Executive Summary

Total U.S. imports of olives reached a level of \$224.3 million (CIF value) in 1999, up 12 percent over the 1998 level of \$200.1 million. This increase was due to higher average CIF import values and a slight increase in the total quantity imported during CY 1999, compared to year earlier levels. Total quantities of olives imported into the U.S. market have increased 20 percent over the last five years to 94,245 MT in CY 1999.

U.S. imports of olive oil and olive oil products are classified under the U.S. Harmonized Tariff Schedule into 34 different categories. Green, whole stuffed olives in containers less than 8 kg represented almost 39 percent of total U.S. imports of olives, totaling \$86.9 million in CIF value during 1999. The second largest category of import trade on the U.S. market is for sliced black olives in a can. These totaled \$32.6 million in CIF value during 1999, representing 14.5 percent of total U.S. imports of olives.

Black whole olives and green broken or sliced, salad style olives were the third and fourth largest import categories, totaling \$26.5 million and \$17.5 million respectively. Whole green stuffed olives in HRI packs (larger than 8 kg) totaled \$12.2 million.

These five import categories accounted for 78 percent of the total CIF value of U.S. imports of olives during CY 1999.

Spain is the dominant supplier of olives to the U.S. market, exporting \$164.6 million (CIF value) and representing 73.4 percent market share of total U.S. imports of olives. Greece was the second largest supplier of olives to the U.S. market, with trade valued on a CIF value basis at \$31.9 million during 1999. This represented a CIF market share in CY 1999 of 14.2 percent.

Morocco was the third leading exporter of olives to the U.S. market during CY 1999. Last year, the U.S. imported \$24.3 million (CIF value) in olives from Morocco. During CY 1999, Morocco's CIF value market share of the total U.S. olive import market was 10.8 percent.

These top three supplying countries therefore supplied 98.4 percent of total U.S. imports of all olive products, on a CIF value basis. The volume of their CY 1999 exports of olive products to the U.S. market totaled 84,085 MT, which accounted for 89.2 percent of the total tonnage imported last year.

Egypt has shipped only very limited quantities of olives to the U.S. market over the five-year period covering calendar years 1995 through 1999. The largest shipments over this period occurred in CY 1996, when 17 MT were exported at a CIF value of \$37,000. Shipments amounting to only a few thousand Dollars took place in calendar years 1995, 1997 and 1999.

But the Egyptian export market for olives is growing, albeit not to the United States. One major classification accounted for 88% of the total exports by volume and 75% by value, increasing by 14% in value and 15% by volume over 1998.

It is clear that Egypt has the capacity to produce olives in sufficient quantities to at least attempt to gain entry in the US market. Only a 1% market share of the US imports represents a 943MT export potential, but represents less than one half of 1% of Egyptian production. At an average price of \$1.75/kg, a 1% market share would represent olive export sales from Egypt in excess of \$1,650,000.

One area where Egypt is faring well is with pitted green olives sold to Spain at an average price of \$1.00 kg. But these same olives are sold by Spain, depending on HTS code, to the United States at considerably higher price points.

Based on this preliminary analysis of the U.S. import trade in olives, Egyptian olive exporters will have to aggressively market their products on the U.S. market, and will most probably need to offer delivered export price levels that are highly competitive with those from Spain, Greece, and Morocco. Since Egypt is not currently a player on the U.S. market for olives, exporters will most likely need to be in a position to offer landed export prices at levels below those of their competitor companies in Spain, Greece and Morocco, in order to develop any significant new long-term export business.

Then they must be prepared to back up their pricing with desirable packaging and customer relations. Getting the olives to market at a competitive price, in a master container that does not fall apart, in a package the consumer wants and with vigorous follow-up and after sales service should be a winning combination to sustainable olive sales to the United States of America!

U.S. Import Market for Olives

Overview

According to official calendar year (CY) 1999 import statistics, total U.S. imports of olives reached a level of \$224.3 million (CIF value) last year, up 12 percent over the CY 1998 level of \$200.1 million. This increase was due to higher average CIF import values and a slight increase in the total quantity imported during CY 1999, compared to year earlier levels.

Total quantities of olives imported into the U.S. market have increased 20 percent over the last five years, from a level of 78,291 metric tons (MT) during CY 1995 to 94,245 MT in CY 1999.

The largest category of import trade on the U.S. market is for Olives, Green, Whole, Stuffed, In Containers Less Than 8 KG, In Saline Solution, Not Frozen, which totaled \$86.9 million in CIF value during CY 1999, representing almost 39 percent of total U.S. imports of olives.

The second largest category of import trade on the U.S. market is for Olives, Not Green In Color, Sliced, Canned In A Saline Solution, Not Frozen, which totaled \$32.6 million in CIF value during CY 1999, representing 14.5 percent of total U.S. imports of olives.

These two largest import categories are followed by: Olives, Not Green In Color, Not Canned, In Saline Solution, Not Frozen, NESOI (\$26.5 million); Olives, Green, Broken, Sliced Or Salad Style, Containers Holding Less Than 8 KG, In A Saline Solution, Not Frozen (\$17.5 million); and Olives, Green, Whole, Stuffed, In Saline Solution, In Containers Holding More Than 8 KG Each, Not Frozen (\$12.2 million).

These five import categories accounted for 78 percent of the total CIF value of U.S. imports of olives during CY 1999.

U.S. imports of olive oil and olive oil products are classified under the U.S. Harmonized Tariff Schedule into 34 different categories. The total CIF values of U.S. imports during CY 1999 by tariff classification categories are given below. The rankings are offered as a quick guide for the purposes of Egyptian olive exporters to determine market potential for their product.

USHTS Code	Product Description	1999 Imports (\$1000 CIF)	Ranking (Value)
0709903500	Olives, Fresh Or Chilled	\$ 2,463	13
0711201800	Olives, Not Pitted, Green In Color, In A Saline Solution > 8 Kg, Drained Weight, Used For Repacking Or Sale, Described In Additional U.S. Note 5 To This Chapter 7 And Entered Pursuant To Its Provisions	118	29

Major Suppliers of Olives to the U.S. Market

Spain is by far the dominant supplier of olives to the U.S. market. During CY 1999, Spain exported \$164.6 million (CIF value) of olives to the U.S. market, representing 73.4 percent of total U.S. imports of olives. During CY 1999, this trade increased 15 percent, up from \$142.1 million during CY 1998. In terms of tonnage, Spain exported 62,098 MT during CY 1999, accounting for almost 66 percent of the total 94,245 MT the U.S. imported from all sources.

Greece was the second largest supplier of olives to the U.S. market, with trade valued on a CIF value basis at \$31.9 million during CY 1999, up 8.8 percent over year earlier levels. This represented a CIF market share in CY 1999 of 14.2 percent of the total U.S. import market for olives. In terms of tonnage, Greece exported 11,006 MT, representing 11.7 percent of the total quantity imported by the U.S. in CY 1999.

Morocco was the third leading exporter of olives to the U.S. market during CY 1999. Last year, the U.S. imported \$24.3 million (CIF value) in olives from Morocco, which was up 12.1 percent over the level of \$21.7 million imported by the U.S. during CY 1998. During CY 1999, Morocco's CIF value market share of the total U.S. olive import market was 10.8 percent. Total tonnage of olives exported by Spain to the U.S. market during CY 1999 was 10,961 MT, representing 11.6 percent of the total quantity imported by the U.S. during CY 1999.

These top three supplying countries therefore supplied 98.4 percent of total U.S. imports of all olive products, on a CIF value basis. The volume of their CY 1999 exports of olive products to the U.S. market totaled 84,065 MT, which accounted for 89.2 percent of the total tonnage imported last year.

Spain

The U.S. import market for olives is dominated by Spain, which supplied 73.4 percent of the total trade in these products. During CY 1999, the U.S. imported 62,098 MT of olives Spain, at a CIF value of \$164.6 million, which represented an increase of 15 percent in terms of CIF value over the CY 1998 trade level.

The largest product in Spain's olive trade with the U.S. during CY 1999 was Olives, Green, Whole, Stuffed, In Containers Less Than 8 Kg, In Saline Solution, Not Frozen. Spain was also the dominant supplier to the U.S. market within this tariff classification category, shipping 98.5 percent of total U.S. imports of this olive product, at a CIF value of \$85.6 million. Average CIF import prices from Spain during CY 1999 for this olive product were \$3.12 per kilogram.

The second leading olive product shipped by Spain to the U.S. market during CY 1999 was Olives, Not Green In Color, Sliced, Canned In A Saline Solution, Not Frozen. Spain was also the dominant supplier to the U.S. market within this tariff classification category, shipping 65.7 percent of total U.S. imports of this olive product, at a CIF value of \$21.4 million. Average CIF import prices from Spain during CY 1999 for this olive product were \$1.76 per kilogram.

The third leading olive product shipped by Spain to the U.S. market during CY 1999 was Olives, Green, Broken, Sliced Or Salad Style, Containers Holding Less Than 8 KG, In A Saline Solution, Not Frozen. Here again, Spain was also the dominant supplier to the U.S. market within this tariff classification category, shipping 90.4 percent of total U.S. imports of this olive product, at a CIF value of \$15.8 million. Average CIF import prices from Spain during CY 1999 for this olive product were \$2.32 per kilogram.

The fourth leading olive product shipped by Spain to the U.S. market during CY 1999 was Olives, Green, Whole, Stuffed, In Saline Solution, In Containers Holding More Than 8 KG Each, Not Frozen. As in the above three product categories, Spain was again the dominant supplier to the U.S. market within this tariff classification category, shipping 96.6 percent of total U.S. imports of this olive product, at a CIF value of \$11.8 million. Average CIF import prices from Spain during CY 1999 for this olive product were \$1.97 per kilogram.

Table 1 below shows total U.S. imports of olive products, by USHTS code, from Spain during CY 1995—1999, as well as CY 1999 average CIF import prices and market share.

Table 1. US Imports of Olive Products from Spain, by USHTS Product Codes, CY 1995-1999, with 1999 Market Share and Average CIF Prices

Greece

The second leading supplier of olives to the U.S. market is Greece, which had a market share on a CIF value basis of 14.2 percent last year. During CY 1999, the U.S. imported 11,006 MT of olives from Greece, at a CIF value of \$31.9 million, which represented an increase of 8.8 percent in terms of CIF value over the CY 1998 trade level.

Even though Greece ships olives that enter the U.S. under many different tariff classification categories, most of this trade with the U.S. during CY 1999 was Olives, Not Green in Color, Not Canned, In Saline Solution, Not Frozen, NESOI. Total U.S. imports from Greece under this product category were \$21.5 million during CY 1999, representing almost 77 percent of the total Greek olive trade with the U.S. last year. Greece was also the dominant exporter of this product category to the U.S. market last year, supplying almost 82 percent of total U.S. imports during CY 1999. Average CIF import prices from Greece during CY 1999 for this olive product were \$2.42 per kilogram.

Table 2 below shows total U.S. imports of olive products, by USHTS code, from Greece during CY 1995—1999, as well as CY 1999 average CIF import prices and market share.

Morocco

The third leading supplier of olives to the U.S. market is Morocco, which had a market share on a CIF value basis of 10.8 percent last year. During CY 1999, the U.S. imported 10,961 MT of olives from Morocco, at a CIF value of \$24.3 million, which represented an increase of 12.1 percent in terms of CIF value over the CY 1998 trade level.

The largest product in Morocco's olive trade with the U.S. during CY 1999 was Olives, Not Green in Color, Sliced, Canned In A Saline Solution, Not Frozen. Morocco was the second leading supplier to the U.S. market within this tariff classification category after Spain, shipping 34 percent of total U.S. imports of this olive product, at a CIF value of \$11.1 million. Average CIF import prices from Morocco during CY 1999 for this olive product were \$1.95 per kilogram, which was higher than the average CIF import price for this product from Spain last year, valued at \$1.76 per kilogram on average.

The second leading olive product shipped by Morocco to the U.S. market during CY 1999 was Olives, Not Green In Color, Other, Including Wedged Or Broken, Canned In A Saline Solution, Not Frozen. Within this tariff classification category, Morocco was the leading supplier to the U.S. market, shipping 78.6 percent of total U.S. imports of this olive product, at a CIF value of \$3.7 million. Average CIF import prices from Morocco during CY 1999 for this olive product were \$1.67 per kilogram.

The third leading olive product shipped by Morocco to the U.S. market during CY 1999 was Olives, Not Green in Color, Not Canned, In A Saline Solution, Not Frozen, NESOI. Morocco's share of the U.S. import market within this tariff classification category was 5.6 percent of total U.S. imports of this olive product, with exports valued at \$1.5 million on a CIF basis. Average CIF import prices from Morocco during CY 1999 for this olive product were \$1.31 per kilogram. Within this product category, Greece is the leading supplier of this olive product to the U.S. market, with a market share of 81 percent on a CIF value basis during CY 1999. Average CIF import prices for this olive product from Greece last year were \$2.42 per kilogram, significantly higher (85 percent) than the average CIF import price for this olive product from Morocco during CY 1999.

The fourth leading olive product shipped by Morocco to the U.S. market during CY 1999 was Olives, Green, Broken, Sliced Or Salad Style, In Containers Holding Less Than 8 KG, In A Saline Solution, Not Frozen. The total CIF value of Morocco's CY 1999 exports to the U.S. market for this olive product reached almost \$1 million, up 108 percent over the level of CY 1998. This level of trade accounted for 5.7 percent of total U.S. imports of this olive product last year. Within this tariff classification category, Spain is the dominant supplier to the U.S. market, accounting for 90 percent of total U.S. imports on a CIF value basis during CY 1999. Average CIF import prices from Morocco during CY 1999 for this olive product were \$1.80 per kilogram. Spain's average price, at \$2.32 per kilogram, was significantly higher (29 percent) last year than Morocco's average CIF import price for this olive product.

Table 3 below shows total U.S. imports of olive products, by USHTS code, from Morocco during CY 1995—1999, as well as CY 1999 average CIF import prices and market share.

Egypt

Egypt has shipped only very limited quantities of olives to the U.S. market over the five-year period covering calendar years 1995 through 1999. The largest shipments over this period occurred in CY 1996, when 17 MT were exported at a CIF value of \$37,000. Shipments amounting to only a few thousand Dollars took place in calendar years 1995, 1997 and 1999.

Does Egypt have the capability and capacity to be a player in the US olive market? Table 4 below shows the production of olives in Egypt in number of hectares harvested, yields per hectare and total metric tonnes produced over a five-year period.

Table 4. Egyptian Olive Production

Egypt Olives	Year				
	1995	1996	1997	1998	1999

Tables 5 and 6 (pages 33 and 34) reflect Egyptian olive exports to the world for 1998 and 1999, respectively, as reported by CAPMAS. When analyzing the potential for Egyptian opportunities, it is difficult to compare data between Harmonized Tariff Schedule categories and the CAPMAS data, as reporting by CAPMAS does not strictly correlate to the published schedule of the WTO or United States. For instance, CAPMAS reports olive exports under two eight-digit categories: 2001.90.10 and 0711. When broken down by classification under USHTS codes, the first classification reads as follows:

From Chapter 20. USHTS

2001: "Vegetables, fruit, nuts and other edible parts of plants, prepared or preserved by vinegar or acetic acid".

2001.90: "Other": "Capers:"

2001.90.10.00: "In immediate containers holding more than 3.4kg

No further classification suffix numbers exist that correlate to the CAPMAS schedules of 2001.90.10.10 or 2001.90.10.20. Egyptian trade data lists these as "Olive, prepared or preserved by vinegar or other" and Olive, stoneless [sic. pitted] prepared or preserved by vinegar or other"

From Chapter 7. USHTS

0711: "Vegetables, provisionally preserved (for example, by sulfur dioxide gas, in brine, in sulfur water or in other preservative solutions), but unsuitable in that state for immediate consumption:"

0711.20: "Olives: Not pitted: Green in color, in a saline solution, in containers each holding more than 8kg, drained weight, certified by the importer to be used for repacking or sale as green olives:"

No additional statistical suffix exists for "00.10" as reported by CAPMAS.

Based on the above contradictions, one must make their own assumptions. Accordingly, for the purposes of this market opportunity report, we are assuming that the olives shipped from Egypt under the classification 2001.90.1010 are not capers (capers are not grown in Egypt) but whole olives packed in bulk containers weighing more than 3.4 kg. One has no way of knowing if these are green or black in color.

Under the 0711 classification, we assume that the reported exports are "not-pitted, green olives" in bulk packaging of more than 8 kg. We are unclear as to whether these are raw or ready for consumption.

If one were to interpolate the CAPMAS data, perhaps one could conclude that the 2001.90.10.10 classifications are "not-pitted olives", green or black. The 2001.90.10.20 classification is for "pitted olives", green or black. Both classifications would be in packaging between 3.4 kg and 8 kg.

Perhaps the 0711.20.00.10 olives are green olives with pits shipped in packages weighing more than 8 kg. Perhaps the 0711.20.00.90 are green olives in more than 8 kg packages but converted in some way – pitted, sliced, diced, stuffed, etc. It is apparent that for statistical gathering purposes, customs has contracted the HTS codes to a relatively few categories, mixing colors and/or converted (added value) product. At the time of this writing, ALEB could not gain more information from olive shippers that would clarify this issue.

What is clear from these two sets of figures is that the Egyptian export market for olives is growing. Classification 2001901010 "Olives prepared or preserved by vinegar or other" in 1999 accounted for 86% of the total by volume and 75% by value. This classification grew by 14% in value and 15% by volume over 1998.

But it is unsettling to see the volatility in the customer base. Egypt exported olives to thirteen countries in 1998. They exported to nine countries in 1999. Of the nine countries in the last year, four were new, representing a "swing" of eight markets, or almost two thirds of the 1998 market base. Further, an unhealthy dependency existed in 1999 on two countries: Israel accounted for 71% of the total volume and India accounted for 75% of the total value. The dependency is serious when one looks at the prices. Israel paid 19% of the average price and 18% of the weighted average price for this predominant classification. India paid 388% of the average price and 332% of the weighted average price. Yet India absorbed only 6% of the volume.

It is clear that Egyptian olive producers are seriously losing price negotiations in Palestine and Israel, only marginally improving in francophone Europe, holding the line in the Gulf markets and competing well on price in the United States, but with low volumes.

One area where Egypt is faring well is with pitted green olives sold to Spain at an average price of \$1.00 kg. But these same olives are sold by Spain, depending on HTS code, to the United States at considerably higher price points. The value of knowing ones' market and building customer relationships is the moral of the above scenarios.

Table 7 (pages 35 and 36) shows all Egyptian shipments of olives, by USHTS product categories, to the U.S. market over the CY 1995 through 1999 period.

Summary and Recommendations

The Spanish are by far the dominant player on the U.S. import market for olives, holding an amazing market share of 73.4 percent based on CIF value. In addition to this dominant market share position, it appears from analyzing U.S. import statistics that Spain also appears to command premium prices in some product categories over olive products from their two distant competitor countries, Greece and Morocco.

The overall U.S. import market for olives appears to be growing, both in terms of value and volume. The total volume of olives imported has increased 20.4 percent over the five-year period from 1995 to 1999. U.S. imports of olives from these top three supplying countries all registered significant increases, in terms of CIF values, during CY 1999. Spain's trade led the pack with a 15 percent increase, followed by Morocco (the 3rd leading supplier), which registered a 12.1 percent increase, with Greece also posting a healthy 8.8 percent gain in exports.

It is clear that Egypt has the capacity to produce olives in sufficient quantities to at least attempt to gain entry in the US market. Only a 1% market share of the US imports represents a 943MT export potential, but represents less than one half of 1% of Egyptian production. At an average price of \$1.75/kg, a 1% market share would represent olive export sales from Egypt in excess of \$1,650,000. During the study tour to the Food Marketing Institute exhibition in Chicago in May 2000, there was substantial interest voiced in Egyptian olives by potential buyers in the US. It became apparent that an Egyptian producer of olives sold to a Spanish company, who in turn sold to a particular buyer in the States. If Egypt were to target 1% of the US import market by bypassing Spanish resellers, this would only represent a 1.5% portion of Spain's exports – not a large enough erosion of market share to instigate retaliatory or predatory measures by Spanish suppliers. Even if Egypt were to inadvertently take Greek or Moroccan market share, the "hit", if singly apportioned, would represent 8.5% of a single country's market share. Divided proportionately, the erosion in Greek or Moroccan market share would be slightly more than 4%. In any scenario, this would certainly be attainable in the first year.

Based on this preliminary analysis of the U.S. import trade in olives, Egyptian olive exporters will have to aggressively market their products on the U.S. market, and will most probably need to offer delivered export price levels that are highly competitive with those from Spain, Greece, and Morocco. Since Egypt is not currently a player on the U.S. market for olives, exporters will most likely need to be in a position to offer landed export prices at levels below those of their competitor companies in Spain, Greece and Morocco, in order to develop any significant new long-term export business.
