce and support their statements with logical, clear arguments, to learn to effectively listen to others, and to develop new insights.

Use it when you want students to learn to apply a concept to their own lives as a result of processing their thoughts.

### **How to Use The Circle of Learning Strategy [Planning]**

1. Establish a focus question as the topic of discussion. (Q1,RorLM)
2. Develop a 'sparking' question to link students' experience with the topic. (Q2,LM)
3. Have students write down their thoughts and then meet and discuss them in small groups. (All Q's)
4. Conduct a large-group discussion using such techniques as recording student's thoughts, restatements by other students, reacting to one another's ideas, and role playing. (Q2,LM & Q 3 LorRM)
5. Present a summarizing question to pull everything together. (Q4,LorRM)

### **How to Evaluate The Circle of Learning Strategy: [Assessment]**

1. Are your students participating actively and effectively in discussions?
2. Can your students support and review generalizations?
3. Are your students listening more actively?

### **Things to Remember:**

1. Your focus questions should be broad and should promote good dialogue. (Q 2 LM)
2. Sparking questions are specific and draw entirely on your students' experience. (Q1,RorLM)
3. Summarizing questions ask students to reflect on and apply what they have learned in discussion. (Q3R & Q4RM)

OVERVIEW: 4MAT FORM 0

Subject: Mathematics

Grade Level: One

Concept: Whole Numbers Operations

Topic: Addition

Aim, Goal, Outcome:

Understanding concept of addition in whole numbers system and its properties such as commutative property and zero property for numbers(0-9)  
 Reading and writing addition sentences(0-9)  
 Application of addition in to the learners daily life

BRIEF OUTCOME INDEX

Quadrants	Segments	
R-M	A	Learners connect their numbers experience to the addition of whole numbers (0-9)
L-M	B	Learners examine and analyze their number experience concerning addition of whole numbers (0-9)
R-M	C	Learners image the examined and analyzed numbers experience related to the addition of whole numbers (0-9)
L-M	D	Learners define concept of addition and create activities to read and write-addition sentences (0-9) and to use commutative and zero
L-M	E	Learners try out or practice commutative and zero properties of addition sentences.
R-M	F	Learners state the addition examples such they show properties of commutative and zero
L-M	G	Learners integrate their work by applying with examples on addition sentences, commutative and zero properties.
R-M	H	Learners use what they have learned about addition in their real life.

ACTIVITY INDEX:

Quadrants	Segments	
-R-M	A	Teacher creates an experience to motivates learners by asking questions-Teacher more active.
-L-M	B	Teacher group learners and gives each group a number and asks learners, How many ways they can show the given number. <i>Teacher more active</i>
-R-M	C	Teacher uses a story problem to help learners to introduce addition by using the words "and" and "in all" which they are familiar to. <i>Teacher more active</i>
-L-M	D	Teacher uses models for teaching addition - teacher more active
-L-M	E	Practice activity sheets on addition - learners more active
-R-M	F	Learners should apply addition and add some examples. <i>Learners more active</i>
-L-M	G	Learners explain their examples to their teacher and classmate. <i>Learners more active</i>
-R-M	H	Learner apply addition in real life, learners more active.

*26*

Pedagogical, Method, Strategies, Techniques Index:

Quadrant	Segments	Method	Strategies	Techniques
Quad 1	A	Discussion and interaction	Questioning	creating the experience
//	B	Discussion and interaction	Grouping	Bridging
Quad 2	C	Informational	Analyzing	Bridging
//	D	Informational	Physical and mental model	Advance organizer
Quad 3	E	Coaching	Practicing	Questioning
//	F	Coaching	Experimentation	Questioning

آموزنده گان "دکتر" آورنده فرزند

مفید در ریاضیات : تعریف : اول  
 مفیدم : یکتا چهارگان را عدد اول میگویند. عنوان : جمع  
 این سه عدد [ در جدول ضرب درک کنید ] عددی از اعداد اول که با عدد اول دیگر یکنواخت است. این سه عدد را جمع کنید و حاصل را با عدد اول دیگر جمع کنید.  
 آموزنده گان : این متن مفید است و اگر در کتابها پیدا کنید به قیاس عملی نرسیده باشد  
 به ارزش آن موقع دادن میشود تا مفهوم را با نمودار جواب به سوال " این مفهوم چه بارها گفته است؟  
 نقش هر - زمانی و فراموش آوری بسیار - میشود مورد استعمال ( فراموش آوری بسیار )  
 در مورد مفیدم داده شده ( تا یکبار در متن عملی ) در کتابها پیدا شود. شکر در این بخش مثال میباشد

3 Lm

نتیجه مطلوب است - به آموزنده گان باید وقت داده شود که نتایج آموزنده گانه را مستقیماً  
 فراموش نماند

نمایش : فعالیت اول : معلم جهت مشق و تمرین حقایق و معجزاتی که در این کتاب آمده است : ①  $2+3=5$  چطور  
 یک مثال جمع است ؟ ② چطور  $(2+5=7)$  یک مثال قانون فرد جمع است ؟ ③ چطور  $(2+3=5)$  و  $(3+2=5)$  یک مثال خاصیت  
 تبدیلی در جمع است ؟ در صورت لزوم معلم میتواند توسط اشیا و اشیاء شماره

فعالیت دوم : ۱- چطور این شکل  $(XXXX)$  با  $3+4=7$  ارتباط دارد ؟ جهت مشق به ۱۰۰ کتاب برگ  
 فعالیت سوم : ① چرا در نوشتن جدول جمع مهم است ؟ صورت بخاطر یک در هر یک از هر سه از آن استفاده میکنند

استورهای من تدریس استرالیایی با کتابک ما : ستاره بزرگی : مشق و تمرین : نشان عدد از نوشتن  
 تکلیف : سوال و جواب

مراود مورد استعمال با اعداد شده : تحفه ۱۱۱ درین جهت مشق و تمرین و مواد تحفه بکتاب توسط معلم  
 کتاب درین کتابگردان : سنگین ، چوبک ، منبرک ، چوبکی ، برگ و غیره

از اول : معلم باید کیفیت کار آموزنده گان را با بررسی کند  
 توسط مشاهده و مشاهده - ( یعنی ) سوال و جواب و غیره

مقدمه ریاضیات صنف اول  
 هدف از این کتابچه آشنایی با مفاهیم و روش‌های حل مسئله در ریاضیات است. این کتابچه به گونه‌ای طراحی شده است که به دانش آموزان کمک کند تا مفاهیم ریاضی را به سادگی یاد بگیرند و در حل مسائل روزمره به کار ببرند. این کتابچه شامل تمرین‌ها و مثال‌هاست که به دانش آموزان کمک می‌کند تا مفاهیم ریاضی را به سادگی یاد بگیرند و در حل مسائل روزمره به کار ببرند.

البع سوم - مرداد

نقدیه معلوم :- آموزنده گان باید مفهومی را که در دست و پایشان نهاده است از نظر معنی درآ کرده و در رابطه با آن قدرت تخیل و تخیل را در خودشان نشان دهند.

- مثال ۱ - فعالیت اول :- معلم به استفاده از سوال اول مفاهیم آموزش می‌دهد و آنرا با تخته و گچ می‌نویسد.
- ۱- سوال  $5 = 2 + 3$  را با مثال دیگری بنویسید و بگویید که  $(2 + 3 = 5)$  در این سوال  $2$  و  $3$  در این سوال  $5$  است.
- فعالیت دوم :- فایده های ریاضی (  $5 + 5 = 10$  ،  $5 + 5 = 10$  ،  $2 + 3 = 5$  ،  $3 + 2 = 5$  ،  $4 + 1 = 5$  ،  $5 + 0 = 5$  ) در کتاب فایده های ( 6 و 7 ) با دریافت تمام قسمت کتاب مشخص است از صفا کتاب ریاضی استفاده نماید.

استوری های این درس را با دانش آموزان بخوانید و با آنها بحث کنید.  
 مقود : فرم اول استوری  
 سبزه گوی : بخبره ایران منظم می‌کند  
 کلینک : سوال و جواب

مرداد مرداد سوال با الگو بنویس  
 همواره می‌بینی که چه کاره ای است همان آن مجموعه را از آن بیسازد

از این :- آموزنده گان به کسانی می‌خواهیم آنها که در تخته های در کلاسشان  
 اوراق مقود از تخته های مقود ( از قبیل : مشاهده کار عملی ، سوال و جواب و ... )

صنفت اول

گفتگوهای از کتابها

به اشکال بالا دیده سوالهای زیر را مانند شکل من کرده و جدول بنویسید و در کلاس آن  
چندیت.

...الگوی جدول فوق را دیده به سوالهای زیر جدول جدول بنویسید.

- ۱- اگر ۲  به قاشقهای بالا زیاد شود حال چند قاشق خواهد بود؟
  - ۲- اگر ۳  به قاشقهای بالا زیاد شود حال چند قاشق خواهد بود؟
  - ۳- اگر ۴  به قاشقهای بالا زیاد شود حال چند قاشق خواهد بود؟
  - ۴- اگر ۵  به قاشقهای بالا زیاد شود حال چند قاشق خواهد بود؟
  - ۵- اگر ۶  به قاشقهای بالا زیاد شود حال چند قاشق خواهد بود؟
  - ۶- اگر ۷  به قاشقهای بالا زیاد شود حال چند قاشق خواهد بود؟
- نزدت: معلم باید در سوالات حل کرده جدول بر روی درخت بنویسد.

## تقرین

معظم سوالات ذیل را با آموزندگان مباحثه کنند .  
سوال اول : نماز شام سه رکعت فرضی و دو رکعت سنت است جمله چند رکعت میشود ؟  
بعد از کدام نماز خوانده می شود ؟ اگر در کجا خوانده شود ثوابش زیاد است ؟  
چطور باید خوانده شود ؟

سوال دوم : اگر در یک وقت دو رکعت نماز سنت و دو رکعت نماز فرضی خوانده شود جمله چند رکعت  
نماز میشود ؟ این نماز چه وقت خوانده میشود ؟

سوال سوم : نماز پنجگانه به ترتیب ( ۴ ، ۱۰ ، ۴ ، ۵ ، ۹ ) رکعات است .

بر کدام آن نماز چه وقت است ؟  
در کجا خوانده میشود ؟  
تعداد رکعات کدام نماز کم است ؟  
تعداد رکعات کدام نماز زیاد است ؟  
تعداد رکعات کدام نماز با اتم مساوی است ؟

سوال چهارم : اگر در یک شاخ درخت ( ۹ ) گنجشک نشسته باشند و ( ۸ ) گنجشک دیگر  
پهلویش بنشینند جمله چند گنجشک میشود ؟

سوال پنجم : اگر ( ۷ ) دانه آلبالو در شاخ و ( ۴ ) دانه آلبالو در شاخ دیگر درخت جمله چند دانه  
آلبالو میشود ؟

کتاب ماضد علی علم

تقدیم

این کتاب شامل سه نوع معلومات می باشد که عبارت اند از: معلومات پیشینداری  
معلومات طرز العمل و معلومات درسی

معلومات اولی آن گاه باشد که در صورت تدریس هر نوع موضوع باید سه نوع معلومات فوق را در نظر داشته باشد  
الف: معلومات پیشینداری که در دروس از معلومات ضروری برای مفهوم که در آن در نظر گرفته شده  
ب: معلومات در دروس

مفهوم: عملیات جمعها گانه اعداد اصل

موضوع: جمع

موضوع فرعی: جمع اعداد از (۰-۹)

موضوع دومی فرعی: در زشتن مفهوم جمع

موضوع دومی فرعی: خاصیت دومی جمع

موضوع فرعی: جمع تا صد و بیست و نه

اول: معلومات پیشینداری: در جمع کردن اعداد از (۰-۹) مفهومی که در آن در نظر گرفته شده

که آرزوی گانه معلومات پیشینداری در این دروس است

الف: حقایق در کتب خوانند که مفهوم جمع را بیایا کردن در تکرار (ت) می کنند

ب: آنها خاصیت دومی جمع را بیایا می کنند

ب: آنها خاصیت دومی جمع را بیایا می کنند

CONCEPT SCOPE & SEQUENCE: CLASSES 1-3  
2-IND 5 TAB SECTION - CONCEPT

۸ :- جهت و جهت با دقت متن موضوعات فوق معلوم از موارد همگرا در (حدیث)
   
 لوبیا - در جوداری ، سنگین و غده استفاده کنند
   
 ۹ :- آرد زنده در کوزه که کار آنها چطور بنام آید و عدد را به سیدر کنند
   
 ۱۰ :- آرد زنده که در حلقه اعداد که قبل از آنها آید و عدد آن در کوزه در کوزه
   
 می توانند در جمع اعداد استفاده کنند
   
 ۱۱ :- قورچین باید برانند و در جمع اعداد که در کوزه در کوزه در کوزه
   
 آرد زنده که در کوزه با عدد در کوزه کنند
   
 ۱۲ :- در کوزه آرد زنده که در کوزه با عدد در کوزه کنند
   
 عمل در کوزه ، استعمال اعداد و مساوی در جمع اعداد در کوزه
   
 ۱۳ :- معلوم که در کوزه آرد زنده که در کوزه با عدد در کوزه
   
 طریقه اعداد معلوم شود باید بود که آرد زنده که قبل از آن در کوزه
   
 « ۹ » و « مساویت » در مورد جمع با خود دارند
   
 معلوم از اعداد قبل از آن که استفاده کرده اید و در کوزه های زیری با آنها در کوزه
   
 الف اعداد در کوزه ها : = و +
   
 ب اعداد : جمع ، حاصل جمع ، اعدادی جمع ، ۹ نام معلوم جمع
   
 ی :- معلوم است که در کوزه گوی که در کوزه در کوزه ، اعداد جمع معلوم است
   
 در جدول الف ضمیمه این مآخذ مدغم آورده ، در جدول اول و در جدول دوم

یعنی ارزش صنوبر بالای درازگی می باشد تا نیم و تا نفع است

\*\*To be submitted to Dr. Boardman, Prof. Azimi for Approval and forwarding to ECA for their review, recommendations and approval.

**Activity Index:**

Quadrants	Segments	Summary of Activities
Q1-R-M	A	The teacher creates experiment to encourage the learners.
Q1-L-M	B	The teacher divides the classroom to groups in order to work together in activity.
Q2-R-M	C	Recognition of ones and tens by using concrete examples.
Q2-L-M	D	The teacher uses concrete question in order to teach adding numbers (0-50).
Q3-L-M	E	The learners solve aquired concept.
Q3-R-M	F	The learners add own experience dealing with adding numbers.
Q4-L-M	G	The questions are risen by the learners, is answered by the teacher and learners.
Q4-R-M	H	The learners apply addition operation in their daily life.

**Teaching Method -Strategy, Technique**

Quadrants	Segments	Method	Strategy	Technique
Q1-R-M	A	Discussion	Questioning	Manipulating
Q1-L-M	B	//	Group work	Practicing
Q2-R-M	C	Information	Questioning	Bridging
Q2-L-M	D	//	Physical model	Physical-model
Q3-L-M	E	Coaching	Exprimention	Questioning
Q3-R-M	F	//	Analyzing	//
Q4-L-M	G	Self-devel-opment	Combination	Questioning
Q4-R-M	H	//	Think-pair-shar	//

**Material Index:**

Quadrants	Segments	Materials
Q1-R-M	A	Leaves, pens, Pictures, Physical Models
Q1-L-M	B	Environmental materials, graveles-Pens, pictures.
Q2-R-M	C	Environmental materials wooden stick, leaves pen graveles picture.
Q2-L-M	D	Environmental materials graveles, bundles, sticks, physical models.
Q3-L-M	E	Environmental materials eraser, chalk, graveles, bages, etc.
Q3-R-M	F	Environmental materials eraser, chalk, graveles, bages, etc.
Q4-L-M	G	Environmental materials eraser, chalk, graveles, bages, etc.
Q4-R-M	H	Environmental materials eraser, chalk, graveles, bages, etc.

**Index of Strategies and Techniques of Evaluation:**

Quadrants	Segments	Evaluation
Q1-R-M	A	Have the Learners recognized ones and tens?
Q1-L-M	B	Can the learners connect bundels with numbers or not?
Q2-R-M	C	Have the learners recognized Ones and Tens or not?
Q2-L-M	D	The learners are evaluated whether they can add One digit number with two digits-without regrouping.
Q3-L-M	E	The teacher evaluates the learners by observation, quiz, questioning and answering.
Q3-R-M	F	The teachers must evaluate learners, by asking, questions and practical work.
Q4-L-M	G	The teacher evaluates learners activity and correct mistakes whenever is necessary is required.
Q4-R-M	H	The teachers evaluates whether the learners can apply addition of whole numbers in their daily life.

تنظیم کننده قبلی جهت رفتن لغات ریاضی درج

مسئله تنظیم کننده قبلی زنی بود بالای آن کلمه "فصلی لغت و محتویات آنرا که عبارت از ...  
 در اینجا کلمات با عدد ... و اعداد که از آن درج شده میشود ... با آموزنده گان ...  
 و مسلم با آموزنده گان کمک نماید تا آنها در حفظ کلمات و سنده های عددی جمع  
 کردن اعداد ریاضی با درستی و در درستی یکی بهار می رود و در ابط آنها باید یک  
 حاصل در است ؟

ترتیب کننده قبلی به آموزنده گان کمک نماید تا آنها یک ... و ...  
 و مسلم هر ... تنظیم کننده قبلی جدا جدا به آموزنده گان کمک کند و واضح نماید  
 مسلم آموزنده گان را کمک نماید تا آنها با استفاده از طوفان ریاضی (سند ...)  
 در مورد کلمات و اعداد و اصول ... فکر کنند  
 و سلم

اعداد یک متغیر از آن درج شده  
 نمود  
 ۰ ۱ ۲ ۳ ۴ ۵ ۶ ۷ ۸ ۹ -  
 ۷ - ۸ - ۹

اعداد یک متغیر  
 از آن استفاده کرد  
 = +  
 اشیای که متغیران  
 درج از افعال عام  
 تبدیل ... - چارت -  
 مواد ساده ...  
 کلمه - تب ...  
 یک ریاضی و در درستی  
 کلمات جدید که متغیران  
 در جمع استفاده نمود

آموزنده گان عاقل نورمه ۱۱ و ۱۲ نورست

مفسرین ریاضی صنف اول  
مفهوم عمیقاً همگان را درکی برتیب، عموزان، جمع، عموزان فرعی، جمع اعداد یکی از (۵-۱۵۰)  
ایچ سوم، چهارم، پنجم، ششم، هفتم، هشتم، نهم، دهم، یازدهم، و بیستم  
برابر آموزنده گان عاقل نورمه در این باره میگویند. منتهی به تجربه عملی پیشینه. بنگارید  
که آنرا انجام دهند. جواب به سوال: (این جملها را بنویسند) نقش معلم را افسانای ویا  
فرد هم آواز میگویند. میزد مورد استعمال: فراموش آدرش میباشند. از خود چیز میگویند  
تا اگر این بیشتر فال اند.

ایچ سوم - مورد است

نتیجه مطلب: از مزین گان باید مفهوم جمع اعداد یکی از (۵-۱۵۰) بدون حاصل  
را که نشان و تفریح نمودن از تفریح و هیئت معنی درک کرده و در راه علم با آن قدرت  
نموده ای که خود را با همین سوال با و در دست ماست.

مناجرت: آموزنده گان متوجه شدند که معلم در حالات جمع اعداد باید درستی و دودستی بدون حلال و حلال  
و در نهاده عمل نمایند. مشورتی یکی از تفریح کننده گان باقی بر تفریح معنوی خود چنانچه معلوم می شود.  
① و اگر نشان بالان گفته ۳۰ + ۳۰ را بنویسند و هر دو عدد را در یک خط و در یک خط و در یک خط و در یک خط  
و کلام با کلام جمع میشوند و تفریح نماید. ② نمودن از همین سوال برین طریق نوشته شود که  
در حاصل جمع کلام تغییر می نماید و یا هر چه معلم میگویند یا آموزنده گان که نماید یا که نشان بالان از همین حالات  
مانند حلال و حلالین من نماید. و نمودن ۳۰ + ۳۰ را با اولی گفته نوشته شود که یکی از تفریح کننده گان نشان  
ورد و در خط گفته جدید آن را بنویسند و من معلوم در با آن. قوتها حفظ و در تباط دهد  
در حالات با تفریح کننده گان که بنامند نشان با تفریح و تفریح آموزنده گان که من می شود.

متوجه گان فن تدریس استراتژی ما در کتاب ما: مقدود: فراگام از روی سبب آموزنده گان  
که تفریح میگی: تحصیل و تفریح  
تکلیف از سوال کردن

مورد مورد استعمال یا ایجاب شده امرار ساده جمعی مانند: تخمه سیاه  
چوبدرنا - برآی - حنظل و غیره

از زبان: مسلم باید تفریح ساده بود و جوهریت شاعرانگی آموزنده گان  
از زبان: نماید.

آموزنده گان پسر تلاش نورس در نورست

مضمون: ریاضی صنف اول  
موضوع: یکسان سازی اعداد (کلی) بر مبنای مجموع اعداد (کلی) از (0-50)  
بجای 40؛ بصورت عینی در مسئله از طریق تجزیه عمل را متعادل بنمایند. در این جا که  
بر اساس آموزنده گان پسر تلاش، مثال به انجام یک عمل یا یک چیز در تدریس مفید را بخود تدریس با دیگران  
در میان میگذارد. سوالات را جواب میدهد. مفیدم چنانچه میتواند و یا از این مفیدم  
جهت ختم نشود بهتر است. نقل معلم: از برای کسب و یا راههای گسسته. میتواند در وقت فراغ  
مفیدم را آموزش بکند. مفیدت جدید و کجاست؟ کجاست؟ اول تدریس در آموزش آینه باشد. در وقت و جواب را  
انجام میکنند تا گردان بیشتر خالی اند

ربیع چهارم - مرد چپ

نویسنده مطلب: آموزنده گان کمال الهادی که را جمع به جمع خود ساختند آنرا  
از خود ساختند و آنرا بخود منتقل کردند که آنها جمع اعداد یک رقمی را در کجای  
دور دوری را با دور دوری آن موقع را بنویسند؟

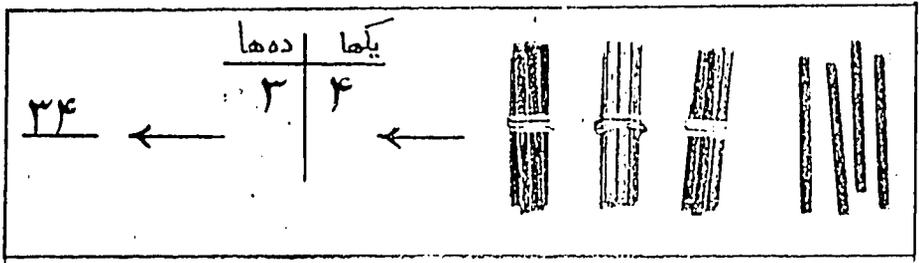

نمایرت: بر اساس اینکه در بعضی آموزنده گان آمده است که آنرا ترکیب و به وسیله جدول اولی که میتوان  
مشکل: 1- اولی که در جدول معلوم میگردد که (14) در آن سید بود است و (11) در آن کما است و در جدول  
علاوه بر این در جدول 2-  
که به روشی که در جدول معلوم کردی و یکی و اعداد آنرا عمل نماید. به همین ترتیب  
آموزنده گان نیز در جدول معلوم کرد که در آن کما بود و یکی عمل نماید. به همین ترتیب که در جدول معلوم  
کرد (11) را مانده است که با جدول معلوم کرد که در آن کما بود و یکی عمل نماید.  
علم 3- که با جدول معلوم کرد که در آن کما بود و یکی عمل نماید.

مشورهای فن تدریس: استرانی با و تکلیف ما؛ ملتود در رنگش ف جدولی  
کستور سبجی: مستور کعب  
تکلیف: سواد و جدولی

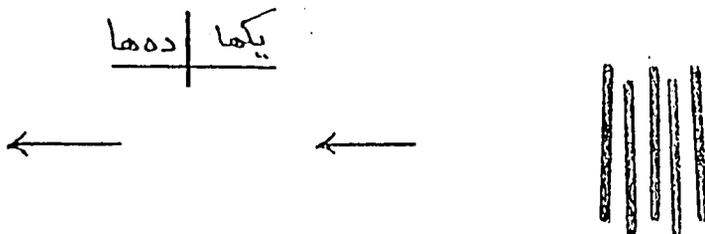

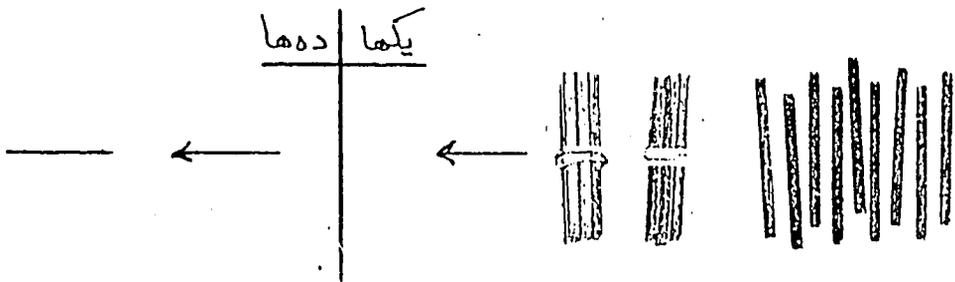

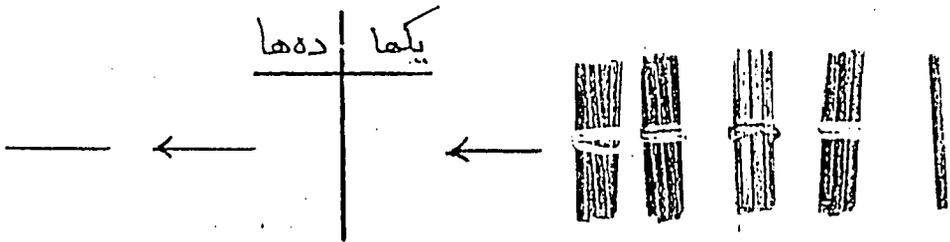

سواد مورد اشتغال یا ایجاز شدن: سواران در جمعی: کشته به ستم که جویدها  
تمامی: سواد

از برای مسلم فعالیت: آیا آموزنده گان را به روشی کردن معادلی نماید و در  
وقت لزوم اصلاح نماید.

سوال های ذیل را حل نمایید .

۱- عبدالرشید به بازار رفت (۲۴) فغانی را یکدانه قلم پنبلی و (۱۵) فغانی را یکدانه پنبلی پاک خرید بگوید که عبدالرشید چند افغانی داشته ؟

۲- نماز پیشین چند رکعت است ؟ نماز شام چند رکعت است ؟  
مجموع آنها چند رکعت نماز میشود ؟

۳- محمد ادریس (۵۳) فغانی یکدانه مسواک و (۴۰) فغانی را یکدانه شانه خرید بگوید که محمد ادریس چند افغانی را مصرف کرده است ؟

۴- برای محمد یونس (۳۱) دانه چار مغز پدرش و (۲۷) دانه چار مغز گایش داد بگوید که حالا محمد یونس چند دانه چار مغز دارد ؟

۵- شاگردان خود شان یک یک سوال جمع را ترتیب نموده حل نمایند .

۶- به هر یک از سوال های ذیل یک قلمه بسازید .

$$\begin{array}{r} ۱۶ \\ + ۲ \\ \hline \end{array}$$

$$\begin{array}{r} ۴۰ \\ + ۱۰ \\ \hline \end{array}$$

$$\begin{array}{r} ۳۱ \\ + ۱۲ \\ \hline \end{array}$$

$$\begin{array}{r} ۲۵ \\ + ۳۴ \\ \hline \end{array}$$

مقدمه :-

این کتاب شامل سه نوع معلومات میباشد که عبارت از

۱- معلومات پیشنهادی

۲- معلومات طرز العملی

۳- معلومات سرلی

مسلمان گرامی آگاه باشد که در وقت تدوین هر نوع موضوع باید معلومات سه گانه فوق را در نظر داشته باشد.

اکنون میخواهیم برای مسلمان محترم در مورد سه نوع معلومات فوق ابرار مستفاد که ذیلاً گفته شده است  
اراء بنماییم .

مفهوم :- عمدهات چهار گانه اعداد کل

موضوع :- جمع

موضوع فرعی :- جمع اعداد کل از (صفر - ۵۰) بدون حاصل

I : معلومات پیشنهادی :-

مسلمان گرامی آگاه باشد که آموزنده گان معلومات پیشنهادی زین  $\varphi$  در مورد

مفهوم از متن  $\varphi$  سره بیاموزند .

الف :- حقایق را کشف نماید که نگارنده در  $\varphi$  توسط اشیای جمعی و تبدل کتاب در

نمونه تشکیل نماید .

ب: - آنها جمع اعداد یک رقمی با دورقمی و دورقمی را با دورقمی بدون حاصل را  
فهمیده و درک نمایند.

ج: - جهت وضاحت موضوعات فوق مسلم از مواد محلی است ده «چوبکها - قلم - سنگین  
بندل و غیره» استفاده کنند.

د: - آموزنده گان درک کنند که آنها چگونه بین بندل های شش و یکها و ده  
را بطریقه ای نام نمایند.

ه: - آموزنده گان حقایق اعداد که مقدمات آنها آموخته اند به بحث در کلاس قلمی متراکنند در جمع  
اعداد یک رقمی و دورقمی استفاده کنند.

و: - قور عدد جمع را باید بدانند مشوره در جمع کردن اعداد یک رقمی با دورقمی و دورقمی با دورقمی  
گرد که یکها را با یکها فزوده را با ده جمع کنند.

ز: - معیارها:

آموزنده گان صحیح خواندن، صحیح نوشتن، مجدداً جمع در استعمال یکها و ده بصورت  
صحیح بدانند.

ح: - مسلم گوشش نمایند تا آموزنده گان رابطه جمع را با خود بخون و مضامین دیگر  
شده در بخون ساین یکیشان چند انگشت دارد و یاد در نباتات یک درخت چند شاخه دارد  
در تباط دارد بتوانند.

ط: - لغات ریاضی: - مسلم تصور بسا که آموزنده گان کلیات یکها و دهها در مورد جمع  
در درسهای قبلی آموخته اند از آن استفاده نمودن در جمع کردن اعداد استفاده نمایند.

ی: - معلومات پیشینهای جوهری لولای می جدولی است که علمیه این مافیه میباشد  
مسلم صحیح با آن وقت نموده آنها را مطالعه کنند.

## II :- معلومات طرز الفحلی :-

هدف از این معلومات بر سر مضموع رتنتاب سده رتنتاب که معلوم است پیمانه‌های فوق را که در مورد جمع رتنتاب نمودیم، چطور آن را عملی‌تر کنیم. بر این منظور مسلم به نکات زیر متوجه نمائید تا آموخته‌ها گان آن طراز العمل را در جمع کردن اعداد کل از (هفت - ۵۰) بدون حاصل اجرا کرده بتوانند.

الف :- پیمانه‌ها :-

در مدارس و مکاتب ما جمع را بصورت یک پیمان قبول سده از در آن به چپ لا اول یکها با یکها و بعد از آن با ده ... جمع بیشتر در شده  $13 +$  قبول نموده رند. ستاد آن میتوانند سوال های جمع فوق را از چپ به راست «اول ده با ده» جمع نموده حاصل آنرا از ذهن نگهدارند میشود و حاصل آنرا با یکها جمع میشود «نیز جمع نمائید بخاطر آنکه در حاصل جمع کدریم تغییر رخ نمایی ده».

ب :- معیارها :-

آموخته‌ها گان باید سوله‌های جمع مانند  $27 + 31 = 58$  یا  $27 + 31 = 58$  قسم واقعی و ستونی جمع نموده بتوانند.

## ج :- مهارت‌ها :-

آموخته‌ها گان باید مهارت‌های خردت - بستن - درک کردن - تطبیق کردن - تمییز کردن - ترکیب نمودن و ارزیابی کردن را در جمع اعداد دیکر واقعی با یکدیگر و در درستی با درستی جمع کرده بیاموزند.

د :- گرایش و تسلسل ها :-

در تسلیم و تربیه نفسی مادران بر وجود نیاید و مسلمان گرامی تنها از نمودار جمعیت ده از  
تسلیم « چوبکها - سنگین - بیدار و غیره » استغاده نماید .

لکن در ممالک بیگانه عمده از موضوعات « اشیای جمعیتی » اسباب آلات  
بیگانه مانده مابین حساب رگسیون و غیره میباشد .

بنابراین مسلمان که شش نماید که آموزنده گان در استغاده از سخن جمع -  
یک رقی و دورقی در حیات روزمره تسوین و رهنمایی کنند .

III :- معلومات بشرطی :-

درین قسمت مسلم صاحب سعی نماید تا به آموزنده گان تفهیم نماید که مسلمانان پیشینها را  
و طراز الهی که در جمع اعداد یک رقی و دورقی از ( صفر - ۱۰ ) یاد گرفته اند  
لا حظور ، در یک ، چه وقت « در حیات روزمره شان میتوانند از  
آنها استغاده نمایند . شد

دعا کجا :- آموزنده گان میتوانند جمع اعداد یک رقی و دورقی را در دروس  
خانم ، مسجد و بازار و غیره در خرید و فروش اشیای بکار برند .  
چه وقت :- در وقت ضرورت میتوانند از جمع استغاده کنند .  
چطور :- مطابق ضرورت قسمیکه لازم است استغاده نمایند .

و من الله توفیق

OVERVIEW: 4 MAT Form O

Subject: Science Grade Level: One

Concept: 6 Land Topic: 6.1 Land Forms

Overview Contents:

Aim, Goal, Outcome:

Learners will be able to identify and define the land forms. They will learn its use and benefits.

Brief Objective Index:

Q.1-RM:

Teacher connects learners prior knowledge regarding; mountains, hills, plains and deserts to their new experience.

Q.1-LM:

Teacher helps the learners to analyze and reflect on their experiences regarding the forms of land as mountains, hills, plains and deserts.

Q.2-RM:

Teacher helps the students to integrate and organize their knowledge in reference to land forms.

Q.2-LM:

Learners develop concept skills to identify, compare, contrast and define the forms of the land and its use.

Q.3-LM:

Learners will be able to practice and make models of the land form.

Q.3-RM:

Learners understand that land forms can be used as pasture, mine deposits and forests and resorts for some animals.

Q.4-LM:

Learners understand the importance of the land forms in their daily life and evaluate its advantages.

Q.4-RM:

Learners will integrate and apply their new knowledge concerning the land forms at home, village, city and province.

Activities Index:

Q.1-RM:

1. A short story about land
2. Hanging a chart in reference to land forms on the chalk board.

3. Learners think about it.
4. Teacher ask the following questions.
  - What is the mountain form in this chart?
  - What is the hill form in this chart?
  - What is the desert form in this chart?
5. How many of you know the mountain?
6. Who has visited the mountain?
7. What is the difference between the mountain and the hill?
8. What you have learned so far about mountains, hills, plains and desert?

Q.1-LM:

1. Teacher divide the whole class to groups.
2. Teacher telle each group: Think about land and discuss its forme.
3. After several minutes teacher asks about land forms.
4. When students discuss and analyze the forms of the land. teachers introduces the concept of the land.

Q.2-RM:

1. Teacher for the completion of students information, take them to the field trip.
2. Teacher deliver information to the students about the mountains, hills, plains and desert.
3. When they return, teacher write students information on the blackboard.
4. If possible. students with the help of the teacher make the models of the mountains, hills, plains and desert in the class-room.

Q.2-LM:

1. A short story
2. Hanging prepared chart on the blackboard.
3. Students contrast and compare the figures on the chart and think about it.
4. Students are divided into different groups.
5. Each group think, share and pair their experiences.
6. Each group reflect on the present information.
7. Teacher reads student's text.
8. Teachers take students to the field trip.
9. Students obtain information about the forms and structure of the mountains, hills, plains and desert.
10. Students tryout about the concept.
11. After practice add some information about the concept, teacher writes down students' reflective observation.
12. Students learn about the use and advantages of the concept.
13. Students apply evaluate and integrate the information in their real life regarding the concept.

Q.3-LM:

1. Teacher makes several groups.
2. In advance teacher prepares some samples of the concept and related topics.
3. Students with the help of the teacher make models of the mountain, hills, plains and desert.
4. Speaker of the each group explains to the classroom about their models.

Q.3-RM:

1. Each group tells the students that how mountains' rocks are used for the buildings.
2. Each group tells the students that there are various plants, mines, forests and animals in the mountains.
3. Each group explains that hills are made of soil and sand and contains pastures, trees etc.
4. Hills are used for dry farming.
5. Each group explains that deserts and plains are made of sand and soil too, and plains are suitable for agriculture, gardens and parks.

6. Each group tells the students that deserts can come under cultivation which has economical importance.

Q.4-LM:

1. Teacher helps the students to discuss in groups and in general the benefits and use of the land forms.
2. Teacher divides the blackboard into 4 parts.
3. Under the each segment of the blackboard write the name of mountain, hill, plain and desert.
4. Teacher gets the information regarding the usefulness, economical importance under each column.
5. Teacher tries the participation of all students in this question - answering session.

Q.4-RM:

1. Students make 4 groups.
2. Each group is assigned to discuss the ways to take benefits of mountains, hills, plains and desert.
3. Each group explains their outcome to the rest of the classroom.
4. Students collectively discuss, understand and learn the economical importance, usefulness and advantages of the above mentioned concept at their home, village, country and province.

Pedagogical Methods, Strategies, Techniques Index

Q.1-RM:

1. Use of K-W-L strategy
2. Showing chart
3. TPS strategy
4. Question and answer strategy

Q.1-LM:

1. Group work
2. Discussion
3. TPS Strategy

Q.2-RM:

1. Questions and answers
2. Field trip
3. Discussion

Q.2-LM:

1. K-W-L strategy
2. TPS Strategy
3. Field trip.
4. Brain storming
5. Mini lecture
6. Showing chart
7. Group work
8. Practice
9. Questions and answers

Q.3-LM:

1. Practical work
2. Questions and answers
3. Discussion

4. Explanation

Q.3-RM:

1. Discussion
2. TPS Strategy
3. Explanation

Q.4-LM:

1. Group work
2. TPS Strategy

Q.4-RM:

1. Group work
2. Questions and answers
3. Explanation
4. Discussion

Materials Index:

Q.1-RM:

1. Chalk board
2. Chalk
3. Eraser
4. Chart

Q.1-LM:

1. Chalk board
2. Chalk
3. Eraser
4. Students' text

Q.2-RM:

1. Soil
2. Sand
3. Rocks

Q.2-LM:

1. Students' text
2. Chalk board
3. Chalk
4. Eraser
5. Chart
6. Rocks
7. Soil
8. Sand

Q.3-LM:

1. Chalk board
2. Chalk
3. Eraser
4. Sand
5. Rocks
6. Soil

Q.3-RM:

1. Charts

Q.4-LM:

1. Chalk board
2. Chalk
3. Eraser
4. Students' text
5. Sand
6. Soil
7. Rocks

Q.4-RM:

1. Pencil
2. Paper
3. Chalk board
4. Chalk
5. Eraser
6. Students' text

Evaluation & Assessment Strategies and Techniques Index:

Q.1-RM:

1. When students answer, they are evaluated.

Q.1-LM:

1. When students discuss and answer the question, they are assessed.

Q.2-RM:

1. During field trip teacher evaluate students observation and their answers and questions.

Q.2-LM:

1. During chart discussion
2. Questions and answers

Q.3-LM:

1. When students make models and practice their experience.
2. Questions and answers
3. Explanation

Q.3-RM:

1. Evaluate students discussion
2. Questions and answers
3. Explanation

Q.4-LM:

1. Questions and answers
2. Discussion

Q.4-RM:

1. Explanation
2. Discussion
3. Questions and answers

Subject: Science Grade Level: One

Concept: 6 Land Topic: 6.4 Soil (Kinds)

Overview Contents:

Aim, Goal, Outcome:

Learners will be able to identify, classify and define kinds of soils, their physical composition, color, softness, roughness and luster. Learners will understand soils better use and advantages of soils.

Brief Objectives Index:

Q.1:

Learners learn the names of soils and their kinds. They identify their physical composition, color, softness, roughness and luster.

Q.2:

Learners will explain, what are the suitable soils for agriculture. They will categorize, define and ways of their protection.

Q.3:

Learners will understand the characteristics and properties of different kinds of soils. They will learn about humus and saline soils.

Q.4:

Learners will learn the usefulness of soils, the use of chemical and animal fertilizers for poor soils and its advantages for the family, village, county and society.

Activities Index:

Q.1

Learners connect their prior knowledge to their new experience. Brain storming, hanging chart, showing different kinds of soils, supervision and guidance of learners by the teacher, questioning and answering, individual and group discussion, field trip, bringing various samples of soils to the classroom by the students, writing the names of the soils on the blackboard.

Q.2

Drawing five column table on the blackboard and writing the names of the five kinds of soil in each column, characteristics of soils, arranging and reflection on the learners information. Identifying and defining, naming, describing each kind of soil by the students reading, students' textbook, practicing and adding some thing to their defined givens, usefulness and ways of soil use. Application and the use of soil for different kinds of plants.

Q.3:

Examining and using other samples of soil and extending suitable guidance to the learners, writing the main characteristics of soils on the blackboard, demonstrating two experiments about soil and erosion. For further examination students bring in to the classroom humus and saline soil for individual and group practice.

Q.4:

In making soil suitable for agriculture for obtaining good profit from the soil, its use for different purposes. What kinds of soils are used for plantation, its fertility and protection.

**Pedagogical Methods, Strategies, Techniques Index:**

Q.1:

Brain storming, I-W-L, TPS strategies, discussion, observation.

Q.2:

Discussion, cooperation and reflecting on an experience.

Q.3:

Individual and group working technique, practice, TPS strategy and discussion.

Q.4:

Questioning and answering method, TPS.

**Materials Index:**

Q.1:

Chart of soils, soil samples, blackboard, eraser, chalk.

Q.2:

Water, plates, Iron Wool, Various large mouth bottles, sieve, students' text, spoon.

Q.3:

Normal soils samples and samples of saline and humus soils.

Q.4:

Blackboard, chalk and eraser.

**Evaluation & Assessment Strategies and Techniques Index:**

Q.1:

When students use TPS strategy and during field trip, when they bring in soil samples, observation, naming soils.

Q.2:

When students identify soils characteristics, discussion, examining and practicing soil physical composition.

Q.3:

When students examine different kinds of soils, during class debate on other samples of soil and their names.

Q.4:

When they performing TPS strategy.

## النواع خاک

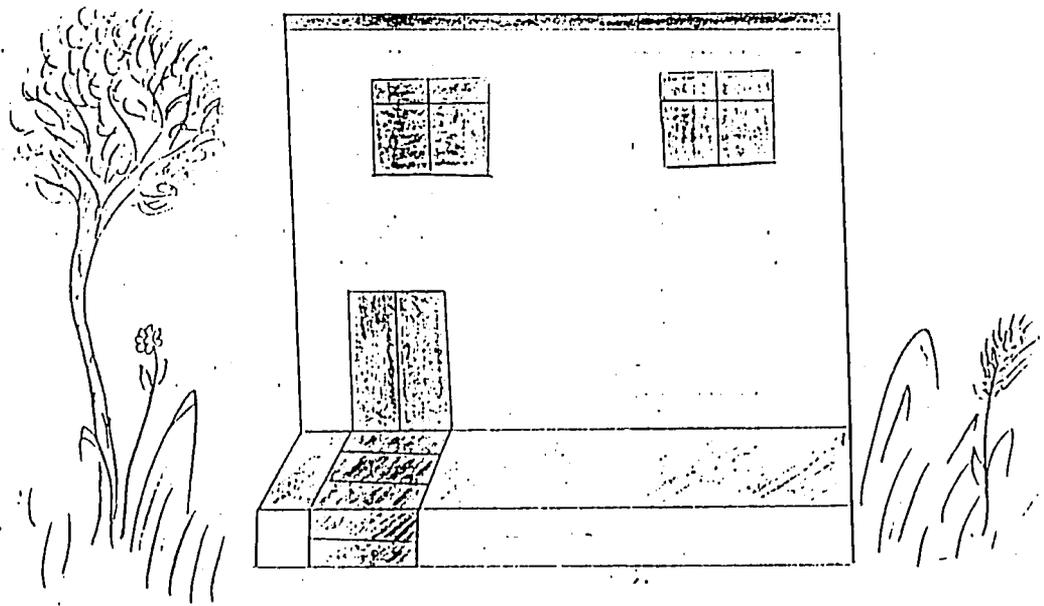

حظه زیاد خشکه ما توسط خاک پوشیده شده است .

خاکها انواع زیاد دارد .

خاکها دارای رنگ ، جلا ، نرمی و درشتی مختلف می باشد .  
 سه نوع خاک وجود دارد خاک ریگی ، خاک زرد و خاک سیاه .

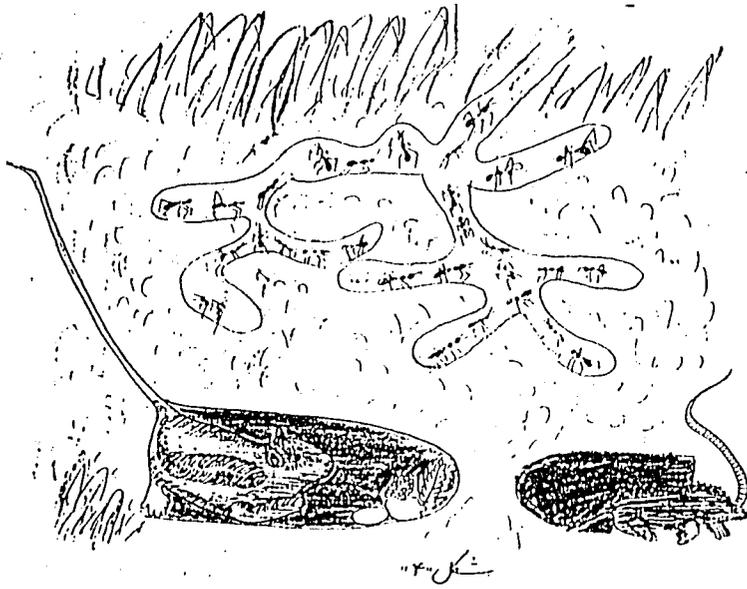

در خاکها حیوانات مرده وجود دارد  
در خاکها نباتات فرسوده دیده میشود  
در خاکها آب و هوا دیده میشود

انسانها خاکها را برای ساختن خانه استعمال میکنند.

انسانها خاکها را برای کشت و زراعت استعمال میکنند.

- حیوانات و نباتات به خاک ضرورت دارند .
- حیوانات در بین خاکها خانه های زیرزمینی میسازند .
- حیوانات بعضی اشیاء را در زیر زمین گور میکند .
