Be Well, Teach Well:
A Locally Defined and Participatory Approach to Measuring Teacher Well-being

65th Annual Meeting of the CIES
Research Consortium:
Nikhit D’Sa, Global Center for the Development of the Whole Child
Mónica Fontana, Save the Children
Emily Richardson, Luigi Giussani Institute of Higher Education
Outline

1. Brief rationale of the study
2. Scope and overview: phase 1
3. Process followed in collecting and analysing data
4. Preliminary and selected findings
5. Conclusions and prospective
Why teacher wellbeing?

• Teacher wellbeing (TW) refers to how teachers feel and function in their jobs, including their affections, attitudes, and evaluations of their work (Falk, Varni, Finder, & Frisoli, 2019).

• There is a significant relationship between teacher wellbeing and student wellbeing and learning (Jennings et al., 2017; McCallum et al., 2017; Colvin, 2018).

• TW affects the quality of their instruction, their ability to form meaningful relationships with students, and their capacity to create an inclusive classroom climate (Jennings, 2016; McCallum et al., 2017; Greenberg, Brown, & Abenavoli, 2016).

• TW also has a positive relationship with teachers’ own social and emotional competence (Falk, Varni, Finder, & Frisoli, 2019).
Relevance of the study

• **Limited studies** are available on context-specific understanding of teacher wellbeing in Uganda.

• TISSA (Teacher Initiatives in sub-Saharan countries) report for Uganda: teachers reported **high rate of work-dissatisfaction and anxiety**.

• MoES through the **National Teacher Policy** has significant interest in: (a) professionalization of teaching profession, (b) increase in teacher productivity, and (c) increase in teacher retention and wellbeing.
Scope

Responding to the gap in the research on teacher wellbeing, our consortium has been working with diverse representation of primary school teachers (Primary 1-Primary 7) from settlement and non-settlement schools across Uganda to:

1. Understand their perspective of wellbeing and the factors that support and hinder that wellbeing
2. Create and validate a contextually appropriate teacher wellbeing measurement tool
3. Share our learnings (on process and findings) within and outside Uganda
Overview of the Phases

**Phase 1**
- Brief *ethnographic interview*
- 150 teachers
- 5 research sites (Lamwo (Palabek), Kamwenge (Rwamwanja), Kampala, Moroto, Wakiso)

**Phase 2**
- *Teacher Research Group* (TRG)--10 teachers
- Review Phase 1 findings, 2-3 months of participant observation research, co-develop item bank

**Phase 3**
- Pilot test of *survey* with 300 teachers: 60/research site
- Psychometric analysis: validity and reliability

Research Translation

---

Delivering practical, research-driven solutions to global development challenges
Research Questions: Phase 1
How do primary school teachers in settlement and non-settlement schools understand and define well-being?

* What constructs do they prioritize?
* Which support systems do they believe enhance teacher wellbeing?
* What gender differences emerge?
Sample Characteristics

N = 148 primary teachers
49% female
51% male

Age of the teachers participants (frequency)

- 22-27: 29
- 28-33: 61
- 34-39: 27
- 40-45: 14
- 46-51: 10
- 52-57: 6

Type of School

- Private day school 43%
- Government day school 37%
- Private day & boarding school 8%
- Government day & boarding school 12%
Instrument: Semi-structured Interview

• A & B Sociodemographic Information: Location and teacher background
• C. Reference teacher 1 of 2
• D. Reference teacher 2 of 2
• E. Definition of Wellbeing

Think of a teacher that you know who teaches in primary school and is doing well. He/she does not have to have a perfect life, he/she just has to be doing well. You don’t have to tell me their name. Take a moment to think about that person

Male / Female
Age
Skills, attitudes, characteristics, training, people, etc. that help this teacher in doing well

Select 5 things and rank it
1. Free-line-by-line coding of primary interviews, including sentences or paragraphs as the analysis unit.

2. Organization of these “free codes” into related areas to construct “descriptive” themes.

3. Development of “analytical” themes = additional concepts, understanding, hypothesis of the data.

Open Coding and Synthetic Analysis (Thomas & Harden, 2008)

Thematic Codes

INTRINSIC MOTIVATION

Definition: Teacher displays an affinity/love for or positive attitude toward teaching, the school, or the learners. This affinity and positive attitude is claimed to help the teacher do better in their job because they are more likely to be motivated to prepare for class, be on time, or find avenues to further their learning.

Example of excerpt: "She is intrinsically motivated. For example, she takes learners outside the class to do general cleaning without being instructed. She also organizes the class. She involves herself in the play activities with the learners".

Dimensions:
1. Passion for the job (teaching)
2. Self-driven

Frequency of “intrinsic motivation” by district and gender:

- Lamwo: 22 males, 14 females
- Kamwenge: 11 males, 11 females
- Kampala: 13 males, 8 females
- Moroto: 9 males, 6 females
- Wakiso: 10 males, 7 females
Phase 1: Thematic Codes

<tr>
<th>PEER COLLABORATION</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Definition</strong></td>
<td>The act of “working hand in hand” and sharing with other teachers. It is described as collaboration, good relationships, teamwork, and positive interaction. Includes: helping others and the benefit of working and being advised by colleagues.</td>
</tr>
<tr>
<td><strong>Example of excerpt</strong></td>
<td>“He relates with others in way that he cooperates with others he likes to work in a team work in that way he is able to share knowledge with other fellow teachers”</td>
</tr>
</tbody>
</table>
| **Dimensions**              | 1. Sharing knowledge and resources with peers.  
                               2. Receiving help from other; peers, community, etc. |

**Code-occurrence:** Friendly /sociable  
Guidance / Counselling

**Frequency of “peer collaboration” by district**

- Lamwo: 38
- Kamwenge: 31
- Kampala: 35
- Moroto: 42
- Wakiso: 40

**Frequency of “Peer collaboration” by gender**

- Male: 91
- Female: 89
Thematic Codes

### CLASSROOM METHODS

#### Definition
The approaches, skills, tools and methods that make the teacher good at teaching. Particular attention is paid to pupils with "disabilities" or "low learning pupils" as well as the ability to use the environment resources as part of the teaching methods.

#### Example of excerpt
“He also uses better methods of teaching like group works. And he also explains well to the pupils. He is good at using the environment that is the use of real instructions materials or learning aids in teaching in way that he uses concrete materials that is tangible one the ones one can touch for example he handles science as a discipline that is roots of pants”

#### Dimensions
- **Teaching methods:** learner-centred, use of environment materials, put examples, storytelling, group discussion, teamwork, etc.
- **Teaching skills:** explains well, adapted communication skills, classroom organization, good assessment, etc. Personal skills that help in teaching: self-esteem, interpersonal skills, etc.

### Frequency of excerpts for Teaching methods/skills

Frequency of excerpts for Teaching methods/skills:

- **Lamwo:** 21
- **Kamwenge:** 36
- **Kampala:** 19
- **Moroto:** 22
- **Wakiso:** 23

### Co-Occurrence:

</table>

Conditions and attitudes affected by economic status and external support, but also by individual skills (how to face challenges), intrinsic motivation and working together with peers.
Preliminary Conclusions

- Most of the responses reported during the interviews refer to support systems or factors that enhances teacher wellbeing more than the construct in defining teacher wellbeing itself.
- Few gender differences were found in the identification of support systems or components of teacher wellbeing.
- Some gender differences were found in the last question about the definition of wellbeing:
  - Female: Health, holistic health
  - Male: Support from administration, economic status
- Wellbeing and its support systems are culturally sensitive: differences obtained by districts (refugee and non refugee settlement / rural and urban) and differences from the global literature.
- Participants prioritized the process, methods and skills in teacher wellbeing (Classroom methods, prepared, training), as well as the power of the intrinsic motivation and belonging to a learning community (peer cooperation).
