About the presentation

- This presentation was prepared for USAID's Worldwide Education and Training Workshop, Arlington, Virginia, August 17-21, 2009. The workshop was organized by the Bureau for Economic Growth, Agriculture and Trade (EGAT/ED). The purpose was for "the international development community to share best practices in addressing the growing challenges in the field of education for social and economic development."
- The Early Grade Reading Assessment (EGRA) described in this presentation is being developed under the USAID EdData II project led by RTI International, Task Order 3, EHC-E-03-04-00004-00.

Outline

1. Rationale
2. Development
3. Pilot testing
4. Results and implications

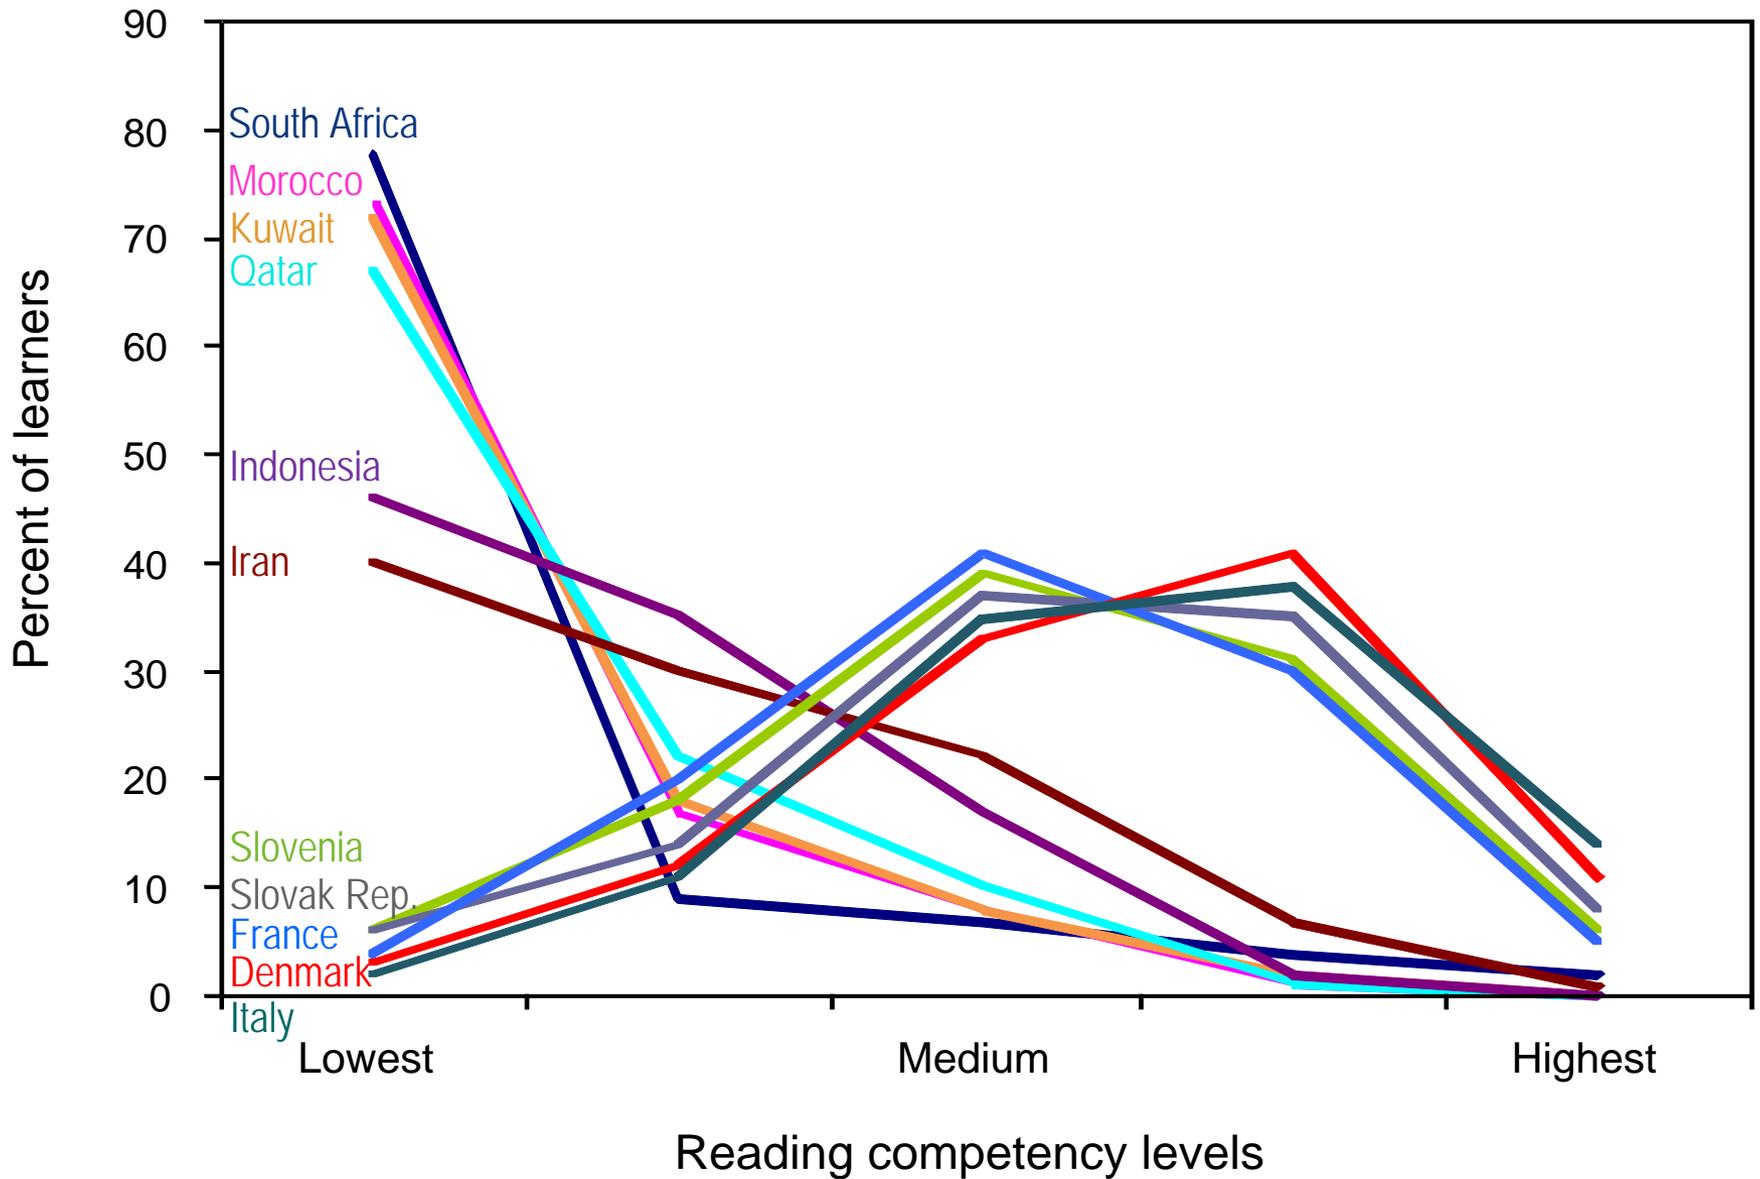

Outline

1. Rationale
2. Development
3. Pilot testing
4. Results and implications

Quality issues

- What are the big international goals?
- How do low-income countries compare to high-income countries?
 - LI to HI ratio
 - Gross primary enrollment: 95%
 - Net primary enrollment: 80%
 - Gender parity net enrollment rate (NER): 94%
 - Completion: 58%
 - Learning achievement: Median LI = 3rd percentile of HI or lower

PIRLS 2006 Results

Why focus on early grade reading?

Early Grade

+

Reading =

- intervene early,
- intervene on reading,
- have some way to assess orally

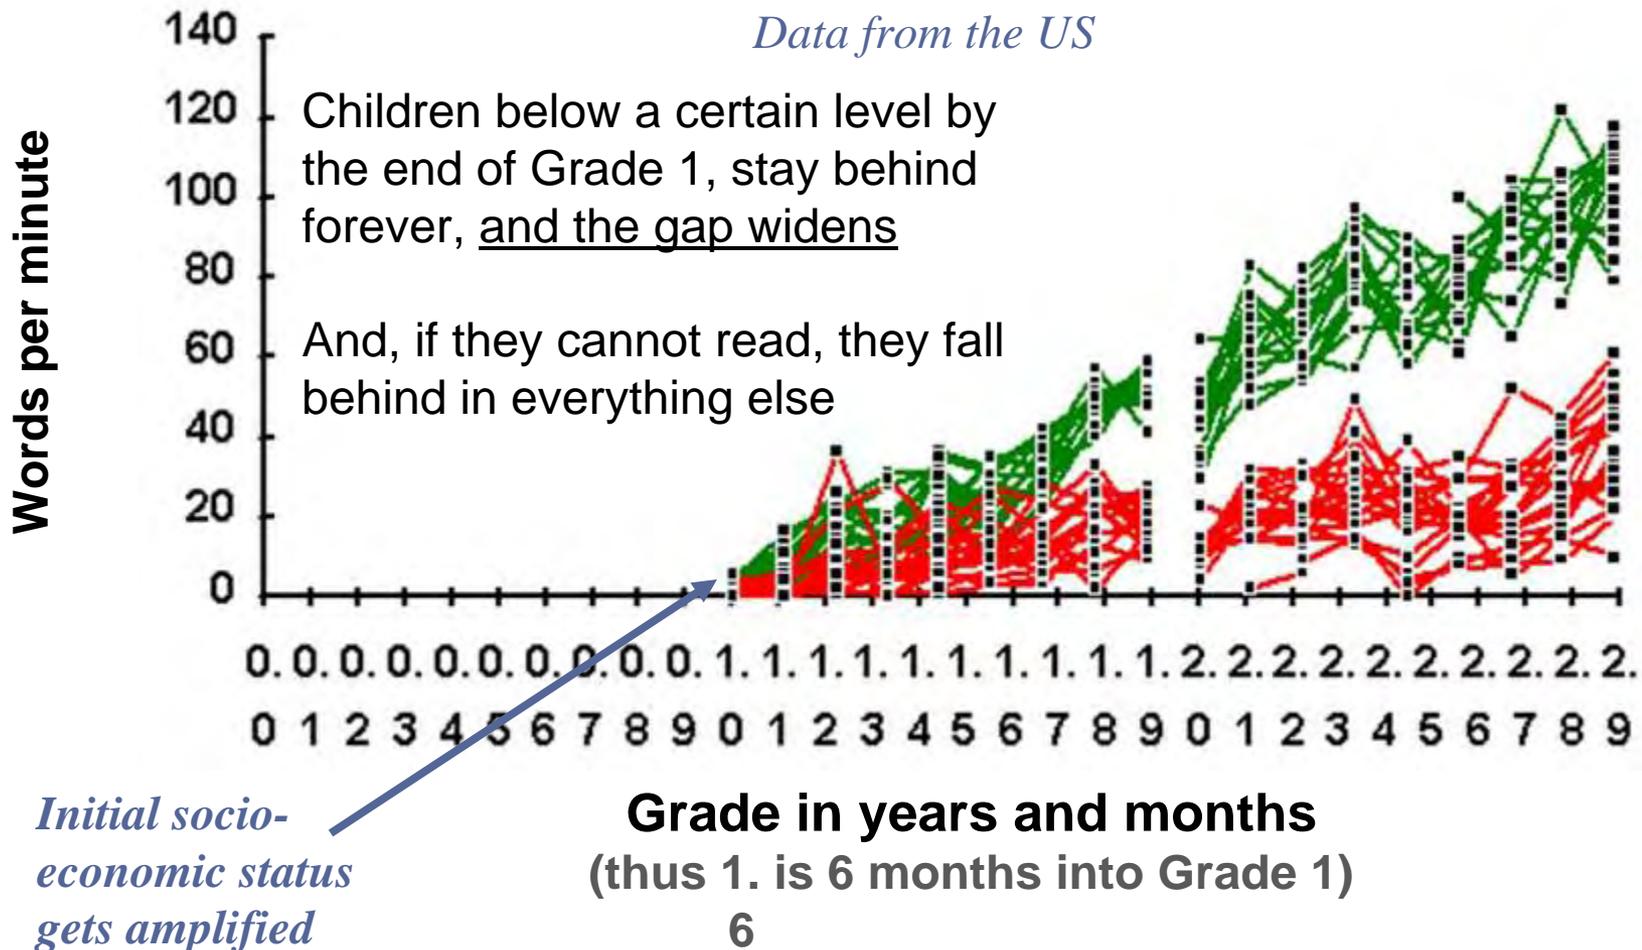

Let's see if we can motivate those conclusions

Why early?

“For unto every one that hath shall be given, and he shall have abundance: but from him that hath not shall be taken away even that which he hath.”

Matthew Effect?

Why early? Matthew Effect in reading

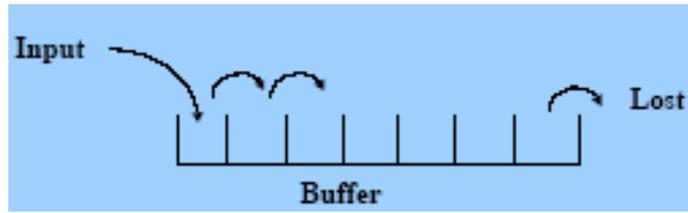

Why reading?

- No, it is not “the only thing that matters”
- But it is a good one to start with
 - It is a (***the***?) foundational skill -
Hard to imagine anything else going well if children can't read well and soon
 - It can be used as a marker -
Hard to imagine a good school that can't teach children to read; if children are not reading, the school (district, country) needs serious help

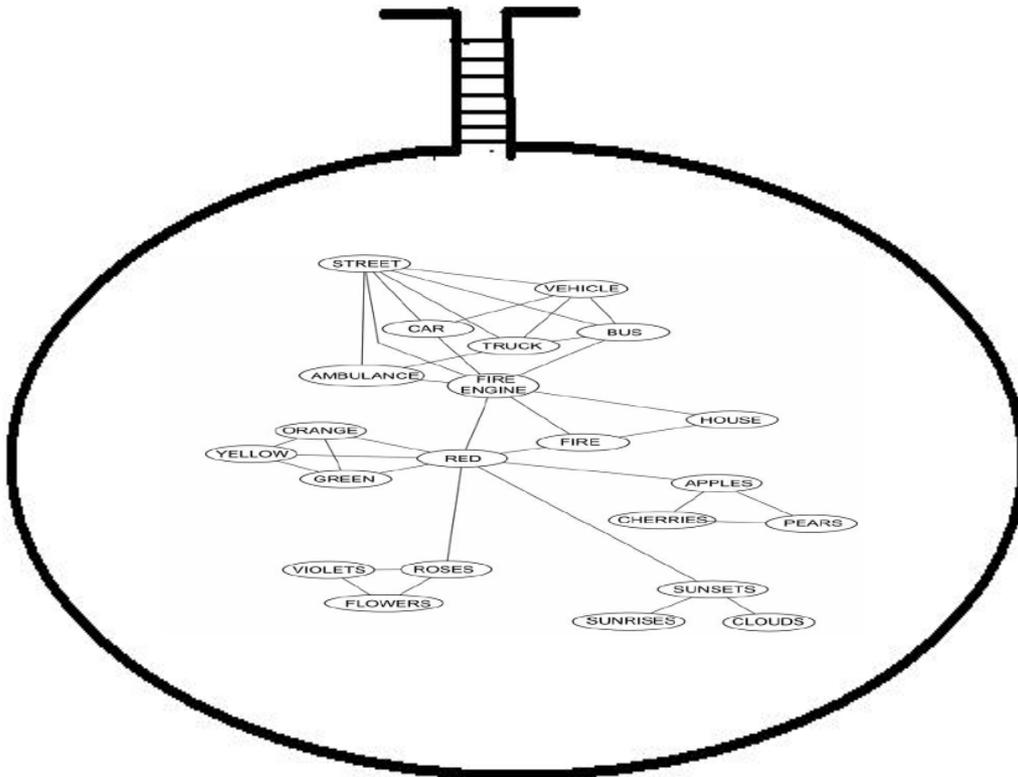

Why oral reading?

- Oral reading seems to be good predictor (see literature)
- Students frequently bottom out (floor-effect problems) on paper-and-pencil tests
- Elements of oral reading are in accord with curricular frameworks but frequently there are no specific (teacher-level) guidelines ON how to assess

Why timed oral reading?

- From brain research we know short-term memory is crucial for reading comprehension
- Short-term memory can hold about 7 items for 12 seconds
- Fluency and accuracy are related to comprehension

Oral reading predictive power

Examples:

- Wilson (2005): 0.74 correlation between oral reading measures and broader cognitive achievement in Arizona.
- Fuchs, Fuchs, Hosp, & Jenkins (2001): survey and explain the rather high correlations between oral reading fluency (ORF) and a large variety of other tests.
- Vander Meer, Lentz, & Sorrels (2005): 96% of children judged to be at risk using oral reading turned out to be “nonproficient” in the Ohio’s more comprehensive test, while of those classified as “low risk” using oral reading fluency, 72% were classified as proficient using a more comprehensive test.
- Shaw & Shaw (2002): found similar results for the relationship between simple measures of oral fluency and deeper state-wide measures of reading in Colorado.
- Fuchs, Fuchs, & Maxwell (1988): correlation of 0.91 between oral reading fluency and other comprehensive tests.

Oral reading predictive power (*cont'd*)

- Juel (1988): “The probability of remaining a poor reader at the end of fourth grade, given a child was a poor reader at the end of first grade, was .88 the probability of remaining an average reader in fourth grade, given an average reading ability in first grade, was .87.”
- Schilling, Carlisle, Scott, & Zeng (2007): 80% of at-risk with ORF turned out to be in bottom quartile with Michigan’s own reading test at end of grade.
- Wood (2006): found significant correlations between oral reading fluency and later curriculum-based tests, and found that oral reading fluency adds explanatory value even when other factors are considered.
- Some of these recommend adding comprehension and vocabulary (EGRA does comprehension, not vocabulary), but ORF by itself does a pretty good job.

Outline

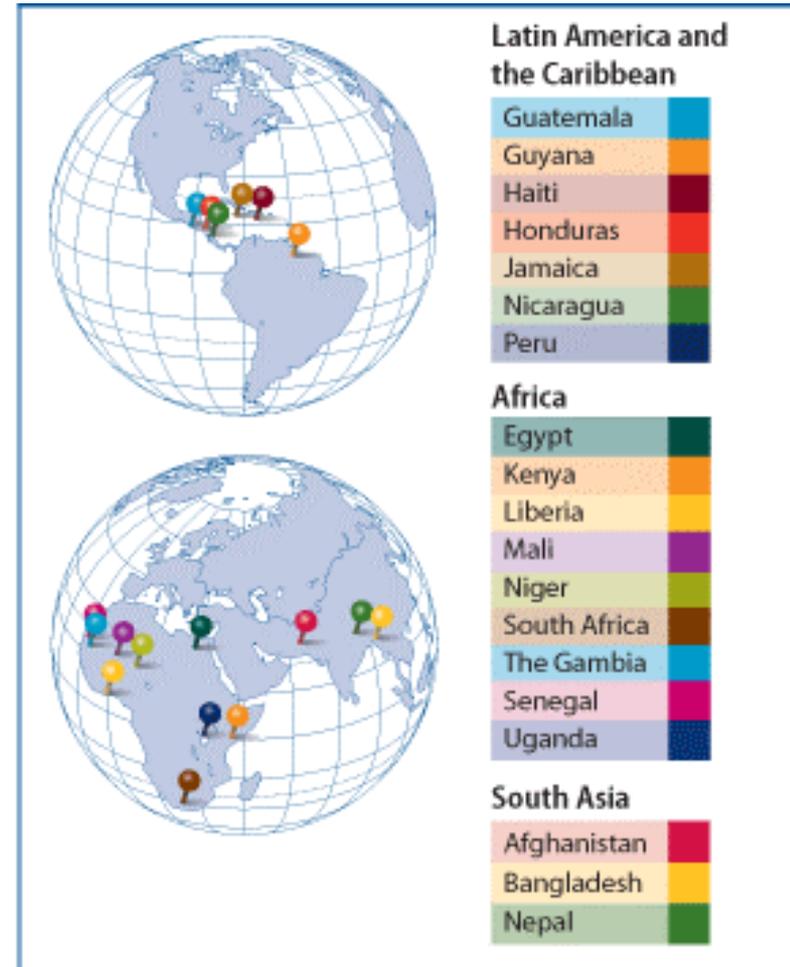

1. Rationale
2. Development
3. Pilot testing
4. Results and implications

Development thus far

- “Organic” process: meets “market test” at each step
- First: informal, small samples, see if it was useful at generating awareness, very little funding
- Attention attracted, community of practice involved
- Some funding to try it a bit more formally
 - USAID funding: validate efforts thus far with expert opinion, try some more applications
 - Call high-level experts meeting, experts validate, suggest increased formality, seriousness of trials
 - World Bank adds some funding, try it in two more international languages, local languages

Development thus far: Gaining momentum

- World Bank financed in 7 countries; USAID in 7 more and growing
- March 2008 workshop: 200 participants from 40 countries
- Colleagues from AED, AIR, Save, IRC, BRAC, Plan, Pratham (and others?) experimenting with EGRA
- 2009 Hewlett Foundation support for work in 10 languages in four countries

Instrument Component	Early Reading Skill	Skill demonstrated by students' ability to:
1. Engagement and Relationship to Print	Orientation to print	Indicate where to begin reading (uppermost left corner)
		Indicate direction of reading within a line (left to right)
		Indicate direction of reading within a page (top to bottom)
2. Letter Naming	Letter recognition	Provide the name of upper- and lower-case letters distributed in random order
3. Phoneme Segmentation	Phonemic awareness	Segment words into 2 to 5 phonemes, counting of phonemes within words
4. Familiar Word Reading	Word reading	Read simple and common one and two syllable words
5. Nonsense Word Decoding	Alphabetic principle	Make grapheme-phoneme correspondences (GPCs) through the reading of simple nonsense words
6. Paragraph Reading and Comprehension Questions	Oral reading fluency	Read a text with little effort and at a sufficient rate
	Reading comprehension	Respond correctly to different type of questions (literal with options, literal and inferential) about they text they have read
7. Listening Comprehension	Listening comprehension	Respond correctly to different type of questions (literal with options, literal and inferential) about they text the enumerator reads to them
8. Dictation	Alphabetic principle	Write, spell and use grammar properly through a dictation exercise

Other characteristics

- Many segments timed to 1 minute
 - Meant to measure fluency (critical skill), also more humane, and also more efficient – whole test can be done in less than 15 minutes
- Can be done on sample basis; easy to score
- Can provide essentially instant results for a village (Pratham in India, UWEZO in East Africa)
- Applied by trained assessor (or teacher), one-on-one, not pencil-and-paper in whole class

Outline

1. Rationale
2. Development
3. Pilot testing
4. Results and implications

Language pilot results

Language(s)	Grades	Schools	Students
English	1, 2, 3	40	1200
French	1, 2, 3	36	501
Wolof	1, 3	36	186
Spanish	1, 2, 3	41	1924
Miskitu	1, 2, 3	6	282
Arabic	1, 2, 3	3	95

Summary of EGRA results: English

- At standard of 45 correct words per minute (cwpm) for paragraph reading, percent of tested students who “can read”:
 - Grade 1: 1.4%
 - Grade 2: 2.6%
 - Grade 3: 6.1%
 - All had at least 92% comprehension

Summary of EGRA results: French and Wolof

- At standard of 45 cwpm for paragraph reading, percent of tested students who “can read”:
 - Grade 2 French: 11%
 - Grade 3 French: 48%
 - Grade 3 Wolof: 28%
 - All had at least 70% comprehension

Summary of EGRA results: Spanish

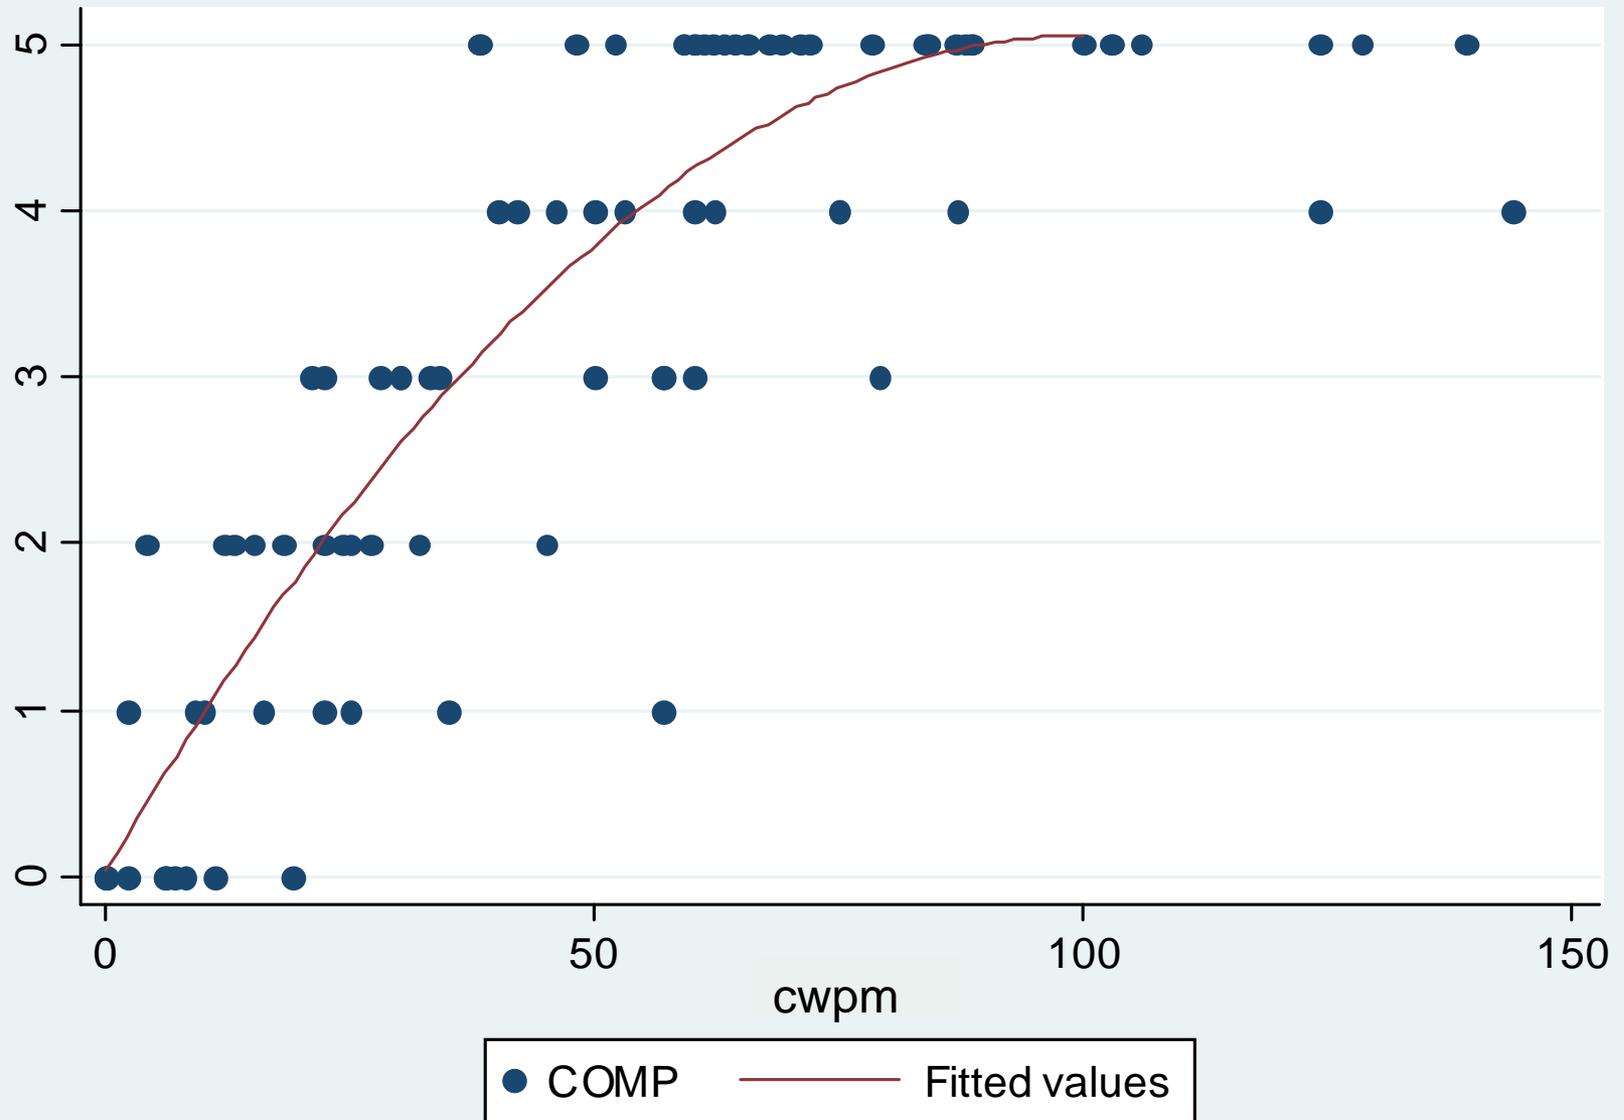

- At standard of 60 cwpm for paragraph reading, percent of tested students who “can read” in Spanish:
 - Grade 1: 17%
 - Grade 2: 60%
 - Grade 3: 85%
 - All had at least 87% comprehension

Summary of EGRA results: Arabic

- At standard of 45 cwpm for paragraph reading, percent of tested students who “can read” in Arabic:
 - Grade 1 : 12%
 - Grade 2 : 41%
 - Grade 3 : 80%
 - All had at least 80% (90% for Grades 2 and 3) comprehension

Typical relationship between fluency and comprehension

Floor-effect issues

- Large number of zero scores (higher in those without mother-tongue instruction and/or access to print)

- French: 23%

- Wolof: 36%

- English: 65%

- Spanish: 9%

- Miskitu: 37%

- Arabic: 3%

Outline

1. Rationale
2. Development
3. Pilot testing
4. Results and implications

Results: Reliability and validity

- Reliability—Accuracy and internal consistency
 - Cronbach's alpha: Fr=0.90, Eng=0.87, Sp=0.84, Arabic=0.94
- Validity—Ability of a measure to report outcomes we know to be true
 - Face: Policy makers, parents view EGRA as related to their “sense” of reading
 - Concurrent/External: Requires external measure
 - Predictive: Requires longitudinal data, multiple measures
- Item response theory (IRT) analysis of letters, words, etc., as items

Results: Refining the tool

- Large range on results (e.g. min/max 2 to 120) (good lessons for discussing implications of large standard deviations [SDs])
- Good reliability (alpha= ranging from 0.84 to 0.94)
- Tool discriminates well between performers; showing good grade progression results
- Some (expected) need for refinements; experimentation with new subtests
- Harder than it looks (e.g., lack of word frequency lists in Wolof, Bangla, Miskitu, etc.)
- Arabic pretest demonstrates that principles of alphabetic languages apply even to non-Latin scripts

Possible uses for programming

- Policy awareness and motivation
 - Macro
 - Community-based
- Impact tracking and evaluation
 - Project monitoring
 - Project impact and evaluation
 - System monitoring over time
- Teacher-based assessment
 - Link to community-based awareness, accountability
 - Motivating and driving instructional practice
 - Already being used that way in various countries

Sample uses to date

- Peru: generated national debate and a presidential pledge to have all children reading by the end of grade 2;
- The Gambia: government revamped approaches to teacher professional development to focus on the early grades and begin introduction of mother-tongue instruction;
- Mali: renewed focus on providing quality teacher professional development and instructional materials in local languages;

Sample uses to date (*cont'd*)

- Haiti: the ministry is training teachers in early literacy instruction based on the results of the EGRA instrument;
- Liberia: spurred development of reading intervention programs and continuous monitoring by teachers;
- Nicaragua and Honduras: ministry has requested additional training seminars in teacher use of the tool for continuous assessment;

Sample uses to date (*cont'd*)

- Jamaica, Egypt, Kenya and Uganda: ministries are exploring additional use of the tool beyond the project to complement their existing assessment systems;
- South Africa, the Department for Education is using EGRA on their own to assess mother tongue instruction in several languages.
