

Supporting Egypt's Processed Foods Export Industry

Herbs & Spices Opportunities in the United States of America

Prepared By Agriculture-Led Export Businesses (ALEB)

February 2002

Funded by U.S. Agency for international Development

USAID/Egypt RP 0254 Under Contract No: 263-C-00-99-00011-00

USAID Cognizant Technical Office: USAID/Egypt/EG/ED CTO: Mr. Tarek Shata

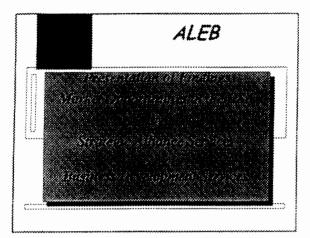

## Prepared by Douglas A. Anderson

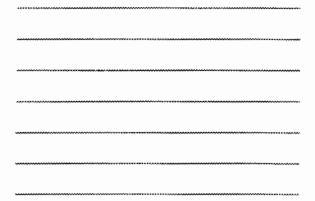

Director Business Development and Marketing information Services (BDMIS)

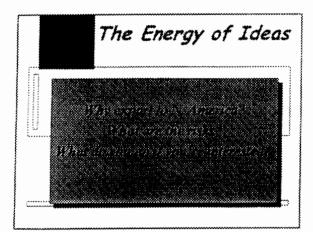

### For Abt Associates Inc.

### In Cooperation With

Dr. Tom Herlehy, Director, Trade Association and Strategic Alliance Services (TASAS)

- \$600 billion market
- · Ethnically heterogeneous
- Progressive consumer
- · Logistically accessible
- · Good growth rates in Egyptian products
- Common law transparent

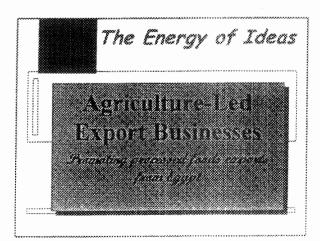

#### Abt Associates Inc

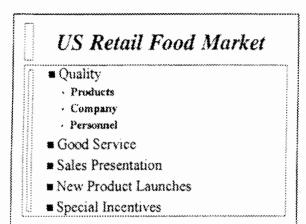

### What are the risks?

- \* Standards & regulations are more strict
- Requires more research & analysis due to size of market
- More time sensitive due to location
- Scales of economy are much larger
- Communication language & time zones

### What do you need to do to access this market

- \* Access information in the public domain
  - US Embassy Commercial Attaché
     Internet
  - Universities & Government Agencies
- Network attend trade fairs
- Make a financial & time commitment
- Select your importer/distributor carefully
- \* Obtain marketing assistance

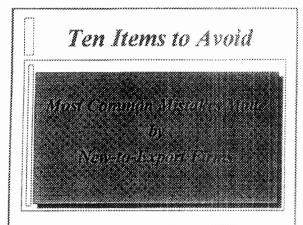

### You'll Need to Know.....

- Full range of market requirements
- Product characteristics
- Consumer trends and preferences
- Packaging & Labeling
- Pricing & Promotion
- Quality standards
- Applicable US Regulations

#### Once You Understand Market Requirements, You'll Need....

- Well-conceived business/marketing plan
- Clear objectives and strategies
- Long-term commitment to human & financial resources necessary to implement the plan
- Maintain flexibility to make marketing changes, including product modifications or improvements

.....

# *Failur*e

...to obtain qualified export counseling and to develop a master international marketing plan before you start an export business.

# Insufficient

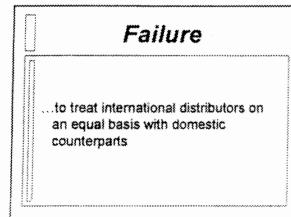

- ...commitment by top management to overcome the initial difficulties and financial requirements of exporting.
- ...care in selecting overseas agents or distributors

# Chasing orders

...from around the world instead of establishing a basis for profitable operations and orderly growth

# Neglecting

...export orders when domestic business booms

# **Unwilling**ness

.....

.....

.....

. .

......

.....

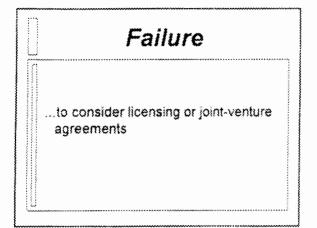

...to modify products to meet regulations or cultural preferences of other countries

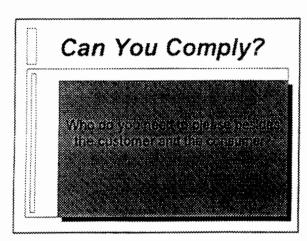

# *Failur*e

...to print services, sales and warranty messages in locally understood languages

## *Failur*e

...to consider use of an export management company or other marketing intermediary

## A Shared Responsibility

The safety and wholesomeness of US food products are safeguarded first through strict regulations, but also through pre-market clearances, mandatory production practices inspections, and random, routine product sampling. All imported food products are required to meet the same standards as domestic goods.

# US Customs Service

an agency of the U.S. Department of Treasury responsible for the assessment and collection of import duties and taxes and for the control of carriers, persons, and articles entering or departing the United States in addition to more than 400 iaws of other agencies governing international traffic and trade.

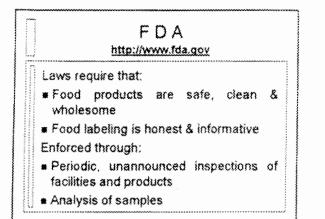

### EPA

http://www.epa.gov

EPA is the regulatory agency for pesticides. Through its Office of Pesticide Programs (OPP) EPA determines the safety of new pesticide products, sets tolerance levels for pesticide residues in foods, which FDA then enforces, and publishes directions for the safe use of pesticides.

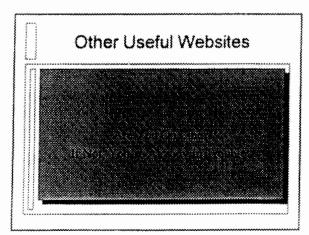

#### FDA http://www.fda.gov

FDA is the scientific regulatory agency responsible for the safety of all cosmetics, drugs, biologics, medical devices, electronic products that emit radiation, as well as all food items, except meat, poultry, frozen and dried eggs (USDA) and the labeling of electrolic beverages and tobacco (ATF).

#### USDA http://www.usda.gov

USDA's regulatory activities are carried out by the Animal and Plant Health Inspection Service (APHIS), the Food Safety Inspection Service (FSIS), Grain Inspection Packers and Stockyards Administration (GIPSA), Federal Grain Inspection Service (FGIS), and the Agricultural Marketing Service (AMS).

#### Herbs & Spices

.....

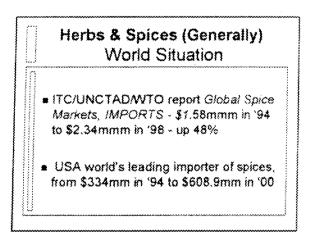

Herbs are used for teas and supplements (ground or extracts), or added to processed foods for both flavour and perceived and proven health benefits. Spices are also used in teas but are mostly a flavour ingredient for (1) retail to consumers, (2) HRI Sales, and (3) food manufacturing companies.

#### Herbs & Spices

Spices add flavours which consumers are increasingly interested in and in some cases convey reputed health benefits (garlic is a prime example). The world market for herbal medicines has grown 9 percent over the past five years, according to market researcher Euromonitor, after slower growth in previous years. ......

#### Herbs & Spices

Europe was the largest market in 1999, taking 38 percent of the total, or US\$6.69 billion. The US came in second with purchases of US\$4.07 billion, while Asia outside of Japan took third with US\$3.2 billion. The three top selling herbs worldwide are, in order, ginkgo biloba, ginseng and garlic.

### Specialty Foods USA Market

 The rapid growth of the natural products industry throughout the 1990s was characterized by consumer demand for a range of products considered natural and healthy. This market segment includes many products, but can be divided up into several major categories, such as:

### Specialty Foods

USA Market

Organic foods (fresh and processed)

Functional Foods (nutraceuticals)
 Essential oils for flavor and fragrance

·Herbs, spices and botanicals for teas,

remedies, cosmetics, and foods

Supplements for health and nutrition

#### Specialty Foods USA Market

 The Natural Foods Merchandiser estimates that total sales of all natural products in 1999 reached \$28 billion, double the sales level of 1997, and is expected to have exceeded \$31.0 billion in 2000. The market for organic foods is estimated to have attained \$7.8 billion in 2000, continuing a trend throughout the 1990s of double digit growth.

#### Abt Associates Inc

#### Specialty Foods USA Market

.....

.....

 High growth products include organic frozen fruits and vegetables, spices, herbs, and dehydrated ingredients for processed organic foods. In comparison, conventional food sales grew around 2%.

#### Ethnic & Kosher Foods USA Market

Ethnic foods will capture one out of every seven new food dollars spent in the decade ahead. Mainstream consumers, who already account for 75% of ethnic food sales, will continue to contribute to this overall growth as they sample more and different types of ethnic foods.

#### Ethnic & Kosher Foods USA Market

As in the case of organic foods, the retail and food service sales of ethnic foods is also projected to greatly outpace the sale of conventional foods, with forecasts of a 50 percent growth rate over the next decade from an estimated \$50 billion to \$75 billion.

### Ethnic & Kosher Foods USA Market

 The kosher market in the U.S. also continues to grow as kosher certification of food products becomes more appealing to non-Semitic consumers and mainstream food companies continue to seek the kosher seal of approval for many of their brands.

#### Ethnic & Kosher Foods USA Market

 According to a Packaged Facts report, produced by FIND/SVP Publishing, there are now more than 41,000 koshercertified products in the U.S. retail food market. U.S. retail sales of kosher products have increased by 37 percent from \$35 billion in 1997 to an estimated \$47.8 billion in 2000.

and/or GMP compliance before forming potential alliances

Opportunity:

16 USA cos. interested

Constraint:

- 14 cos. in ALEB database have HACCP
- 62 cos, implement GMP

#### Private labeling

- high quality label
- high quality packaging
- high quality printing
- high quality color

Solution:

 Show importers Egyptian capabilities & let importers drive the design

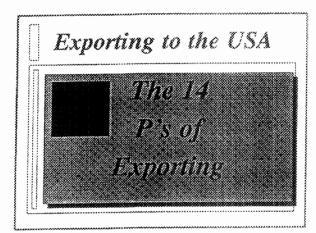

### Organic Opportunities 16 cos. sell \$73.3mm per annum Constraint:

 Intl. Accredited organic certification required in accordance with USA NOP

#### Solution:

 Read Vol. IV of USA IRA & visit the 4 accrediting agencies in Egypt

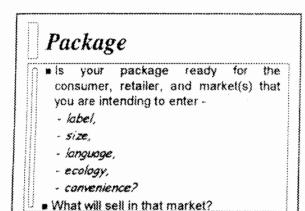

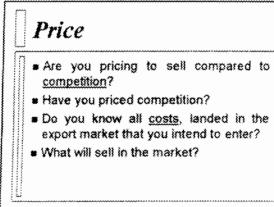

### Plan

- You must have a <u>marketing and</u> <u>business plan</u>.
- Define your strategy, timetable, costs, staff and money requirements, and long-term goals.
- This must have top management approval and commitment.
- Permanence must be perceived.

# Product

- Do you have a product(s) that is <u>market</u> ready - packaged and ready to sell?
- Is it acceptable to the market you intend to enter - taste, local habits, ethnic acceptance?
- Where will your product be purchased, or where will it be sold?

#### Abt Associates Inc

### Preparation

- Have you arranged for the appropriate inspections, sampling, stocks, lead times, and customs clearance?
- Are you <u>prepared to sell</u> in the export market?
- Have you selected a distributor or arranged for distribution?

# Preparation

- Have you considered a co-packer in the export country?
- Have you selected a broker or retained the representation you will need?
- . Is your product available?

# Perception

- How will your product be perceived by the customer, the buyer, the retailer, the distributor, the broker?
- <u>How will they</u> "see" if? Will their perception be what you intended it to be? (Value, Demand)
- What will it take to have them perceive, and accept the product?

### Placement

- Where will the product fit in the store?
- How many different departments and sections in the store will accept the product?
- Be sure you are talking with the appropriate buyer, distributor, broker
- Can your product be "tied-in" with other products and promotions?

### **Promotion Program**

- You must have a well thought out program of promotional activity to sell your product(s) in the introductory period, in the following weeks and months, and in year two and year three.
- The program must appeal to the distributor, broker, retailer, wholesale buyer, store owner, and customer.

## Proof

- You must test market your product, package, program, perception - and summarize the results.
- The results of your test marketing, and the necessary <u>changes</u> resulting from your test(s) become the proof that the product will sell - <u>document</u> your proof for the buyer.

#### Abt Associates Inc

### Performance

- Compile data on product sales, growth, profit dollars and income for retailers, brokers and distributors.
- <u>Results</u>. How the product performed becomes the basis for future sales.
- Tell everyone how they did, and how you plan to help them grow and profit with you in the future.

## Persistence

- Are you prepared to <u>continually call</u> on buyers, distributors, brokers, store owners, in-store customers - until you make the sale; to sell often & hard.
- Are you prepared to continue to <u>follow-up</u>, <u>follow-up</u>, <u>follow-up</u> - after the first sale? Whatever it takes....

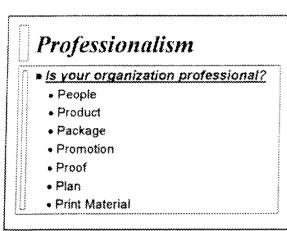

#### Perseverance

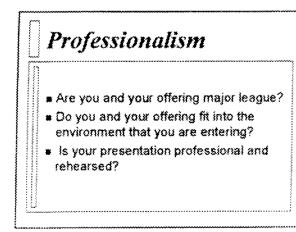

- Do you have the <u>staying power</u>... to commit to the effort?
  - Product inventory
  - Financing
  - People
  - Overcoming adversities and disappointments

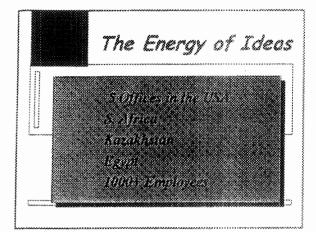

Ş

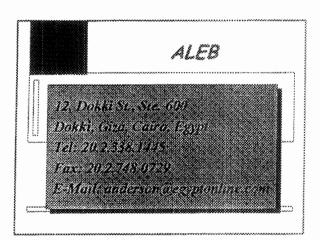

# People

- Are you committing enough of management and <u>staff time</u> to the export market?
- Do you have the people to maintain your ongoing business and this new segment of your business?
- Do you have the <u>right people</u>, the right distributor, the right broker?

Exporting to the USA

#### Excerpt from Findings of a Phase II Rapid Industry Analysis (IRA) of Trade, Market Trends and Opportunities in the United States of America, Volume I of IV

#### Herbs, Spices and Essential Oils

The demand for essential oils, herbs and spices is driven by numerous and varied enduses that make it difficult to simply define markets for all of the different products. For example, herbs are used for teas and supplements (ground or extracts), or added to processed foods for both flavor and perceived health benefits. Spices are processed for (1) retail sale to consumers, (2) food service to hotels, restaurants, and institutions, and (3) food manufacturing companies, to add flavor and in some case convey reputed health benefits (garlic is a prime example). Essential oils as food ingredients or flavors are an important product for the food industry, while the perfume industry relies on essential oils for toiletries and cosmetics.<sup>1</sup> The market for natural flavors from essential oils is growing due to concerns that synthetics pose some health risk.

Food processing companies find it advantageous to use essential oils as flavoring and coloring in their recipes. Essential oils derived from spices store much longer than dried spices. Oleoresins are the extracted, concentrated and standardized essential oils and non-volatile components of spices. Oleoresins have strong flavor characteristics and are usually available in paste or solid form. Oleoresins contain essential oils and other components such as fixed oils, pigments and natural antioxidants.

In the fragrance industry, lower cost synthetics are favored over natural oils—except for those essential oils that are either too difficult or too costly to copy synthetically. However, there is a trend toward natural cosmetics that is driving the demand by cosmetic companies for essential oils, botanical extracts, herbs and spices — and even products such as olive oil and fruit nectars.

#### 3.1 Current World Situation

The world market for herbs, spices and essential is growing, driven by consumer demand for more flavorful foods, the increase in the development of functional foods and beverages, and the overall growth in demand for natural products. Herb spices such as basil and oregano have witnessed strong growth as Italian dishes (pizza and sauces) have become widely popular both in households and restaurants. Chamomile use is increasing as it is blended with other herbal teas and it is used more in cosmetics as a natural ingredient. Essential oils are used in the food industry (including soft drinks) as flavoring, in the cosmetic industry for fragrances, in the pharmaceutical industry for its functional properties, and recently for aromatherapy, which is defined as the external application of essential oils for healing purposes, pleasure and the reduction of stress.

According to the International Trade Centre (ITC)/UNCTAD/WTO in their September 2000 report on *Global Spice Markets, IMPORTS, 1994-1998*, world trade in spices has increased from \$1.58 billion in 1994 to almost \$2.34 billion in 1998, a 48 percent increase over this 5-year period. According to the ITC report, the U.S. is the world's

X

<sup>&</sup>lt;sup>1</sup> Essential oils and essences are the volatile fraction of spices and other plant materials captured during distillation. Distillation is one of the major methods utilized in the industry to capture the flavor and characteristics of botanicals, and is used to make essential oils. Distillation is also the process used for the concentration of essential oils.

import market, increased from almost \$129 million in 1994 to \$191.3 million in 1998, a growth of 48.3 percent over this 5-year period. A short section of this ITC report is included as Table 22 in the Statistical Appendix of our report. The full report is available for purchase from the ITC.

The total market for flavors and fragrances (F&F) has been expanding at an average annual rate 5.7% for the last 20 years, based on various company sales estimates and company estimates of the size of the total world market, with estimates ranging from \$10.4 billion<sup>2</sup> to \$15 billion<sup>3</sup>. Table 23 in the Statistical Appendix of our report lists the top 10 world leaders in the flavor and fragrance industry and their company's sales over the 1998 through 2000 period. Table 24 in the Statistical Appendix to this report estimates that natural products and essential oils represented 15.7% of this total market in 1987.

These large multinational firms produce the majority of the high-volume materials for small producers that specialize in higher value-added, lower volume materials. The major products of this industry are essential oils, oleoresins, synthetic flavors and fragrances, and flavor and fragrance mixtures.

The primary consumers of these flavor and fragrance materials are perfume, cosmetic, and toiletry compounders. Often these firms are directly affiliated with the producer of the flavor and fragrance materials, as many major chemical and personal care products companies have acquired or developed subsidiaries for the specific purpose of having "in-house" suppliers. The chart below traces how the principal end-uses of flavors and fragrance products are derived:

| Table 3.1 | Flavor and Fragrance Materials: Principal Raw Materials, Producer |
|-----------|---|
|           | Types, Major Products, and Principal Uses                         |

| Principal Raw<br>Materials  | Producer Types            | Major Products                      | Principal Uses                          |
|-----------------------------|---------------------------|-------------------------------------|---|
| Plants Extracts             | Flavor Compounder         | Essential Oils                      | Perfumery Products                      |
| Synthetic organic chemicals | Perfumery and<br>Cosmetic | Oleoresins                          | Cosmetic and Other<br>Personal Products |
|                             | Companies                 | Synthetic Flavors<br>and Fragrances | Prepared Foods<br>and Beverages         |
| •                           |                           | Flavor and                          | and Develayes                           |
|                             |                           | Fragrance<br>Mixtures               |   |

<sup>&</sup>lt;sup>2</sup> According to a June 23, 2000, press release from IAL Consultants of the UK, the total world fragrance and flavor market was estimated at \$10.4 billion.

<sup>&</sup>lt;sup>3</sup> Universal Foods Company estimated the total F&F market at \$15 billion in their 1999 annual report.

Egypt is an important supplier of marjoram, which is used as a flavoring for sauces and meats and is very similar botanically to oregano. Egypt supplies 10 percent of US imports of dill. There are two components of dill: dill seed, and the tops of the plant, which are referred to as dill weed. The pickle industry is the largest user of dill - primarily dill-weed oil.

# Table 3.6. U.S. Imports of Herbal Teas, by Major Countries of Origin, CY 1998 – 2000, Quantity and Value

Sources: FAS/USDA; U.S. Bureau of the Census; and USA Trade Online. Includes USHTS categories: 1211904020 Mint Leaves Fresh/Dried As Herbal Teas & Herbal Infusions; 1211908080 Plants & Parts Excluding Mint Leaves Used As Herbal Teas; 2106909987 Herbal Teas/Infusions of Mixed Herbs, Nesoi

U.S. imports of essential oils fell 2.9 percent in CY 2000 to \$308.9 million CIF value, while tonnage declined 5.1 percent to 36,563 MT. Over the past six years, U.S. imports have ranged from \$348.5 million CIF in CY 1995 to the \$308.9 million CIF last year, averaging about \$327.5 million CIF value over this period. Major suppliers of essential oils during CY 2000 were: (1) France (\$46 million); (2) Argentina (\$33.8 million); (3) Brazil (\$24.6 million); (4) China (\$24.4 million); (5) Canada (\$20.1 million); (6) Mexico (\$18.2 million); (7) Indonesia (\$17 million); (8) UK (\$15 million); (9) India (\$14.6 million); and (10) Germany (\$11.4 million).

Table 30 in the Statistical Appendix to this report details U.S. essential oil imports by country of origin over calendar years 1995 – 2000.

As detailed in the table below (overleaf), the U.S. demand for plant-derived chemicals, including natural flavor and fragrance materials was estimated at \$1.89 billion in 1996, of which \$625 million were essential oils and \$560 million botanical extracts, with 5-year annual growth rates of 6.1 percent and 15.9 percent annually. Major essential oils produced in the U.S include mint oils and cedarwood oil, and particularly citrus oils, which are considered to be by-products by U.S. citrus fruit and juice producers. However, demand for citrus and mint oils of different qualities is significant as domestic supply is not sufficient. Many essential oils are imported because they are not available domestically and the U.S. duty level for a most essential oils is therefore free.

| Plants & Parts Ex Mint Leaves Used As Herbal Teas (1211908080)     | 37.5% |
|--|-------|
| Essential Oils of Citrus Fruit, Nesoi (3301195000)                 | 68.0% |
| Essential Oils of Cassia (3301295007)                              | 18.0% |
| Essential Oils Excluding Those of Citrus Fruit, Nesoi (3301295050) | 15.5% |

As noted above, U.S. imports of other citrus essential oils from Egypt increased 68 percent in CY 2000, and we believe there is potential for additional growth in Egyptian exports of citrus oils to the U.S. market. The U.S. is at once a major producer and importer of citrus oils, used as a flavor ingredient in soft drinks, prepared foods, confectionery products and perfume. An important new development is the use of citrus oils as an environmentally safe replacement for petrochemicals in such items as paints and household cleaners.

Even though the U.S. is a major producer, imports are significant because they are usually priced lower and they are often blended with domestic oils for both the domestic and export markets. Orange is the most important citrus flavor accounting for half of the U.S. market, followed by lemon with a third of the total, lemon-lime mixes representing 10% of the total, and lime alone accounting for 5%. Grapefruit, clementine and mandarin and mixtures of the three make up most of the balance. Import competition is heavy from both Europe and South America (Brazil is a major exporter of orange oil and sells nearly 10,000 MT a year to the U.S.). Imports of lemon oil into the U.S. have increased by about 17%, and Argentina supplies over half of the U.S. lemon oil imports, followed by Italy, Brazil, Spain and Uruguay accounting for most of the remainder. The principal markets for exports from the U.S. are to China, Japan, U.K. and Canada.

Egypt is also an important supplier of geranium oil for the fragrance industry and has the potential to increase exports of this essential oil and other fragrance oils such as jasmine.

During the period of this scope of work, we contacted 245 importers of herbs, spices and essential oils. Some of these companies import all three of these products, while others concentrate on just one or two of these products. Out of the total of 245 importers, following are the number of those involved in importing each of these products groups, and the number of these import companies that expressed an interest in being contacted by our Egyptian exporters with offers and product samples.

The total number of importers involved in essential oils that were contacted were 55, and 8 of these expressed an interested in developing new market linkages:

- Camden-Gray Essential Oils
- Health Concerns
- Leeward Resources, Inc.
- Liberty Natural Products, Inc.
- IFF
- Bell Flavors & Fragrances Inc.
- Sarcom Inc.

- Stan-Mark Food Products, Inc.
- Weaver Nut Co.
- KHL Flavors, Inc.

Another company, Whole Herb Co., which imports herbs, spices and essential oils stated that they were already "well connected" with our exporters of these products, and that they are already importing these products from some of our suppliers.

These importers, as well as the many other companies that have yet to respond to our inquiries, can be contacted using our updated and expanded lists of North American importers of essential oils, North American importers of herbs, and North American importers of spices, all of which are attached as Technical Appendices to this report.

The above-identified importers expressed interest in almost all of the herb, spice and essential oils products included in our trade survey from the list of available products offered by our Egyptian exporters, as highlighted in Technical Appendix 7 of this report.

In conclusion, it is believed that there exists good potential for further increasing Egyptian exports of herb, spice and essential oil products to the U.S. market. It is recommended that our recent efforts be continued, both here in the U.S. and through assisting our exporters on the ground in Egypt, to use the interest expressed by the 18 U.S. importers to build new business relationships and market linkages leading to increased export sales. Efforts should also continue to further explore possibilities with the other 213 U.S. and Canadian companies identified as importing herb, spice and essential oil products to build their interest in Egyptian products, too. We further recommend that ALEB host seminars for these importers here in the U.S. to further develop this growing export business. This could be done, for instance, during an upcoming visit to the U.S. in conjunction with attending one of the major trade show events, as long as the group also includes a good representation of herb, spice and essential oil products exporters.

To further assist in this effort to expand exports of Egyptian herb, spice and essential oil products, we are including the following additional information:

- Table 31 in the Statistical Appendix to this report: A time series of monthly New York spot prices for many herbs and spices for the five-year period 1996 through 2000, developed by one of the importers on our list, A.A. Sayia & Company, Inc.
- Appendix 8 in the Technical Appendix to this report: Using information from A.A. Sayia & Company, Inc. and another importer, Polarome International, we developed a WORLD CROP CALENDAR depicting when all major herbs, spices and botanicals are available from all major origins.
