USAID | DELIVER PROJECT, Task Order 1

The USAID | DELIVER PROJECT, Task Order 1, is funded by the U.S. Agency for International Development under contract no. GPO-I-01-06-00007-00, beginning September 29, 2006. HIV-related activities of Task Order 1 are supported by the President's Emergency Plan for AIDS Relief. Task Order 1 is implemented by John Snow, Inc., in collaboration with PATH, Crown Agents Consultancy, Inc., Abt Associates, Fuel Logistics Group (Pty) Ltd., UPS Supply Chain Solutions, Family Health International, The Manoff Group, and 3i Infotech. The project improves essential health commodity supply chains by strengthening logistics management information systems, streamlining distribution systems, identifying financial resources for procurement and supply chain operations, and enhancing forecasting and procurement planning. The project also encourages policymakers and donors to support logistics as a critical factor in the overall success of their health care mandates.

KIT CONTENTS
• The 25 test kit contains 25 foil pouches, 25 Specimen Collection Loops, 25 Specimen Dilution Tubes.
• The 50 test kit contains 50 foil pouches, 50 Specimen Collection Loops, 50 Specimen Dilution Tubes.
• Both contain 2 dropper bottles of Blood Sample Buffer (5ml each).
• Each foil pouch contains one device (assay test strip), and a dessicant.

PERCENT ACCURACY
• Sensitivity: 100%
• Specificity: 100%

TYPES OF SAMPLES
• Serum, plasma, or whole blood

RUN TIME OF TEST
• 20 minutes
• Do not interpret the result after 45 minutes of beginning test.

PACKAGING INFORMATION
• 25 or 50 tests per kit

TEST KIT PACKAGE
25 tests per kit:
• Dimensions: 14 x 14 x 10 cm
• Volume: 1,960 cm³
• Weight: 400 g

50 tests per kit
• Dimensions: 14 x 18 x 13 cm
• Volume: 3.276 cm³
• Weight: 700 g

QUALITY CONTROL
• A procedural control is incorporated in the device. A control line in the Control Zone indicates a valid result. If the control line does not appear in the Control Zone, the test result is invalid, and the sample should be retested.
• Positive and negative kit controls should be run at the beginning of each shift. They should also be run whenever changing to a different lot of tests, or whenever testing conditions change (e.g., new location, lighting, temperature, etc.).

INDICATORS OF POTENTIAL QUALITY PROBLEMS
• Physical damage to shipping carton, inner box, or test kits
• Presence of foreign matter inside unit package
• Incorrect, missing, or illegible labeling (especially product, brand, or manufacturer’s name; lot and batch numbers; and expiration and/or manufacture date)
• Missing contents
• Leakage or stains
• Improper storage conditions

MATERIALS REQUIRED BUT NOT PROVIDED
• Watch or timer
• Sterile lancet or blood collection system
• Antiseptic wipe
• Sterile gauze pads
• Disposable gloves
• Biohazard disposal container

SHIPPING CARTON
