DHS Publications Catalog

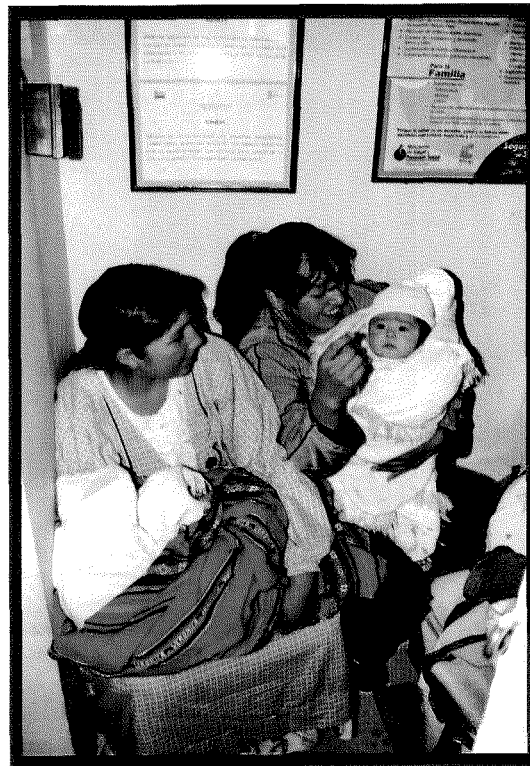

Fall 2005

About MEASURE DHS Publications

MEASURE DHS produces a wide variety of publications that provide country-specific, analytical, and comparative data on population, health, and nutrition in developing countries. Based on the results of the Demographic and Health Surveys (DHS), the publications provide timely baseline data for policy makers and program managers in survey countries, as well as population and health organizations and researchers throughout the world.

This catalog provides a listing of publications that are still in print and that have been produced since 1998. A full list of DHS publications can be found on our web site: www.measuredhs.com

Recent DHS and AIS Final Reports

DHS Final Reports, which are approximately 300 pages in length, are published 8-12 months after the completion of in-country fieldwork. They include comprehensive survey results on topics such as household and respondent characteristics, fertility and family planning, maternal and child health, nutrition, and HIV/AIDS. AIS Final Reports are much shorter (about 125 pages), and provide information on knowledge, attitudes, and behaviors regarding HIV/AIDS and may include HIV prevalence data. All reports are published in English unless otherwise noted. Please visit our web site for a full list of titles.

Analytical and Comparative Series

Analytical Studies and Reports *Analytical Studies and Reports emphasize policy and program-relevant themes and research questions. Although these analyses typically use DHS data from fewer countries than the comparative reports series, most are multi-country in approach to allow for broad interpretation.*

The Substitution of Contraception for Abortion in Kazakhstan in the 1990's	AS1
Gap between Preferred and Actual Birth Intervals in Sub-Saharan Africa: Implications for Fertility and Child Health	AS2
The Contraception-Fertility Link in Sub-Saharan Africa and in Other Developing Countries	AS4

Recent Trends in Abortion	AS8
Unintended Childbearing in Developing Countries: Levels, Trends, and Determinants	AR8
Change in the Desired Number of Children: A Cross Country Cohort Analysis of Levels and Correlates of Change	AR9

Comparative Studies and Reports *Comparative Studies and Reports compare findings from a number of developing countries to identify trends and patterns in important health and population indicators. The reports serve primarily as reference documents and typically draw on all available DHS data (and sometimes other data) collected over a recent period.*

Child Morbidity and Treatment Patterns	CS27
Fertility Levels, Trends and Differentials	CS28
Education	CS29
Breastfeeding and Complementary Infant Feeding/Postpartum Effects	CS30
