Directory of Services

*A Guide to the Global Environment Center's
People, Programs, Projects and Partners*

February 1999

U S Agency for International Development
Bureau for Global Programs, Field Support and Research
Global Environment Center
Washington, DC 20523-3800

U S AGENCY FOR
INTERNATIONAL
DEVELOPMENT

Letter from the Deputy Assistant Administrator

It is a distinct pleasure for me to present the U S Agency for International Development (USAID) Global Environment Center *Directory of Services*. Since our inception in 1994, the Center has successfully implemented programs that protect the environment and foster sustainable development worldwide.

To further our efforts, this directory has been compiled to better assist USAID field staff in understanding and accessing the contracting mechanisms and technical services currently in the Global Environment Center's portfolio. It provides a comprehensive overview of each Office within the Center, detailed information on the Offices' technical support services and contact information.

The directory is an evolving document — one we will improve on as we identify ways to increase its utility — and we encourage your comments and questions. Updates, questions and comments should be directed to the Global Environment Center's Communications Manager at genv@genv.org.

Sincerely,

A handwritten signature in black ink, appearing to read "D. Hales", is written over the word "Sincerely,".

David F. Hales
Deputy Assistant Administrator
Global Environment Center

Part I: Contact Information

Global Environment Center (G/ENV)

The Global Environment Center (G/ENV) — located in the US Agency for International Development (USAID) Bureau for Global Programs, Field Support and Research — coordinates the Agency’s environmental programs. The Center provides technical and programmatic leadership and support to the Agency, its field Missions and its domestic and international development programs on sustainable natural resources, urbanization and energy systems as well as on the Agency’s commitment to combating global climate change and biodiversity loss. The Center has three offices: Environment and Natural Resources (G/ENV/ENR), Environment and Urban Programs (G/ENV/UP), and Energy, Environment and Technology (G/ENV/EET). It also houses the Global Bureau’s engineers who have special expertise in environmental regulations.

Mailing Address

USAID/G/ENV
RRB, Room 3 08
Washington, DC 20523-3800

Location

The Global Environment Center and its three offices are located on the third floor of the Ronald Reagan Building, 1300 Pennsylvania Avenue, NW, in Room 3 08.

Visitor/Courier Entrance

The visitor’s entrance to USAID is located on 14th Street, NW, across from the U S Department of Commerce.

Fax Number

(202) 216-3174

Barbara Adams <i>Secretary</i>	3 08-093	(202) 712-1451	badams@usaid.gov

Regional Coordinators

Field support is a top priority of the Global Environment Center. Regional Coordinators represent the Center in relations with field Missions and their regional Bureaus. As such, they are responsible for ensuring the Center provides field support to Missions and regional leadership on the Agency’s global environmental issues and special initiatives. To support these responsibilities, the Coordinators develop and maintain strong links with the field, assist in personnel and training actions for environmental officers and provide tracking and reporting of field environmental activity and capability.

Policy and International Organizations

The Center's policy staff supports USAID Missions, regional Bureaus and cooperating countries in analyzing, formulating and implementing environmental and economic policies that promote environmentally sustainable development. The staff provides analyses, training and related technical services to assist USAID organizations, developing country policy makers and those who support them in better understanding how policies affect the environment and the country's development processes.

As part of its mandate, the Center also provides strong support for United States Government foreign policy initiatives. Center staff participate in various U.S. delegations, providing technical assistance on best practices in the environment, furnishing background documentation and analyses, facilitating participation of nongovernmental organizations and private sector institutions, and disseminating information.

The Center participates in the following international forums:

- Asia Pacific Economic Cooperation (APEC) fora
- Convention on Trade in Endangered and Threatened Species (CITES)
- Intergovernmental Panel on Forests
- Plant Genetic Resources
- U.S.-Egyptian Partnership for Economic Growth and Development
- U.S.-South Africa Binational Commission
- UN Commission on Biological Diversity (CBD) and associated fora
- UN Commission on Human Settlements (UNCHS)
- UN Commission on Sustainable Development (CSD)
- UN Commission on Human Settlements (Habitat)
- UN Convention to Combat Desertification (CCD)
- UN Environment Programme (UNEP)
- UN Framework Convention on Climate Change (FCCC)
- UN General Assembly Ad Hoc Committee on Financing for Development
- UN Intergovernmental Panel on Forests
- World Conservation Union (International Union for the Conservation of Nature)

Exhibit 1 Global Environment Center Organizational Structure

The Global Environment Center's organizational structure is shown in Exhibit 1 below. Each office's organizational structure is detailed in the exhibits found in the sections that follow describing each individual office.

Office of Environment and Natural Resources (G/ENV/ENR)

The Office of Environment and Natural Resources (G/ENV/ENR) seeks to strengthen conservation and management of biodiversity, promote the sustainable management of natural and managed forests, support the increased and improved use of environmental education and communication strategies, methods and tools, encourage the increased conservation and sustainable use of freshwater and coastal resources, and promote sustainable management of natural resources in agricultural production systems in key countries

Office of Environment and Urban Programs (G/ENV/UP)

The Office of Environment and Urban Programs (G/ENV/UP) promotes the effective growth of cities and towns in developing countries by providing assistance in developing more effective municipal governance, waste management, urban and industrial pollution prevention, and locally based financing for housing and infrastructure. The Office focuses on three primary issues: the financing of urban environmental services and shelter, especially for women and children in low-income communities, improved urban management, and reduced urban and industrial pollution.

Office of Energy, Environment and Technology (G/ENV/EET)

The Center's Office of Energy, Environment and Technology (G/ENV/EET) helps developing countries increase environmentally sound energy production in order to achieve and maintain social and economic progress and counter the growing threats of global climate change, acid rain and urban air pollution. The Office's sustainable energy efforts address energy efficiency, renewable energy and clean power development through technological innovation, training and capacity building. The Office taps U.S. expertise to promote private sector initiatives in developing countries and encourages adoption of more effective energy policies and regulatory frameworks to stimulate trade and investment in environmentally sound energy technologies.

Part II: Information Resources

Environment Information Clearinghouse

USAID's Environment Information Clearinghouse (EIC) provides information services to the Agency's environment staff. The EIC reports on USAID country, regional and global environmental activities, conducts technical research, analyses and information dissemination, develops and manages the Agency's environment Web sites, both public and internal, and provides presentation and communications support for Agency environment staff. EIC products include reports on USAID environment activities for internal and external audiences, databases of USAID environment budgets, activities and personnel, and a full range of publications, including multimedia presentations, briefing packets, outreach materials and brochures. To obtain information on the Global Environment Center's objectives, activities and support mechanisms, contact the EIC at

EIC/Director
1025 Thomas Jefferson Street, NW
Suite 170
Washington, DC 20007

Telephone (202) 944-2507
Fax (202) 944-2352
E-mail jmkramer@genv.org

Internet

Public information on USAID's environment programs can be found on the Internet at

<http://www.info.usaid.gov/environment>

USAID-authorized users of the Agency's intranet can access the Global Environment Center website at

<http://www.genv.org/genv/gec.htm>

Publications

Copies of USAID publications, including information on the Global Environment Center's programs, can be obtained through the Center for Development Information and Evaluation (CDIE) at

PPC/CDIE/DEC

USAID Library

The USAID library offers a variety of information resources and services to USAID staff and contractors. A limited number of library services are also available to the general public. The library contains more than 100,000 USAID project and technical documents in microfiche format, including major USAID program and financial documents, non-USAID international development materials, including thousands of World Bank documents in microfiche format, more than 9,000 commercially available titles, a reference collection containing statistical sources and directories, more than 400 journals and newsletters, and 10 major daily newspapers. The library also has access to commercial databases and the World Bank internal documents database. The library can be contacted at

Part III: Services Overview

Global Environment Center

The Challenge

Sustainable development depends on careful stewardship of the environment. Poorly managed urbanization, unsustainable energy use, deforestation, water pollution, soil erosion, biodiversity loss and other forms of environmental mismanagement result in increased poverty, social instability, disease and conflicts over resources. These consequences threaten the US's economic and national security interests and the physical, economic and social well-being of people throughout the world. They also result in millions of preventable deaths each year and undercut economic opportunity worldwide.

The Response

Consequently, the wise management of environmental and natural resources is a major focus of USAID's assistance efforts. USAID works to reduce long-term threats to the global environment, particularly loss of biological diversity and climate change, and to promote sustainable economic growth locally, regionally and nationally. USAID pursues these goals by working with host countries, nongovernmental organizations, private sector groups, other US government agencies, international organizations and other donor countries.

The Global Environment Center — located in USAID's Bureau for Global Programs, Field Support and Research — coordinates the Agency's environmental programs. The Center provides technical and programmatic leadership and support to the Agency, its field Missions, and its domestic and international development programs on sustainable natural resources, cities and energy systems as well as on the Agency's commitment to combating global climate change and biodiversity loss.

Support Mechanisms

Environmental Policy

Environmental Policy and Institutional Strengthening Indefinite Quantity Contract (EPIQ)

Description of Services This Indefinite Quantity Contract was established to develop and implement environmentally sound strategic planning and to strengthen environmental policies and institutions. Short-, medium- and long-term advisory services and technical assistance in the areas of environmental

policy and institutional strengthening can be provided quickly to promote environment programs and reduce long-term threats to the global environment. Activity areas include environmental sector assessment and strategic planning, policy analysis and implementation of policy-related programs and activities, development of performance monitoring systems, information management and dissemination, research, surveys, inventory and special studies, institutional development, support for international forums, and commodity procurement and grants management.

Environmental Planning and Management Project Cooperative Agreement

Description of Services This project has three purposes strengthening the capabilities of developing country institutions, both public and private, developing and carrying out environmental and natural resource management policies, strategies and plans, and incorporating sound environmental and natural resource management policies and strategies in national- and local- level planning. Services include technical support and advisory services to governments, nongovernmental organizations and international donors, information dissemination about state-of-the-art environmental planning methods, communications focusing on practical approaches through publications, technical advice for regional environmental coordination organizations, and support for applied policy research.

Office of Environment and Natural Resources

The Challenge	The natural resources that support life on this planet are being degraded, depleted and inefficiently used. Uncontrolled deforestation, massive soil erosion, increasing water scarcity, deteriorating water quality, the polluting and overdevelopment of coastal and aquatic ecosystems and the loss of genetic resources threaten long-term sustainable development.
The Response	By promoting the sustainable management of natural resources, the Office of Environment and Natural Resources provides the foundation for sustainable national economic growth. The Office works closely with host-country and U.S. government agencies, nongovernmental organizations, United Nations organizations, multilateral development banks, universities, USAID Missions and Bureaus and resource users. Its programs focus on strengthening local community groups and nongovernmental organizations and supporting policies that help them take responsibility for improving natural resource management. These programs focus particularly on communities and local environmental nongovernmental organizations in areas rarely served by traditional development activities.
Support Services	<p>The Office's approach to improving natural resources management in developing countries includes the following:</p> <ul style="list-style-type: none">■ Biodiversity Improved conservation and management of biological diversity results from enhancing the management of significant biodiversity sites, improving policies that affect biodiversity, strengthening individual and institutional capacity, increasing public awareness, identifying biodiversity conservation priorities and developing sustainable financing mechanisms for biodiversity conservation.■ Forestry Forest management is improved through developing, demonstrating and disseminating sustainable forest management policies and practices, improving local management capabilities, enhancing devolution of authority to communities to manage forest resources and facilitate local participation, and integrating assessment and monitoring systems for improving forest health, biodiversity conservation and carbon sequestration.■ Environmental Education and Communication Public support and action for environmental programs and policies is increased through targeted education and communication programs. Strengthening the capacity of national- and local-level agencies, organizations and community-level groups in the design and delivery of these programs is critical to ensuring popular support and needed changes in behaviors, practices and attitudes relating to environmental concerns.■ Freshwater and Coastal Resources Increased conservation and sustainable use of freshwater and coastal resources results from improved governance of coastal ecosystems, strengthened conservation and management of living aquatic resources and integrated management of water resources across economic sectors.■ Environment and Sustainable Agriculture Sustainable management of natural resources in agricultural production results from promoting commercially and environmentally sound policies and investments, supporting initiatives in

community-based natural resource management that sustainably raise incomes and are environmentally sound, and sharing best practices and technologies

Environment

Central African Regional Program for the Environment Cooperative Agreement

Description of Services The Central African Regional Program for the Environment (CARPE) is a regional conservation program focused on the vast, moist tropical forests in the Congo Basin. CARPE aims at helping reduce the rate of deforestation and loss of biodiversity in six countries of the Basin — Cameroon, the Central African Republic, the Congo, the Democratic Republic of the Congo (formerly Zaire), Equatorial Guinea and Gabon — by preparing the groundwork for possible future conservation efforts on a large scale. CARPE is based in USAID's Africa Bureau, but cooperative agreements for its implementation are channeled through the Global Environment Center.

Global Program to Preserve Biodiversity Cooperative Agreement (Leader with Associates)

Program Description This Leader with Associates (LWA) cooperative agreement is a new mechanism designed to allow additional flexibility to facilitate the participation of USAID overseas Missions and Bureaus can participate in this agreement using two methods. The first method is the traditional means of accessing new cooperative agreements before the award of the LWA agreement, an operating unit indicates the level of resources it would like to commit (pending availability of funding). The second mode of access is new once the LWA is awarded, Missions and Bureaus develop their own stand-alone cooperative agreement or grant (called an associate award) with any nongovernmental organization that is awarded an LWA agreement (leader award) under the Request for Applications without repeating the competition process — as long as the associate cooperative agreements or grants are consistent with the general program description of the lead award.

Type:	Cooperative Agreement
End Date:	TBD
Geographic Scope:	Global
USAID Contact:	Jerry Bisson
Telephone:	(202) 712-4178
Fax:	(202) 216-3174
E-mail:	jbisson@usaid.gov

Description of Services This LWA's objective will be the conservation of globally significant areas of biodiversity through programs that are sustainable, focused, and adaptive. Programs supporting on-the-ground biodiversity conservation will build upon and strengthen local capacity, utilize local personnel, organizations, and facilities to the maximum extent possible, and collaborate with USAID and other organizations engaged in related activities. Program objectives can be met in two ways: (1) site-based (*in situ*) activities in areas of globally significant biodiversity and (2) interventions that improve the policy environment, thereby substantially contributing to biodiversity conservation.

Cooperator(s) TBD

Biodiversity Support Program Cooperative Agreement

Description of Services The Biodiversity Support Program is a consortium of the World Wildlife Fund, the Nature Conservancy and World Resources Institute that implements a variety of on-the-ground programs to conserve biodiversity. By providing research and analysis in the conservation field, this

program also equips the global conservation community with important causal and methodological insights that will advise future endeavors on behalf of biodiversity. The program promotes increased awareness, knowledge and human institutional capacity necessary to conserve biological diversity and sustain a healthy and secure living resource base. Encompassing terrestrial and aquatic ecosystems, its programs transcend national boundaries, sectors and disciplines to demonstrate the crucial linkages between biodiversity conservation and human/economic development. Program participants include individual researchers and activities, local communities, international and developing country nongovernmental

organizations, and domestic and foreign universities, research institutions and government agencies

Biodiversity in Regional Development Cooperative Agreement

Description of Services The purpose of Biodiversity in Regional Development (BiRD) is to raise awareness of biodiversity conservation issues and influence regional planning and development efforts in key ecosystems around the world. The program is based on the premise that sustainable conservation can only be achieved when biodiversity is included as a value in the development planning process. Through this cooperative agreement, Conservation International uses a multifaceted approach to influence regional understanding and consideration of conservation investments in Latin America, Indonesia and Papua New Guinea. This includes refining conservation priorities using available information and the knowledge of local, national and international experts, filling in gaps in understanding through biological assessments, and using economic and policy analysis to define a broader range of choices for decision-makers. Using Conservation International's hierarchical approach to planning from the level of

Partnership for Biodiversity Interagency Agreement

Description of Services This interagency agreement uses the significant biodiversity conservation expertise of the U S Department of the Interior and the U S Peace Corps. It promotes biodiversity conservation in selected, internationally designated sites (e.g., Biosphere Reserves and World Heritage Sites) or sites that have the potential to be so designated. The efforts involve combining the expertise of U S Department of Interior employees on a short-term basis with the technical skills of full-time U S Peace Corps volunteers to support long-term conservation efforts of host-country communities and institutions. In so doing, the Partnership works with representatives from host-country governments and appropriate nongovernmental organizations.

Forestry

Forest Resources Management II Activity

Program Description This activity works closely with partners to implement a long-term strategy for strengthening the sustainable management of natural forests and tree systems. It has three components: (1) an Interagency Agreement with the U S Forest Service, (2) a Participating Agency Support Agreement (PASA) with the U S Peace Corps, and (3) a Resources Support Services Agreement (RSSA) with the U S Department of Agriculture Foreign Agricultural Service. The Activity's strategy includes providing technical assistance and other forms of support to Mission and Regional Bureau forestry activities, setting the research agenda of international research institutions and integrating their results into field applications, and supporting demonstration, training and dissemination of sustainable forest management practices and policies to promote their adoption for the conservation of forest ecosystems, rehabilitation of degraded lands, and mitigation of fires through better forest management practices. Whenever possible, this is done in collaboration with Mission programs and involves leveraging resources of donors and other institutions. The strategy recognizes that local rights to forest benefits and participation in forest management are essential for improving management practices. In addition to the adoption of improved practices and policies, improved and continued monitoring of forest use and health is necessary for long-term forest conservation. Program focus includes integrated forest monitoring, reduced

impact management, increased community investment in natural resources management, strengthened rehabilitation of degraded lands, integrated watershed management, and development and field testing of methodologies to measure carbon in various forest ecosystems

Cooperators Regional Bureaus, Missions, U S Department of Agriculture Forest Service International Programs, U S Peace Corps, International Center for Forest Research (CIFOR), International Center for Research in Agroforestry (ICRAF), International Center for Living Aquatic Resources Management (ICLARM), Asia Forest Network (AFN), Tropical Forest Foundation (TFF) and Winrock International

1 U S Forest Service Interagency Agreement

Integrated Water and Coastal Resources Management Indefinite Quantity Contract

Description of Services The Integrated Water and Coastal Resources Management Indefinite Quantity Contract covers all aspects of integrated water and coastal resources management. While emphasizing "integration," it also deals with individual aspects of water and coastal management. This includes policy frameworks and integrated approaches to ensure public participation as well as agricultural soil and water conservation, irrigation, hydrology and meteorology, industrial water pollution, aquatic biodiversity and habitat, urban and rural water supply and sanitation, and fisheries management. The Water Indefinite Quantity Contract is expected to be awarded in Fiscal Year 1999.

Economic Growth and Agricultural Development. RAISE is a new technical assistance partnership with the objective of seeking out and capturing the huge potential for raising rural incomes while improving natural resources management. It promotes commercially and environmentally sound policies and investments aimed at natural resource-based industries and supports community-based sustainable, natural resource management.

Office of Environment and Urban Programs

- The Challenge** Urban populations are exploding in developing countries. Over the next two decades, the urban population in developing countries is expected to increase by 2.5 billion people. Although urbanization brings positive socioeconomic changes in many countries, rapid growth rates place tremendous pressure on most developing countries' limited resources and management capacities as well as their cities' ability to provide basic urban services. Cities decay and lose their potential for economic and social growth when national and local governments are unable to sustainably manage the urban environment. These include environmental degradation, harmful impacts on human health, political instability and unfulfilled economic development opportunities.
- The Response** The mission of the Office of Environment and Urban Programs is to improve the living conditions of the urban poor by promoting development practices that balance social, economic and environmental concerns without endangering the well-being of future generations. The Office collaborates with host-country governments (national and local level), community-based organizations, the private sector and other donor agencies and international organizations to identify creative and equitable approaches to sustainable urbanization, strengthen the management capacity of local governments, encourage participatory democracy and facilitate decentralization policy reform.
- Support Services** The Office's approach to sustainable urbanization includes the following:
- ***Expanded and Equitable Delivery of Urban Environmental Services and Shelter*** Sustainable urbanization rests on the premise that protecting the health of human settlements and natural ecosystems is critical for long-term economic security. Economic benefits will result from the urbanization process if urban residents, especially the poor, are given access to decent environmental services and shelter.
 - ***More Effective Local Governments*** Sustainable urbanization is brought about through management decisions that integrate environmental, social and economic concerns, especially when allocating public resources. Such decisions are largely dependent on the institutional capacity of host local governments and their relationship with both central authorities and civil society. To the extent that local governments can be helped to be more responsive, accountable and transparent in their management practices, countries will benefit from a more sustainable and appropriate course toward economic development and environmental protection.
 - ***Reduced Urban Pollution*** An urban environmental management system is a comprehensive approach to pollution prevention and control. It addresses pollution from source to residue generation and use to disposal. Through the application of environmental management system policies and audits, industrial and municipal waste streams and energy demands are broken down into discrete segments that are then analyzed for opportunities for energy efficiency, emissions reductions, resource recovery, recycling and waste minimization. Taking advantage of these opportunities results in reduced pollution of urban air, water and land resources as well as in direct or indirect cost savings.

Sustainable Urbanization

Sustainable Urban Management Indefinite Quantity Contract

Description of Services This contract provides quick-response, short-, medium-, and long-term advisory services, technical assistance, and training in support of USAID's goal of well-managed urbanization. Work under this contract will focus on three of USAID's strategic objectives

Municipal Development Management Contract

Description of Services This contract responds to the urban management needs of developing countries by providing quick-response, short- and medium-term assistance to Missions and Bureaus. Activities include strengthening local government and urban management in key areas, such as credit

training and implementation, local government management, public participation in local governance, land tenure/land use planning, economic development and disaster management. The Municipal Development Management contract also facilitates programs such as the Environmental Law Program which provides USAID with a legal and regulatory policy resource center that researches, reports, and disseminates best practices in environmental policy models. The program's direct field assistance in environmental law and policy has included short- and long-term field support for legislative and regulatory drafting, comparative legal research and analysis, facilitated policy reform dialogues, and technical training and capacity building in legal policy design and implementation.

U S Environmental Protection Agency Interagency Agreement

Description of Services The purpose of this agreement is to provide USAID's Bureaus, Missions and RUDOs with a mechanism to collaborate with the U S Environmental Protection Agency in developing activities in three areas: improved environmental management, global climate change, and environmental information exchange and training. A sampling of proposed activities in Fiscal Year 1999 include supporting two workshops in Asia Pacific Economic Cooperation (APEC) countries on phasing lead out of gasoline, developing a resource sites exchange for municipal Environmental Management Systems (EMS) and developing a pilot climate wise program.

International Council for Local Environmental Initiatives Cooperative Agreement

Description of Services Under this cooperative agreement, the International Council for Local Environmental Initiatives (ICLEI) will be working with three to five cities in both Mexico and the Philippines to reduce greenhouse gas emissions through the implementation of a five milestone performance framework

(1) emissions inventory, (2) emissions forecast, (3) emissions reduction target, (4) emissions action plan, and (5) plan implementation and emissions monitoring. More than 200 cities worldwide are participating in ICLEI's Cities for Climate Protection program. ICLEI will also engage national government officials in these local efforts to demonstrate the role that municipal governments can play in implementing national climate action plans.

Office of Energy, Environment and Technology

The Challenge	Economic growth in many developing economies is seriously curtailed by insufficient energy supply, inadequate institutional capability, and a lack of appropriate technology to operate and manage energy systems efficiently. Expansion of energy services places a huge financial burden on these countries and increases environmental threats, particularly the release of greenhouse gas emissions — a leading contributor to global climate change. As such, it is in the United States' economic and national security interests to assist developing countries in creating the institutional capacity and the legal, regulatory and economic framework necessary to increase environmentally sound energy production and tap private investment to finance these improvements.
The Response	The Office of Energy, Environment and Technology has adopted a twofold strategy to address these issues: (1) assisting developing countries in putting in place market-oriented policies and institutions to support private energy and environmental initiatives and (2) arranging cooperative relationships to promote environmentally sound production and use of energy. Not only does this provide developing countries with access to commercially viable technology and effective management practices, it also helps US industry become more competitive in the international marketplace. Key partners in this process include developing countries, the US energy and environment industries, other US federal government agencies, multilateral development banks and nongovernmental organizations.
Support Services	The Office's integrated approach for improving energy choices available to developing countries includes the following: <ul style="list-style-type: none"><li data-bbox="467 1094 1445 1398">■ <i>Energy Sector Policy and Planning</i> Privatization and policy reform offer opportunities to address the increasing power needs of developing countries in an economically efficient and environmentally sound manner. To maximize profits, private power developers are required to be more efficient than their public sector counterparts in monitoring resource use and operations. In addition, private participation in the energy sector accelerates economic growth and social development by immediately alleviating power shortages and other energy-related problems that restrict growth while simultaneously lessening the capital burden placed on government.<li data-bbox="467 1419 1445 1587">■ <i>Clean Energy Production and Use/Climate Change Mitigation</i> Innovative energy technology solutions that use indigenous resources, maximize existing capabilities and increase energy efficiency can result in an increase in economic savings and environmental benefits. These include reducing greenhouse gas emissions that contribute to global climate change.<li data-bbox="467 1608 1445 1839">■ <i>Renewable Energy</i> Renewable energy technologies reduce pollution, greenhouse gas emissions and dependence on imported fossil fuels. They are also conducive to electrifying remote communities or homes, where even small amounts of electrical power can dramatically raise living conditions. Larger renewable systems — including those based on geothermal, solar and wind energy as well as the use of biomass for cogeneration — all provide environmentally sound alternatives to conventional fossil fuel options.<li data-bbox="467 1860 1445 1929">■ <i>Energy Efficiency</i> Improving energy efficiency is the easiest and least expensive way to avoid the need for new power plants, reduce greenhouse gas emissions.

and other pollutants, and lower a nation's economic burden from energy imports. Optimizing consumption patterns and power conversion through improved transmission and distribution on the supply-side can yield substantial savings.

- **Training** These activities are crucial to the exchange of information necessary to identify, use and manage energy resources effectively.

and technology transfer. Contract services can be accessed to design, develop and implement cost-effective and targeted energy and environmental technical training. These provide specialized technical training expertise, such as training needs assessments, medium- and short-term skills and knowledge-based training courses and workshops, study tours, stakeholder partnerships and exchanges, educational and informational outreach programs, and alumni programs. Services are obtained through negotiated task orders. Task orders may be written to extend throughout the life of the contract (i.e., three years with one two-year optional extension). The cumulative value of activities under all three Indefinite Quantity Contracts combined cannot exceed \$50 million.

Additional Renewable Energy Mechanisms

Renewable Energy Cooperative Agreement

Description of Services The renewable energy team issued a Request For Application (RFA) in the first quarter of Fiscal Year 1999. The team expects to award one or more cooperative agreement(s) by the fiscal year's third quarter. The new cooperative agreement(s) will support activities designed to extend the expansion of sustainable market potential of commercial renewable energy technologies in USAID-assisted countries. Programs under the cooperative agreement will include technology exchanges, multilateral development bank support, technical assistance in the area of policy reform, and capacity building.
