

Why MPMS?

USAID Missions have made numerous requests for an information system to support the planning, management, monitoring and reporting efforts associated with the portfolio of projects they lead to deliver the Agency's goals. A critical part of the Missions' request is a solution that will streamline the inefficient reporting processes associated with responding to the significant number of requests received each week for project status and results. The Mission Portfolio Management System (MPMS) is intended to provide Mission-specific tools to streamline reporting and introduce much-needed efficiencies to the project portfolio management processes for USAID Missions.

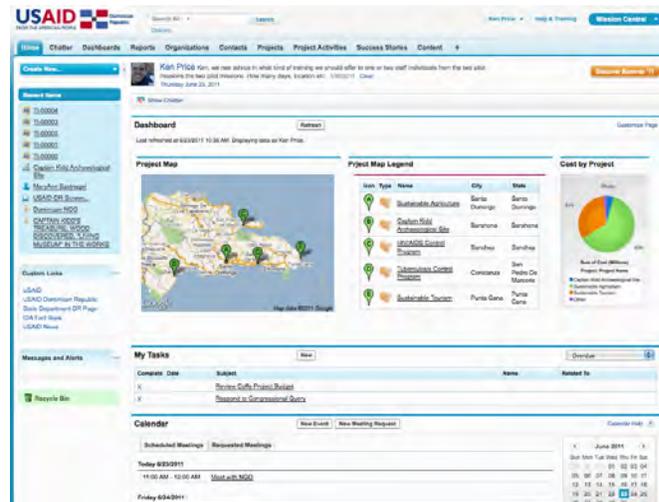

MPMS is unique in that it:

- Is designed from the Mission perspective.
- Will be configured to fulfill requirements of each Mission, while supporting cross-Mission baseline data needs.
- Supports linkage of Mission project results to strategic goals and investments.
- Enables simple capture of Mission-specific project and activity data including indicators, beneficiaries, and locations.
- Supports mapping and display of project data to geographic locations via mapping tools.
- Provides a secure, mobile portal for Partners to input project information, including data updates, status and results.
- Enables sharing of knowledge between and among Missions and supports continuity of operations with AOTR/COTR mobility.

MPMS Key Features

- Mission-level Project and Activity management and monitoring, including real-time status of project Indicators, Beneficiaries, and other frameworks.
- On-demand, easy-to-use Reporting tools for producing graphical dashboards, scorecards and text-based reports, based on Mission-defined criteria; plus canned reports.
- Mapping of Project and Activity data to user-specified locations via a geographic "point & click" interface.
- Supports the Agency's "Results Framework" principles.
- Provides Facebook-like collaboration features to support team-based project efforts, capture.
- Enables easy capture, storage and retrieval of project documentation, including photos, videos and digital media.
- Provides secure User access via mobile devices, including iPhones, iPads and laptops.
- Enables Mission-wide information availability for improved decision making, communication, and staffing changes.

The MPMS Technology Solution

- Cloud-based technology solution based on the Force.com platform.
- Eliminates the need for special hardware & software at the Mission.
- Backups and upgrades done automatically "in the Cloud".
- Supports User & Partner access from anywhere!

MPMS is an initiative of the Knowledge Management division of the Office of the Chief Information Officer (CIO/KM). For more information on MPMS, contact Joe Gueron at JGueron@usaid.gov, David Santiago at DSantiago@usaid.gov, or Ryan Jacobs at RJacobs@usaid.gov. CIO/KM welcomes your comments / questions and suggestions.
