# BACKGROUND

## INTRODUCTION

The Federal Ministry of Health and Human Services Nigeria Family Planning Services Project (FHS) have worked together over the last five years to develop a system to collect family planning data from public sector service delivery sites around the nation. The system of data flow is from the village/service delivery site level to the local government area to the state and federal levels. Through the monthly reports that flow up the system from SDP to FMOH in Lagos and through special teams of government, FHS and consultants that visit delinquent data-generation sites around the country, it has been possible to collect the returns of up to 70 percent of public sector service delivery sites providing family planning.

The present report provides the family planning results for 1992 of public sector services delivery sites. 1991 data is also provided for comparison. Data is aggregated at the national, zonal (primary health care zone), and state levels. It should be noted, however, that due to the creation of new states in late 1991, it may not be possible to compare 1992 figures with 1991 in some states.

The profiles have been prepared using a software package, developed by FHS for the FMOH.

The purpose of these family planning data profiles is to provide policy makers at the federal, state and LGA levels with information on the progress made in family planning service delivery over the past year. The data show changes in contraceptive use, number of new acceptors, number of revisits by clients, changes in method mix, and changes in active states that are reporting data. This information should be useful in helping policy makers and program managers decide on strategies to increase contraceptive use and reporting.

# NATIONAL PROFILE

## A ZONE

Abia State  
Akwa Ibom State  
Anambra State  
Benue State  
Cross River  
Enugu State

## TABLES, CHARTS AND GRAPHS IN THE PROFILES

Each profile has the following:

**Nicare Executive Summary:**

These tables provide annual summary of family planning service data generated by a special soft-ware package (Nicare). This edition contains 1991, 1992 client statistics for comparison purposes.

**Contraceptive Method Mix:**

The pie charts are used to illustrate the contraceptive Method Mix. The percentages are obtained by dividing each method user summary with the total user summary in a year.

**New Acceptors and Revisits:**

The bar charts demonstrate the monthly new acceptors and revisits Data. Showing the trend from 1991 to 1992.

**Referral Sources for New Acceptors:**

The referral codes used in the charts are as indicated below.

CP = Clinic/Program Personnel  
 OP = Program Outreach Personnel  
 RD = Radio  
 TV = Television  
 PM = Print Media  
 FR = Friend, Relative  
 NH = Non Health Worker  
 CT = CBD\TBA\VHW  
 OT = Other  
 NR = No Response

**CYP:**

This was calculated using the USAID Committee's recommendation on CYP .

**WRA:**

The value used in this publication is based on projection from the 1991 census figures using a growth rate of 3%.

The data illustrations are arranged by National, Zonal, and State aggregate profiles.
